

C_SEC_2405 Neuesten und qualitativ hochwertige Prüfungsmaterialien bietet - quizfragen und antworten

2026 Die neuesten ZertSoft C_SEC_2405 PDF-Versionen Prüfungsfragen und C_SEC_2405 Fragen und Antworten sind kostenlos verfügbar: <https://drive.google.com/open?id=1sXhV-4FBVS47CnOpP3L7PZZbuMRiVDwy>

ZertSoft ist eine Website voller Zuversicht. Die IT-Profis von ZertSoft widmen sich der Studie der vielfältigen IT-Zertifizierungsprüfungen, um die Effektivität der Erfolg der SAP C_SEC_2405 Zertifizierungsprüfungen zu verbessern. Solange Sie einmal ZertSoft Unterlagen probieren, wollen Sie unbedingt sie wieder benutzen, weil wir ZertSoft nicht nur Ihnen die besten SAP C_SEC_2405 Zertifizierungsunterlagen, sondern auch den besten Service anbieten. Wenn Sie irgendwelche Meinungen haben, senden Sie bitte ihre Vorschläge an uns per E-Mail. Wir hoffen, wir helfen Kadidaten Erfolg machen und auch bieten den besten Service.

SAP C_SEC_2405 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
Thema 2	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.
Thema 3	• Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.

C_SEC_2405 Pass4sure Dumps & C_SEC_2405 Sichere Praxis Dumps

Mit Hilfe der Schulungsunterlagen zur SAP C_SEC_2405 Zertifizierungsprüfung können Sie ganz schnell und leicht die Prüfung bestehen. Das haben viele Kandidaten uns gesagt. Mit den Schulungsunterlagen zur SAP C_SEC_2405 Zertifizierungsprüfung können Sie Ihre Gedanken ordnen und sich ganz gelassen auf die Prüfung vorbereiten. Das reduziert nicht nur Stress, sonder hilft Ihnen, die SAP C_SEC_2405 Prüfung zu bestehen. ZertSoft hat auch kostenlose Fragen und Antworten als Probe. Meines Erachtens nach können Sie die Demo zuerst benutzen, dann wird sie Ihnen ganz passen. Sie werden selber ihre Wirkung kennen.

SAP Certified Associate - Security Administrator C_SEC_2405 Prüfungsfragen mit Lösungen (Q75-Q80):

75. Frage

What is required to centrally administer a user's master record using Central User Administration? Note: There are 3 correct answers to this question.

- A. An entry in transaction BD54 for the child system
- B. An ALE distribution model
- C. An existing master record in the target client for the user
- D. An RFC destination to the target client
- E. An RFC destination to the target system

Antwort: A,B,E

76. Frage

Which cybersecurity type does NOT focus on protecting connected devices?

- A. Cloud security
- B. Application security
- C. Network security
- D. IoT security

Antwort: B

Begründung:

* Understanding the Context: Cybersecurity encompasses various domains to secure systems, networks, and data. Some types, however, focus on specific aspects such as devices, cloud systems, or applications.

* Type Definitions:

* A. Cloud Security: Primarily targets protecting cloud environments, services, and data stored in the cloud. It ensures safe interactions and data security between connected devices and cloud systems.

* B. Application Security: This type concentrates on protecting software applications from vulnerabilities or threats such as unauthorized access, code manipulation, and data leaks. It does not directly emphasize securing connected devices.

* C. Network Security: Focuses on securing the underlying network infrastructure, preventing unauthorized access, and ensuring data integrity during device communications.

* D. IoT (Internet of Things) Security: Specifically aims to safeguard connected devices and their ecosystems against threats like unauthorized access, firmware tampering, and botnet attacks.

* Why the Answer is B: Application security primarily involves securing code, user interfaces, and data within the application itself. It does not extend its scope to connected devices like IoT security or network systems. Other types, such as cloud security and network security, directly or indirectly protect connected devices due to their reliance on these infrastructures.

* SAP-Specific Context: In SAP systems, ensuring application security would involve securing ABAP code, enforcing robust authorization concepts, and applying patches and upgrades to SAP applications.

This, however, does not specifically focus on IoT devices or their interaction.

77. Frage

How does Rapid Activation support customers during the SAP S/4HANA on-premise implementation process? Note: There are 3 correct answers to this question.

- A. By helping customers to start exploring SAP Fiori in SAP S/4HANA on premises as quickly as possible.
- B. By allowing customers to select individual SAP Fiori apps for their end-to-end business processes.
- C. By supporting content activation at the business role level, including SAP Fiori apps and all associated Web Dynpro for ABAP applications.
- D. By allowing customers to select and activate SAP Fiori apps one by one, independent of dependencies needed for app-to-app navigation.
- E. By reducing the SAP Fiori activation effort during the Explore phase of SAP Activate.

Antwort: A,C,E

Begründung:

Rapid Activation in SAP S/4HANA on-premise streamlines the implementation process by reducing the SAP Fiori activation effort during the Explore phase of SAP Activate, enabling faster setup and testing of Fiori apps. It supports content activation at the business role level, automatically activating SAP Fiori apps and associated Web Dynpro for ABAP applications linked to a role, ensuring a cohesive user experience without manual configuration. Additionally, Rapid Activation helps customers start exploring SAP Fiori quickly, providing preconfigured content that accelerates the transition to the Fiori interface. However, it does not allow selecting and activating Fiori apps individually without considering dependencies (option D), as apps often require related services for navigation. Similarly, while it supports business processes, it does not focus on selecting individual apps for end-to-end processes (option E), as activation is role-based. These features make Rapid Activation a valuable tool for efficient Fiori deployment, enhancing user adoption and system readiness during implementation.

78. Frage

Which code does the authority-check return when a user does NOT have any authorizations for the authorization object checked?

- A. 0
- **B. 1**
- C. 2
- D. 3

Antwort: B

Begründung:

In SAP systems, the authority-check statement evaluates whether a user has the required authorizations for a specific authorization object. When a user does not have any authorizations for the checked object, the system returns a return code (SY-SUBRC) of 0. This indicates that the authorization check has failed, meaning the user lacks the necessary permissions to perform the requested action. The return code 0 is a standard indicator in ABAP programming for authorization failures, prompting the system to deny access or trigger an error message. Other return codes, such as 4, 12, or 16, may indicate different scenarios, like partial authorization or specific check conditions, but they are not applicable when no authorizations exist. Understanding this return code is crucial for developers and administrators to handle authorization errors effectively, ensuring that access control is enforced consistently across SAP applications. This mechanism supports SAP's robust security model, preventing unauthorized actions and maintaining system integrity.

79. Frage

Which cloud-based SAP solution helps organizations control their data across various cloud platforms and on-premise data sources?

- **A. SAP Data Custodian**
- B. SAP Information Steward
- C. SAP Identity Access Governance
- D. SAP Privacy Governance

Antwort: A

80. Frage

.....

Die Zertifikat der SAP C_SEC_2405 ist international anerkannt. Sie zu erwerben bedeutet, dass Sie den Schlüssel zur höheren Stelle besitzen. Die SAP C_SEC_2405 Prüfungsunterlagen von ZertSoft werden von erfahrenen IT-Profis herstellt und immer wieder aktualisiert. Jetzt können Sie mit günstigem Preis die verlässliche SAP C_SEC_2405 Prüfungsunterlagen genießen. Nachdem Sie die Zertifizierung erwerbt haben, können Sie leicht eine höhere Arbeitsposition oder Gehalten bekommen.
