NEW QUESTION # 471
A new vulnerability enables a type of malware that allows the unauthorized movement of data from a system.
Which of the following would detect this behavior?

- A. Using default settings
- B. Monitoring outbound traffic
- C. Implementing encryption
- D. Closing all open ports

Answer: B

NEW QUESTION # 472
During an assessment, an organization provides a penetration tester with a website URL and login credentials. However, the tester does not have access to the source code. Which of the following describes the type of test being performed?

- A. Obfuscated
- B. Unknown
- C. Partially known
- D. Known

Answer: C

Explanation:
The tester has some internal knowledge (valid credentials and target URL) but lacks full visibility into the application internals/source code. That limited insight falls squarely into gray/partially known testing, which blends external attacker perspective with select insider information to focus efforts efficiently.

NEW QUESTION # 473
A network manager wants to protect the company's VPN by implementing multifactor authentication that uses:
. Something you know

. Something you have
. Something you are
Which of the following would accomplish the manager's goal?

- A. Company URL, TLS certificate, home address
- B. Password, authentication token, thumbprint
- C. Domain name, PKI, GeoIP lookup
- D. VPN IP address, company ID, facial structure

Answer: B

Explanation:
The correct answer is C. Password, authentication token, thumbprint. This combination of authentication factors satisfies the manager's goal of implementing multifactor authentication that uses something you know, something you have, and something you are.
Something you know is a type of authentication factor that relies on the user's knowledge of a secret or personal information, such as a password, a PIN, or a security question. A password is a common example of something you know that can be used to access a VPN12 Something you have is a type of authentication factor that relies on the user's possession of a physical object or device, such as a smart card, a token, or a smartphone. An authentication token is a common example of something you have that can be used to generate a one-time password (OTP) or a code that can be used to access a VPN12 Something you are is a type of authentication factor that relies on the user's biometric characteristics, such as a fingerprint, a face, or an iris. A thumbprint is a common example of something you are that can be used to scan and verify the user's identity to access a VPN12

NEW QUESTION # 474
An administrator finds that all user workstations and servers are displaying a message that is associated with files containing an extension of .ryk. Which of the following types of infections is present on the systems?

- A. Virus
- B. Ransomware
- C. Spyware
- D. Trojan

Answer: B

Explanation:
Explanation
Ransomware is a type of malware that encrypts the victim's files and demands a ransom for the decryption key. The ransomware usually displays a message on the infected system with instructions on how to pay the ransom and recover the files. The .ryk extension is associated with a ransomware variant called Ryuk, which targets large organizations and demands high ransoms1.
