Salesforce Sharing-and-Visibility-Architect exam is designed for professionals who want to demonstrate their expertise in designing and implementing complex sharing and visibility solutions in Salesforce. Salesforce Certified Sharing and Visibility Architect certification is intended for architects who have a deep understanding of Salesforce's sharing and visibility model and can guide organizations in making decisions regarding sharing and visibility. Sharing-and-Visibility-Architect exam is a proctored, multiple-choice test that evaluates a candidate's knowledge of topics such as sharing rules, manual sharing, role hierarchies, sharing sets, and territory management.

Salesforce Sharing-and-Visibility-Architect certification is a valuable credential that can help you advance your career as a Salesforce architect. Salesforce Certified Sharing and Visibility Architect certification demonstrates your expertise in managing data security and sharing settings, which are critical skills for any Salesforce architect. Salesforce Certified Sharing and Visibility Architect certification can also help you stand out from other Salesforce architects and increase your earning potential.

Salesforce Certified Sharing and Visibility Architect Exam is designed to test an individual's understanding of sharing and visibility in

Salesforce. It is a proctored, multiple-choice exam that takes approximately 120 minutes to complete. Sharing-and-Visibility-Architect Exam covers topics such as sharing rules, record-level security, and data access.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q53-Q58):

NEW QUESTION # 53

A banking company uses a VIP Flag in the Contact Object that they want only Private Banking Reps to see. Which approach is recommended to meet this requirement?

- A. Change the type of VIP Flag field to a picklist, define a new record type for the Contact Object and make the picklist field available for Editing.
- B. Define a page layout for Contact Object and add the VIP Flag field for that layout. Remove the VIP Flag field from other layouts.
- C. Set the Field Level Security for the VIP Flag field so that it is visible to Private Banking Rep Profile.

Answer: C

Explanation:

Field-Level Security (FLS) is the most secure and efficient method to restrict visibility of sensitive fields like the VIP Flag to specific user groups or profiles. FLS is applied at the field level, ensuring that users who lack permission cannot view, edit, or access the field, regardless of the sharing or page layout configurations.

* Option A: Changing the field type to a picklist and using record types unnecessarily complicates the solution. Record types are typically used for different business processes, not for field-level security.

* Option B: Using page layouts restricts visibility on the UI but doesn't secure the field from API or report-level access. Users with access to the object could still retrieve the field's data.

* Option C: Setting FLS ensures that the field is hidden everywhere it appears (e.g., UI, reports, APIs) for all profiles except the Private Banking Rep Profile. This is the most effective and Salesforce- recommended method for sensitive data control.

Best Practices for Securing Sensitive Data

NEW QUESTION # 54

By Viewer Access you can see the data in a report or dashboard, but you can't make any changes, except by cloning it into a new report or dashboard.

- A. True
- B. False

Answer: A

NEW QUESTION # 55

Sales Reps at Universal Containers sometimes create large files as a part of the Sales process that are too large to share over email. They would like users to be able to share files with customers, but the CISO has requested that any file links shared must be protected by a password.

How can this be accomplished?

- A. Sales reps can create a content delivery. During creation, the user should select the option to require a password to access content.
- B. Set up an experience cloud site for customers to access files. Share the file with customers via chatter. Customers can then log into the site to access the content.
- C. Utilize an AppExchange product for delivering password-protected files to their customers,

Answer: A

NEW QUESTION # 56

Who can view a PDF that is uploaded to the Files Home private library by a user?

- A. The user and users above them in the Role Hierarchy
- B. The user and users with View All Data permission
- C. Only the user

Answer: C

Explanation:

Files uploaded to a user's private library in Salesforce Files Home are strictly private and visible only to the user who uploaded them. Even users with elevated permissions, such as those with "View All Data" access, or users higher in the Role Hierarchy, cannot view these files. This ensures the utmost privacy for files stored in a private library.

- * Option A: Role Hierarchy does not affect access to files stored in a private library.
- * Option B: "View All Data" does not grant access to files in private libraries.
- * Option C (Correct): Only the user who uploaded the file can view it in their private library.

File Privacy and Sharing

NEW QUESTION # 57

Universal Containers has requirement for the Architect to develop Apex Managed Sharing code for the custom Job object. The sharing settings for the Job object are set to Private.

When assigning access level for the record, which two lines of code will cause a DML exception on insert to the database? Choose 2 answers

- A. `ObjectName.AccessLevel='None'`
- B. `ObjectName.AccessLevel='Edit'`
- C. `ObjectName.AccessLevel='All'`
- D. `ObjectName.AccessLevel='Read'`

Answer: A,C

NEW QUESTION # 58

.....
