

Latest Mule-Dev-301 free braindumps & Salesforce Mule-Dev-301 valid exam - Mule-Dev-301 valid braindumps

P.S. Free & New Mule-Dev-301 dumps are available on Google Drive shared by Actual4Exams: <https://drive.google.com/open?id=1B7npDI2YF-Jmahncy2Sa7O-iEzdhyW4>

Just as I have just mentioned, almost all of our customers have passed the exam as well as getting the related certification easily with the help of our Mule-Dev-301 exam torrent, we strongly believe that it is impossible for you to be the exception. So choosing our Salesforce Certified MuleSoft Developer II exam question actually means that you will have more opportunities to get promotion in the near future, at the same time, needless to say that you will get a raise in pay accompanied with the promotion. What's more, when you have shown your talent with Salesforce Certified MuleSoft Developer II certification in relating field, naturally, you will have the chance to enlarge your friends circle with a lot of distinguished persons who may influence you career life profoundly. So why are you still hesitating for purchasing our Mule-Dev-301 Guide Torrent? Your bright future is starting from here!

Salesforce Mule-Dev-301 Exam Syllabus Topics:

Section	Objectives
Topic 1: DataWeave and Data Transformation	- Mapping, filtering, and payload manipulation - DataWeave scripting and transformations
Topic 2: Error Handling and Troubleshooting	- Exception handling strategies in Mule applications - Debugging and logging techniques
Topic 3: Security and Governance	- Authentication and authorization mechanisms - API policies and security enforcement
Topic 4: Integration and API-led Connectivity	- System, Process, and Experience APIs design - API-led connectivity principles
Topic 5: Deployment and Testing	- Deployment strategies across environments - Unit testing and integration testing approaches
Topic 6: Anypoint Platform Development	- Anypoint Studio usage and project structure - Mule application development

New Salesforce Mule-Dev-301 Exam Questions - Mule-Dev-301 Reliable Exam Practice

With the development of economic globalization, your competitors have expanded to a global scale. Obtaining an international Mule-Dev-301 certification should be your basic configuration. What I want to tell you is that for Mule-Dev-301 Preparation materials, this is a very simple matter. And as we can claim that as long as you study with our Mule-Dev-301 learning guide for 20 to 30 hours,

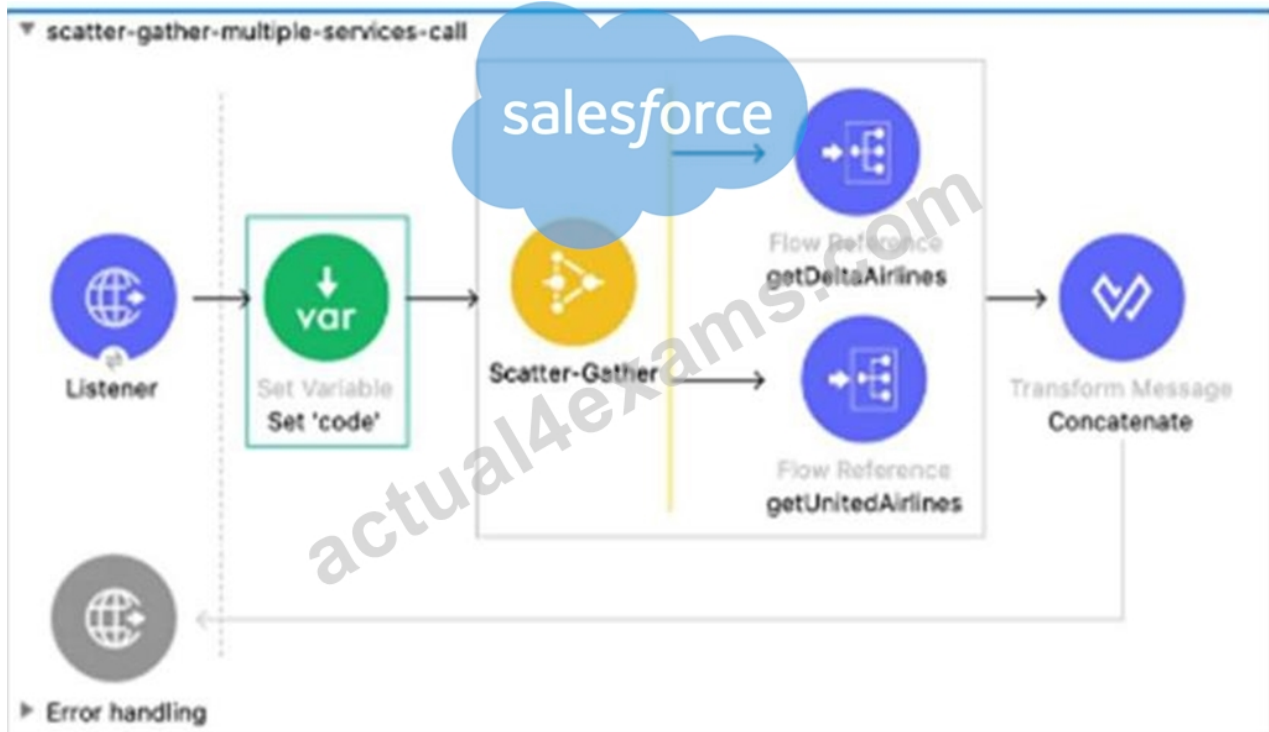

then you will pass the exam as easy as pie.

Salesforce Certified MuleSoft Developer II Sample Questions (Q35-Q40):

NEW QUESTION # 35

Refer to the exhibit.

What required changes can be made to give a partial successful response in case the United Airlines API returns with a timeout?

- A. Add a Scatter-gather component inside a Try scope.
Set the payload to a default value 'Error' inside the error handler using the On Error Propagate scope.
- B. Add Flow Reference components inside a Try scope
Set the payload to a default value " inside the error handler using the On Error Propagate scope
- C. Add Flow Reference components inside a Try scope.
Set the payload to a default value" insider the error handler using the ON Error Continue scope
- **D. Add a Scatter-Gather component inside a Try scope.**
Set the payload to a default value 'Error' inside the error handler using the On Error Continue scope.

Answer: D

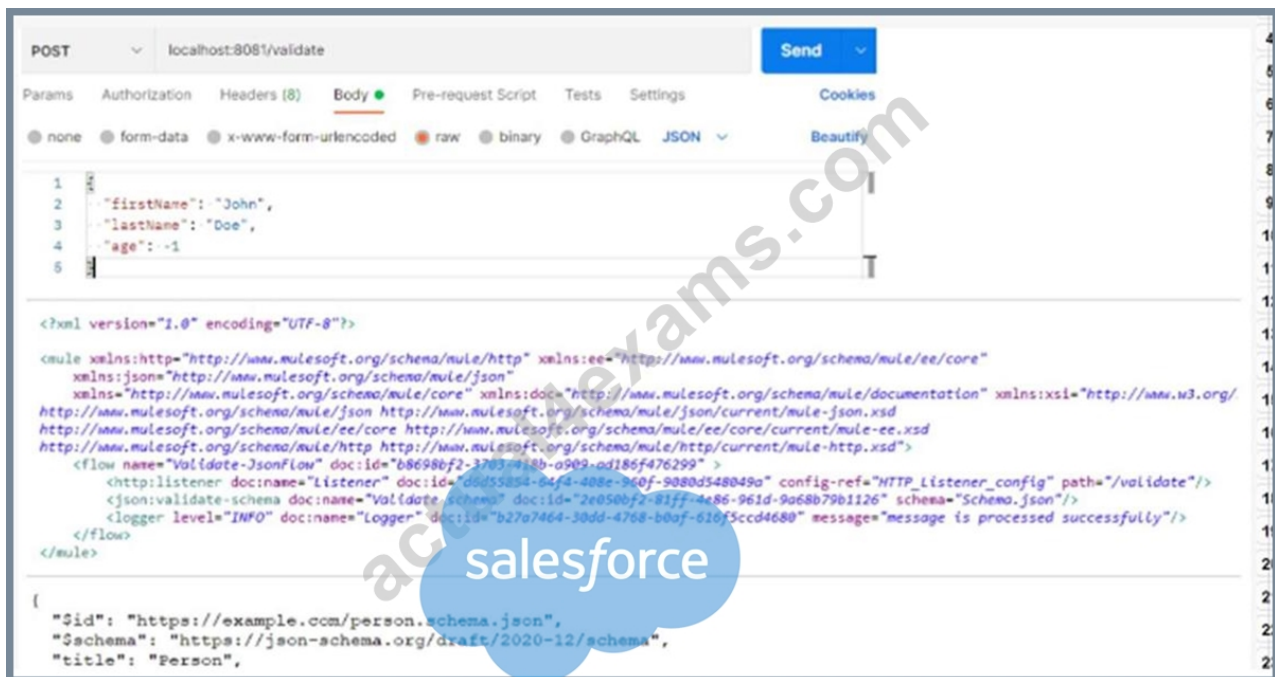

Explanation:

To give a partial successful response in case the United Airlines API returns with a timeout, the developer should add a Scatter-Gather component inside a Try scope, and set the payload to a default value 'Error' inside the error handler using the On Error Continue scope. A Scatter-Gather component allows sending multiple requests concurrently and aggregating the responses into an array. A Try scope allows handling errors that occur within it using an error handler. An On Error Continue scope allows continuing the flow execution after handling an error. Therefore, by using these components, the developer can send requests to both APIs in parallel, handle any timeout errors from United Airlines API, and return a partial response with a default value for that API.

Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept> <https://docs.mulesoft.com/mule-runtime/4.3/try-scope-concept> <https://docs.mulesoft.com/mule-runtime/4.3/on-error-continue-concept>

NEW QUESTION # 36

Refer to the exhibit.

Based on the code snippet, schema.json file, and payload below, what is the outcome of the given code snippet when a request is sent with the payload?

- A. The Mule flow will execute successfully with status code 204
- B. The Mule flow will execute successfully with status code 200, and the response will be the JSON sent in request
- C. The Mule flow will execute successfully with status code 200m and a response will display the message " Age in years which must equal to or greater than zero."
- **D. The Mule flow will throw the exception 'JSON:SCHEMA_NOT_HONOURED'**

Answer: D

Explanation:

Based on the code snippet, schema.json file, and payload below, the outcome of the given code snippet when a request is sent with the payload is that the Mule flow will throw the exception 'JSON:SCHEMA_NOT_HONOURED'. This is because the payload does not conform to the schema.json file, which specifies that age must be a number greater than or equal to zero. The payload has age as a string with a negative value, which violates the schema. Therefore, the validate-schema operation throws an error with type 'JSON:SCHEMA_NOT_HONOURED'. Reference: <https://docs.mulesoft.com/json-module/1.1/json-validate-schema>

NEW QUESTION # 37

Two APIs are deployed to a two-node on-prem cluster. Due to a requirements change, the two APIs must communicate to exchange data asynchronously.

- A. The VM Connector is used to inter-application communication, so it is not possible to use the VM Connector
- B. Instead of using the VM Connector use <flow-ref> directly
- **C. If the two APIs use the same domain, the VM Connector can be leveraged**
- D. It is not possible to use the VM Connector since the APIs are running in a cluster mode and each mode has it own set of VM Queues

Answer: C

Explanation:

To communicate asynchronously between two APIs deployed to a two-node on-prem cluster, the developer can use the VM Connector if the two APIs use the same domain. The VM Connector allows passing messages between different Mule applications within a single Mule runtime instance or across different instances using shared memory or persistent storage. If two APIs are deployed under the same domain, they can share resources such as VM queues and communicate asynchronously using VM Connector operations. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/vm-connector> <https://docs.mulesoft.com/mule-runtime/4.3/shared-resources>

NEW QUESTION # 38

Which properties are mandatory on the HTTP Connector configuration in order to use the OAuth 2.0 Authorization Code grant type for authentication?

- A. External callback URL, access token URL, client ID response access token
- **B. External callback URL, access token URL, local authorization URL, authorization URL, client ID, client secret**
- C. External callback URL, access token URL, client ID, response refresh token
- D. Token URL, authorization URL, client ID, client secret local callback URL

Answer: B

Explanation:

To use the OAuth 2.0 Authorization Code grant type for authentication, the HTTP Connector configuration requires the following properties: token URL, authorization URL, client ID, client secret, and local callback URL. The token URL is the endpoint of the authorization server that provides access tokens. The authorization URL is the endpoint of the authorization server that initiates the user consent flow. The client ID and client secret are the credentials of the Mule application registered with the authorization server. The local callback URL is the endpoint of the Mule application that receives the authorization code from the authorization server.

Reference: <https://docs.mulesoft.com/http-connector/1.6/http-authentication#oauth-2-0>

NEW QUESTION # 39

Which statement is true when using XML SDK for creating custom message processors?

- A. All operations are public
- **B. Properties are fields defined by an end user of the XML SDK component and serve as a global configuration for the entire Mule project in which they are used**
- C. Operations can be reused in recursive calls
- D. An XML SDK provides both inbound and outbound operations

Answer: B

Explanation:

When using XML SDK for creating custom message processors, all operations are public by default and can be used by any Mule application that imports them. There is no way to make an operation private or protected in XML SDK. Reference:

<https://docs.mulesoft.com/mule-sdk/1.1/xml-sdk#operations>

NEW QUESTION # 40

.....

Mule-Dev-301 Exam is a Salesforce certification exam and IT professionals who have passed some Salesforce certification exams are popular in IT industry. So more and more people participate in Mule-Dev-301 certification exam, but Mule-Dev-301 certification exam is not very simple. If you do not have participated in a professional specialized training course, you need to spend a lot of time and effort to prepare for the exam. But now Actual4Exams can help you save a lot of your precious time and energy.
