If the clients are satisfied with our Deep-Security-Professional study materials they can purchase them immediately. They can avoid spending unnecessary money and choose the most useful and efficient Deep-Security-Professional study materials.

Trend Micro Certified Professional for Deep Security Sample Questions (Q23-Q28):

NEW QUESTION # 23

The Overrides settings for a computer are displayed in the exhibit. Which of the following statements is true regarding the displayed configuration?

- A. The Protection Modules identified as Inherited in the exhibit have not yet been configured. Only the Web Reputation and Application Control Protection Modules have been configured.
- B. The configuration for the Protection Modules is inherited from the policy assigned to this computer, except for the configuration of the Web Reputation and Application Control Protection Modules which have been set at the computer level.
- C. The Web Reputation and Application Control Protection Modules have been assigned a different policy than the other Protection Modules and as a result, are displayed with overrides.
- D. The Protection Modules identified as Inherited in the exhibit have not yet been enabled. Only the Web Reputation and Application Control Protection Modules have been enabled at this point.

Answer: A

NEW QUESTION # 24

When viewing the details for a policy, as displayed in the exhibit, you notice that the Application Control Protection Module is not available. In this example, why would this Protection Modules not be available?

- A. The Application Control Protection Module has been disabled at the Base Policy level and is not displayed in the details for child policies.
- B. The Application Control Protection Modules has not been enabled for this tenant.
- C. An Activation Code for the Application Control Protection Module has not been provided. Unlicensed Protection Modules will not be displayed.
- D. The Application Control Protection Module is only supported on Linux computers, the policy details displayed are for Windows computers only.

Answer: C

Explanation:

testing-the-deep-security-modules

NEW QUESTION # 25

Where does Deep Security Manager store the credentials it uses to access the database?

- A. In the dsm.properties file
- B. In the database.properties file
- C. In the logging.properties file
- D. In the Windows Registry

Answer: A

NEW QUESTION # 26

Which of the following statements correctly identifies the purpose of the Integrity Monitoring Protection Module?

- A. The Integrity Monitoring Protection Module monitors critical operating system objects such as services, processes, registry keys and ports to detect and report malicious or unexpected changes.
- B. The Integrity Monitoring Protection Module monitors and analyzes the integrity of application logs to identify tampering, corruption and other suspicious modifications to the logs.
- C. The Integrity Monitoring Protection Module monitors traffic to verify the integrity of incoming traffic to identify protocol deviations, packets fragments and other protocol anomalies.
- D. The Integrity Monitoring Protection Module monitors incoming traffic to confirm the integrity of header information including packet source and destination details.

Answer: A

Explanation:

The Integrity Monitoring module is designed to watch over key OS objects-such as files, registry keys, processes, and ports-and

detect/report unauthorized or unexpected changes for compliance and security auditing.

NEW QUESTION # 27

Which of the following statements is true regarding the Log Inspection Protection Module?

- **A. Deep Security Agents forward Log Inspection Event details to Deep Security Manager in real time.**
- B. Log Inspection can only examine new Events and cannot examine logs entries created before the Protection Module was enabled.
- C. Log Inspection can only examine Deep Security log information.
- D. The Log Inspection Protection Module is supported in both Agent-based and Agentless implementations.

Answer: A

Explanation:

Deep Security Agents collect log inspection events and forward them to the Deep Security Manager in real time for centralized analysis and alerting. This allows for prompt detection and response to security-relevant log events.
