BootcampPDF always provides customer support for the convenience of desktop Cisco 200-201 practice test software users. The Cisco 200-201 certification provides both novices and experts with a fantastic opportunity to show off their knowledge of and proficiency in carrying out a particular task. You can benefit from a number of additional benefits after completing the Cisco 200-201 Certification Exam.

Main Exam Objectives

The Cisco CBROPS test validates your knowledge of 5 major cybersecurity knowledge areas. These include security concepts, monitoring security, network intrusion analysis, hot-based analysis, and security policies as well as procedures. By verifying your mid-level cybersecurity skills with this certificate, you will be confirming your associate-level mastery of important concepts to help you identify and manage security threats.

200-201 Valid Test Pdf - 200-201 Certification Dumps

If you fail to get success in the Cisco 200-201 test, you can claim your money back according to some terms and conditions. If you want to practice offline, use our Cisco 200-201 desktop practice test software. Windows computers support this software. The 200-201 web-based practice exam is compatible with all browsers and operating systems.

The Understanding Cisco Cybersecurity Operations Fundamentals (200-201) exam is designed to assess the knowledge and skills required to understand the basics of cybersecurity operations. 200-201 exam is for those who are interested in pursuing a career in cybersecurity and want to have a good understanding of the fundamentals of cybersecurity operations. 200-201 Exam is also suitable for those who are already working in the field and want to validate their knowledge and skills.

Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q349-Q354):

NEW QUESTION # 349
Which security monitoring data type is associated with application server logs?

- A. alert data
- B. transaction data
- C. statistical data
- D. session data

Answer: B

NEW QUESTION # 350
What is the purpose of command and control for network-aware malware?

- A. It controls and shuts down services on the infected host.
- B. It contacts a remote server for commands and updates
- C. It helps the malware to profile the host
- D. It takes over the user account for analysis

Answer: B

Explanation:
The purpose of command and control (C&C) for network-aware malware is to allow an attacker to remotely control compromised systems. This includes sending commands to the malware, receiving data from the infected host, and updating the malware to evade detection or enhance its capabilities.
References: The CBROPS course materials cover the topic of network-aware malware and the role of command and control servers in managing such malware

NEW QUESTION # 351
What is a scareware attack?

- A. gaming access to your computer and encrypting data stored on it
- B. overwhelming a targeted website with fake traffic
- C. inserting malicious code that causes popup windows with flashing colors
- D. using the spoofed email addresses to trick people into providing login credentials

Answer: C

Explanation:
Scareware is a type of malware attack that tricks users into believing their computer is infected with a virus, prompting them to download and pay for fake antivirus software. The attack often uses popup windows with flashing colors (D) to create a sense of urgency and scare the user into taking immediate action.

NEW QUESTION # 352
A developer is working on a project using a Linux tool that enables writing processes to obtain these required results:
If the process is unsuccessful, a negative value is returned.
If the process is successful, 0 value is returned to the child process, and the process ID is sent to the parent process.
Which component results from this operation?

- A. parent directory name of a file pathname
- B. process spawn scheduled
- C. macros for managing CPU sets
- D. new process created by parent process

Answer: D

Explanation:
The operation described is characteristic of the fork() system call in Linux, which is used to create a new process. The fork() system call generates a new process by duplicating the calling (parent) process. If the fork() is successful, the PID of the child process is returned to the parent process, and a 0 value is returned to the child process. If unsuccessful, a negative value is returned2.

How to create a process in Linux? - Online Tutorials Library

NEW QUESTION # 353
How does an SSL certificate impact security between the client and the server?

- A. by creating an encrypted channel between the client and the server
- B. by enabling an authorized channel between the client and the server
- C. by enabling an authenticated channel between the client and the server
- D. by creating an integrated channel between the client and the server

Answer: A

Explanation:
An SSL certificate enables the establishment of a secure connection between the client and the server using the TLS protocol. The client and the server exchange keys and agree on a cipher suite to encrypt and decrypt the data transmitted over the network.
