Topic 3	<ul style="list-style-type: none"> <li>Evaluation of Transportation Modes (Truck, Air, Rail, Water): This section of the exam measures skills of the Certified Logistics Technician and covers the ability to compare and select the most appropriate transportation methods based on factors like cost, speed, and the nature of the freight being moved.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Information Systems: This section of the exam measures skills of the Certified Logistics Associate and covers understanding and using the basic technology and software systems necessary to track, manage, and execute logistics operations, such as inventory or shipment records.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Measuring Weight &amp; Volume: This section of the exam measures skills of the Certified Logistics Technician and covers the technical computations needed to correctly size packages and calculate accurate weight and cubic volume for shipping costs and load planning.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Safe Handling of Hazardous Materials: This section of the exam measures skills of the Certified Logistics Technician and covers the specific regulations, documentation, and protective measures required for storing and moving dangerous goods safely.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>Product Receiving: This section of the exam measures skills of the Certified Logistics Technician and covers the technical procedures for inspecting, verifying, documenting, and correctly transferring incoming shipments of goods into storage facilities.</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>The Logistics Environment: This section of the exam measures skills of the Certified Logistics Associate and covers the standard operational setting, including the various facilities, equipment, and regulatory factors that affect daily logistics tasks.</li> </ul>
Topic 9	<ul style="list-style-type: none"> <li>Packaging and Shipping: This section of the exam measures skills of the Certified Logistics Technician and covers the necessary techniques for securing goods safely for transit, selecting the right containers, and correctly labeling them for outbound transportation.</li> </ul>

## MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q78-Q83):

### NEW QUESTION # 78

Which transportation mode is typically used for low-weight, high-value products such as electronics and jewelry?

- A. Rail
- B. Truck
- C. Air
- D. Water

**Answer: C**

Explanation:

Air transportation provides the fastest transit times and highest security, making it the preferred mode for low-weight, high-value, and time-sensitive products like electronics, pharmaceuticals, or jewelry. According to CLT 4.0, air freight is ideal when delivery speed outweighs cost concerns, as it minimizes exposure to loss or damage through reduced handling and transit duration. However, air is also the most expensive per-unit cost mode, limited by size and weight constraints. Air shipments typically integrate with just-in-time (JIT) and lean supply chains where quick replenishment is vital. Trucking often handles short-haul distribution; water offers low cost but slow speed; and rail suits heavy, bulk freight. Hence, CLT stresses selecting modes based on balancing cost, time, value density, and customer service needs.

#### NEW QUESTION # 79

Which of the following products require special handling and storage?

- A. refrigerated products
- B. canned food goods
- C. paper products
- D. shoes

**Answer: A**

Explanation:

Refrigerated products require specialized handling and storage due to temperature sensitivity and spoilage risk. The CLT "Safe Handling and Storage" section classifies temperature-controlled goods, including perishable foods and pharmaceuticals, as requiring cold chain management. This involves continuous monitoring, insulated containers, and precise environmental controls to maintain product quality and safety. Canned goods, paper, and footwear do not require such conditions. CLT emphasizes that handling refrigerated materials demands adherence to Food Safety Modernization Act (FSMA) and Good Distribution Practice (GDP) standards. Proper temperature verification, documentation, and equipment calibration are essential for compliance. Failure to maintain specified conditions can result in contamination, product loss, or legal violations, making refrigerated storage one of the most regulated areas in logistics.

#### NEW QUESTION # 80

Who is responsible for documentation for materials leaving the U.S.?

- A. EPA
- B. State Department
- C. Customs broker
- D. Freight forwarder

**Answer: D**

Explanation:

In international logistics, the freight forwarder is the party responsible for preparing and managing export documentation for goods leaving the United States. According to CLT 4.0, freight forwarders coordinate with exporters, carriers, and customs authorities to ensure compliance with export control laws, documentation accuracy, and transportation efficiency. Their tasks include completing commercial invoices, export declarations, bills of lading, and certificates of origin. Freight forwarders also select carriers, arrange cargo insurance, and book transport space, acting as intermediaries between exporters and international consignees. While customs brokers manage imports, freight forwarders specialize in exports-ensuring shipments meet the requirements of both the exporting and receiving countries. Accurate documentation from freight forwarders prevents customs delays, fines, and export violations, which are critical for maintaining legal and efficient trade flows.

#### NEW QUESTION # 81

A substance or material that is capable of posing an unreasonable risk to health, safety, and property when transported in commerce is

- A. PHMSA
- B. HAZCOM
- C. HAZMAT
- D. dangerous goods

**Answer: C**

Explanation:

CLT uses the U.S. term "hazardous material (HAZMAT)" for substances posing unreasonable risks in transportation; internationally the term "dangerous goods" is common. PHMSA is the regulating agency within USDOT, and HAZCOM refers to OSHA's Hazard Communication standard, not the material itself. Thus, the definition aligns with HAZMAT.

Reference:

#### NEW QUESTION # 82

Which of the following consists of component inventory used to feed into production or manufacturing lines?

- A. Finished goods
- **B. Raw material stock**
- C. Work-in-Progress (WIP)
- D. Just-In-Time (JIT)

**Answer: B**

Explanation:

Raw material stock refers to the unprocessed inputs stored for use in manufacturing. The CLT "Inventory Control" standards distinguish among three major categories: raw materials, work-in-progress (WIP), and finished goods. Raw materials are held in inventory to feed production lines, ensuring continuity of manufacturing operations. Effective management prevents production delays while avoiding overstock. CLT emphasizes that raw material inventories must be closely coordinated with procurement and production schedules-often managed through systems like MRP or JIT. Proper labeling, storage, and traceability of raw materials are vital for quality control and compliance with industry regulations. Unlike WIP (partially completed items), raw materials are inputs awaiting transformation into finished goods.

#### NEW QUESTION # 83

.....

Our CLT exam questions are based on the actual situation to stimulate exam circumstance in order to provide you a high-quality and high-efficiency user experience. In addition, the CLT exam guide function as a time-counter, and you can set fixed time to fulfill your task, so that promote your efficiency in real test. The key strong-point of our CLT Test Guide is that we impart more important knowledge with fewer questions and answers, with those easily understandable CLT study braindumps, you will find more interests in them and experience an easy learning process.
