Identity-and-Access-Management-Architect Questions

There are different versions of our Identity-and-Access-Management-Architect learning materials: the PDF, Software and APP online versions. Whether you like to study on the computer or like to read paper materials, our Identity-and-Access-Management-Architect learning materials can meet your needs. If you are used to reading paper with our Identity-and-Access-Management-Architect Study Materials for most of the time, you can eliminate your concerns. Our Identity-and-Access-Management-Architect exam quiz takes full account of customers' needs in this area.

Salesforce Certified Identity and Access Management Architect certification exam is a valuable credential that can help professionals showcase their expertise in the areas of identity and access management. Salesforce Certified Identity and Access Management Architect certification is widely recognized in the industry and is highly valued by employers. Candidates who successfully Pass Identity-and-Access-Management-Architect Exam will be able to demonstrate their knowledge, skills, and expertise in the areas of identity and access management, and will be able to design, implement, and manage identity and access management solutions that meet business needs.

To earn this certification, candidates must demonstrate their knowledge and skills in various areas, including identity architecture design, access management, data security, and governance. Successful candidates will also have experience with Salesforce's Identity and Access Management (IAM) solutions, such as SSO, OAuth, and Identity Connect.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q108-Q113):

NEW QUESTION # 108

Universal Containers wants to implement Single Sign-on for a Salesforce org using an external Identity Provider and corporate identity store.

What type of authentication flow is required to support deep linking?

- A. Web Server OAuth SSO flow
- B. Identity-Provider-initiated SSO
- **C. Service-Provider-Initiated SSO**
- D. StartURL on Identity Provider

Answer: C

NEW QUESTION # 109

What information does the 'Relaystate' parameter contain in sp-Initiated Single Sign-on?

- A. Reference to the login address URL of the service provider.
- B. Reference to a URL redirect parameter at the identity provider.
- **C. Reference to a URL redirect parameter at the service provider.**
- D. Reference to the login address URL of the identity Provider.

Answer: C

Explanation:

The 'Relaystate' parameter is an HTTP parameter that can be included as part of the SAML request and SAML response. In an SP-initiated sign-in flow, the SP can set the RelayState parameter in the SAML request with additional information about the request, such as the URL of the resource that the user is trying to access.

The IDP should just relay it back in the SAML response without any modification or inspection. Therefore, the 'Relaystate' parameter contains a reference to a URL redirect parameter at the service provider¹²³.

NEW QUESTION # 110

Universal Containers (UC) wants to integrate a third-party Reward Calculation system with Salesforce to calculate Rewards. Rewards will be calculated on a schedule basis and update back into Salesforce. The integration between Salesforce and the

Reward Calculation System needs to be secure. Which are two recommended practices for using OAuth flow in this scenario. choose 2 answers

- A. OAuth SAML Bearer Assertion Flow
- B. OAuth Refresh Token Flow
- C. OAuth Username-Password Flow
- D. OAuth JWT Bearer Token Flow

Answer: A,D

Explanation:

OAuth is an open-standard protocol that allows a client app to access protected resources on a resource server, such as Salesforce API, by obtaining an access token from an authorization server. OAuth supports different types of flows, which are ways of obtaining an access token. For integrating a third-party Reward Calculation system with Salesforce securely, two recommended practices for using OAuth flow are:

* OAuth SAML Bearer Assertion Flow, which allows the client app to use a SAML assertion issued by a trusted identity provider to request an access token from Salesforce. This flow does not require the client app to store any credentials or secrets, and leverages the existing SSO infrastructure between Salesforce and the identity provider.

* OAuth JWT Bearer Token Flow, which allows the client app to use a JSON Web Token (JWT) signed by a private key to request an access token from Salesforce. This flow does not require any user interaction or consent, and uses a certificate to verify the identity of the client app.

NEW QUESTION # 111

A large consumer company is planning to create a community and will require login through the customer's social identity. The following requirements must be met:

1. The customer should be able to login with any of their social identities, however Salesforce should only have one user per customer.
2. Once the customer has been identified with a social identity, they should not be required to authorize Salesforce.
3. The customer's personal details from the social sign-on need to be captured when the customer logs into Salesforce using their social identity.
3. If the customer modifies their personal details in the social site, the changes should be updated in Salesforce.

Which two options allow the Identity Architect to fulfill the requirements?

Choose 2 answers

- A. Use Login Flows to call an authentication registration handler to provision the user before logging the user into the community.
- B. Use the custom registration handler to link social identities to Salesforce identities.
- C. Use authentication providers for social sign-on and use the custom registration handler to insert or update personal details.
- D. Redirect the user to a custom page that allows the user to select an existing social identity for login.

Answer: B,C

Explanation:

To allow customers to log in to the community with any of their social identities, such as Facebook, Google, or Twitter, the identity architect needs to use authentication providers for social sign-on. Authentication providers are configurations that enable users to authenticate with an external identity provider and access Salesforce resources. To ensure that Salesforce has only one user per customer, regardless of how many social identities they have, the identity architect needs to use the custom registration handler to link social identities to Salesforce identities. The custom registration handler is a class that implements the Auth.

RegistrationHandler interface and defines how to create or update users in Salesforce based on the information from the external identity provider. The custom registration handler can also be used to insert or update personal details of the customers when they log in to Salesforce using their social identity.

NEW QUESTION # 112

An organization has a central cloud-based Identity and Access Management (IAM) Service for authentication and user management, which must be utilized by all applications as follows:

- 1 - Change of a user status in the central IAM Service triggers provisioning or deprovisioning in the integrated cloud applications.

2 - Security Assertion Markup Language single sign-on (SSO) is used to facilitate access for users authenticated at identity provider (Central IAM Service).

Which approach should an IAM architect implement on Salesforce Sales Cloud to meet the requirements?

- A. Configure central IAM Service as an authentication provider and extend registration handler to manage provisioning and deprovisioning of users.
- B. Configure Salesforce as a SAML service provider, and enable Just-In Time (JIT) provisioning and deprovisioning of users.
- C. Deploy Identity Connect component and set up automated provisioning and deprovisioning of users, as well as SAML-based SSO.
- **D. Configure Salesforce as a SAML Service Provider, and enable SCIM (System for CrossDomain Identity Management) for provisioning and deprovisioning of users.**

Answer: D

NEW QUESTION # 113

.....

There are three different Salesforce Identity-and-Access-Management-Architect questions format that is being provided to applicants from CramPDF. Anyone can download a free Identity-and-Access-Management-Architect exam dumps demo to evaluate this product before shopping. These Salesforce Certified Identity and Access Management Architect (Identity-and-Access-Management-Architect) latest questions formats are Salesforce Identity-and-Access-Management-Architect PDF dumps format, web-based Salesforce Certified Identity and Access Management Architect (Identity-and-Access-Management-Architect) practice tests, and desktop-based Salesforce Identity-and-Access-Management-Architect practice test software is provided to customers.
