**Salesforce AP-211 Reliable Dump, AP-211 Test Vce Free**

We have considered that your time may be very tight, and you can only use some fragmented time to learn. Therefore, it is really important to be able to read our AP-211 study materials anytime, anywhere. So we have developed our AP-211 exam questions to three different versions: the PDF, Software and APP online. They have covered all conditions that you will be in to study on our AP-211 learning guide. For example, the time you want to study on phone, computer, laptop, paper and so on.

## Salesforce Health Cloud Accredited Professional Sample Questions (Q77-Q82):

### NEW QUESTION # 77

Bloomington Caregivers wants to show its end users highlighted information about its providers that work at specific facilities, in one place. This would include provider contact details and the provider's specialty at a given facility.

Which Health Cloud feature should a consultant implement to fulfill this requirement?

- A. Facility Relationship Center
- B. HCPProvider360 FlexCard
- C. Provider Relationship Card
- D. Provider Network Management

**Answer: C**

### NEW QUESTION # 78

A UX designer wants to change the formatting of an OmniStudio FlexCard field element to have a font of Times New Roman with a red color.

What are two ways the designer should make the changes?

Choose 2 answers

- A. Make edits to Field Style.
- B. Made edits to Setup Panel.
- C. write custom CSS,
- D. Make edits to Field Properties.

**Answer: A,C**

Explanation:

In OmniStudio FlexCards, when you want to change the visual styling of a field element (e.g., font type, font color, formatting), you have two main options:

A . Write custom CSS

OmniStudio FlexCards allow applying custom CSS classes for fine-grained control of styles.

This is how you can specify a font like Times New Roman or apply a red color.

B . Make edits to Field Style

The Field Style editor within the FlexCard Designer lets you directly configure basic styling properties (like text color, background, alignment, etc.) without needing custom CSS.

Why not the others?

C . Make edits to Setup Panel - The Setup Panel is for data source, conditions, and layout configuration, not for styling individual fields.

D . Make edits to Field Properties - Field Properties are used to configure which data is displayed and how it behaves (like label, formatting rules, or conditional display), but styling is handled through Field Style or CSS, not properties.

Salesforce OmniStudio Reference:

Salesforce OmniStudio FlexCard Designer Guide

"You can use the Field Style editor to set basic styles, such as font color and alignment."

"For advanced customization, apply custom CSS classes to field elements."

### NEW QUESTION # 79

While a consultant is implementing Integrated Care Management for a customer, the customer requests that a change is made to the Care Plan creation wizard.

Which underlying component should the consultant customize to achieve this?

- A. FlexCard

- B. Field Sets
- C. Flow
- D. OmniScript

**Answer: C**

### NEW QUESTION # 80

A developer needs to modify the out-of-the-box advanced Patient Card to display the Category, SubjectID, and Date for active Clinical Alerts.

Which three steps should the developer take to accomplish this?

Choose 3 answers

- A. Define session variables to control visibility of clinical data.
- B. Create a DataRaptor to extract necessary data.
- C. Create and activate a new child card.
- D. Change the child card state to show active
- E. Clone the parent card

**Answer: B,C,E**

Explanation:

The Advanced Patient Card in Health Cloud is a FlexCard-based UI component that can be extended to show more patient context, such as Clinical Alerts. To display additional fields (Category, SubjectID, Date for active alerts), the developer should:

A . Clone the parent card

Best practice is to clone the delivered parent Patient Card rather than edit it directly, so you preserve the Salesforce-provided baseline functionality.

B . Create and activate a new child card

Child cards display specific contextual data (such as Clinical Alerts).

To customize which fields show, you create a new child card and activate it.

C . Create a DataRaptor to extract necessary data

Clinical Alert data must be pulled from Health Cloud objects.

A DataRaptor Extract retrieves the required fields (Category, SubjectID, Date) for use in the FlexCard child component.

Why not the others?

D . Define session variables to control visibility of clinical data - Session variables can control context in OmniStudio, but they aren't required just to display fields on the Patient Card.

E . Change the child card state to show active - Card states are used for conditional rendering (loading, error, empty states).

Showing active alerts requires data filtering in the DataRaptor, not card state changes.

Salesforce Health Cloud Reference:

Salesforce Health Cloud - Advanced Patient Card

"Clone the Advanced Patient Card to customize it while preserving the delivered version."

"Use child cards to display detailed data such as conditions, medications, or clinical alerts."

"Retrieve data for FlexCards with DataRaptor Extracts."

### NEW QUESTION # 81

Bloomington Caregivers needs to migrate Health Condition records from its previous org with International Classification of Diseases (ICD) information.

Which two objects should an administrator load with data prior to migrating this information, to ensure a successful data load?

Choose 2 answers

- A. Account
- B. code set
- C. Clinical Encounter
- D. Healthcare Diagnosis

**Answer: A,B**

### NEW QUESTION # 82
