New JN0-224 Exam Notes - JN0-224 New Dumps Questions

The reality is often cruel. What do we take to compete with other people? More useful certifications like Juniper certificate? Perhaps the few qualifications you have on your hands are your greatest asset, and the JN0-224 test prep is to give you that capital by passing JN0-224 Exam fast and obtain certification soon. Don't doubt about it. More useful certifications mean more ways out. If you pass the JN0-224 exam, you will be welcome by all companies which have relating business with JN0-224 exam torrent.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which two statements are correct about a Python list data type? (Choose two.)

- A. The data contained in a list data type is sequenced and indexed starting from 0.
- B. The data contained in a list data type can be modified.
- C. The data contained in a list data type cannot be modified.
- D. The data contained in a list data type is not sequenced or indexed.

Answer: A,B

Explanation:

Python lists have the following characteristics:

Modifiable Data (A): Lists are mutable, meaning you can change, add, or remove elements after the list has been created.

Sequenced and Indexed (B): Lists maintain the order of their elements and are indexed starting from 0. This means you can access elements by their position in the list.

Option C is incorrect because lists are mutable, allowing modifications. Option D is incorrect because lists are indeed sequenced and indexed, unlike dictionaries.

Reference:

Python Official Documentation: Covers the properties of lists, including mutability and indexing.

Python Data Structures Guide: Explains list operations and how to manipulate them.

NEW QUESTION # 49

Which two statements are correct about a Python dictionary data type? (Choose two.)

- A. The data contained in a dictionary data type is a key/value pair.
- B. The data stored in a dictionary data type is not sequenced or indexed.
- C. The data contained in a dictionary data type cannot be removed once the dictionary has been created.
- D. The data stored in a dictionary data type is sequenced and indexed.

Answer: A,B

Explanation:

A Python dictionary is a data type that stores data in the form of key/value pairs. It has the following characteristics:

Key/Value Pair (C): Each entry in a dictionary is a pair consisting of a unique key and a value. The key is used to access the corresponding value.

Not Sequenced or Indexed (D): Unlike lists or tuples, dictionaries do not maintain order for their entries (in versions prior to Python 3.7). Even though Python 3.7+ maintains insertion order, dictionaries are not considered indexed or sequenced in the traditional sense like lists, where elements are accessed via positional index.

Option A is incorrect because dictionary entries can be added, modified, or removed after the dictionary is created. Option B is incorrect because dictionaries are not accessed by a numeric index but rather by their keys.

Reference:

Python Official Documentation: Details the nature of dictionaries, including their mutability and key/value structure.

Python Data Structures Guide: Explains dictionary operations and characteristics.

NEW QUESTION # 50

What is the correct Python script syntax to prompt for input?

- A. hostIP = input"Device IP address: "
- B. hostIP = input{Device IP address: }
- C. input("Device IP address: ") = hostIP
- D. hostIP = input("Device IP address: ")

Answer: D

Explanation:

In Python, the correct syntax to prompt the user for input and store that input in a variable is:

`input(prompt):` The `input()` function is used to take input from the user. The string provided as an argument (inside the parentheses) is displayed as a prompt to the user. The input provided by the user is returned as a string and can be stored in a variable.

Example:

```
hostIP = input("Device IP address: ")
```

In this example, "Device IP address: " is the prompt displayed to the user, and the user's input will be stored in the variable `hostIP`.

Options B, C, and D are syntactically incorrect in Python.

Reference:

Python Official Documentation: Describes the use of the `input()` function for getting user input.

Python Tutorials: Various tutorials demonstrate how to properly use the `input()` function in scripts.

NEW QUESTION # 51

Which HTTP status code indicates a response to a successful request?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Explanation

Reference: https://www.juniper.net/documentation/en_US/junos-space-sdk/13.1/apiref/com.juniper.junos_space.sdk.help/html/reference/Commonbehav.html

NEW QUESTION # 52

Which two tools would you use to make REST API requests? (Choose two.)

- A. SSH
- B. NETCOFF
- C. cURL
- D. Web browser

Answer: C,D

Explanation:

REST API requests can be made using various tools that support HTTP methods. Two common tools are:

cURL: A command-line tool that allows you to send HTTP requests, including GET, POST, PUT, and DELETE. It is widely used for testing and interacting with RESTful APIs due to its simplicity and flexibility.

Web Browser: Modern web browsers can be used to send HTTP GET requests directly by entering the URL into the address bar. Additionally, browser extensions like Postman or built-in developer tools can be used to construct and send more complex REST API requests.

Option B (NETCOFF) is incorrect as it does not refer to a standard tool for making REST API requests.

Option D (SSH) is incorrect because SSH is a protocol used for secure remote login and command execution, not for sending REST API requests.

Supporting Reference:

cURL Documentation: Official cURL documentation provides extensive information on how to use cURL to interact with REST APIs.

Web Development and REST API Guides: Many web development resources and REST API documentation recommend using web browsers and tools like cURL for testing and interacting with APIs.

NEW QUESTION # 53

.....

Perhaps you agree that strength is very important, but there are doubts about whether our JN0-224 study questions can really improve your strength. It does not matter, we can provide you with a free trial version of our JN0-224 exam braindumps. You can free download the demos of our JN0-224 learning prep easily on our website, and there are three versions according to the three

versions of our JN0-224 practice engine. It is really as good as we say, you can experience it yourself.
