2026 Accurate UiPath-ADAv1 – 100% Free Latest Dumps Files | UiPath-ADAv1 Study Material

If you still feel nervous for the exam, our UiPath-ADAv1 Soft test engine will help you to release your nerves. UiPath-ADAv1 Soft test engine can stimulate the real environment, and you can know the general process of exam by using the exam dumps. What's more, we provide you with free update for one year, and you can get the latest information for the UiPath-ADAv1 Learning Materials in the following year. We have online service stuff, if you have any questions about the UiPath-ADAv1 exam braindumps, just contact us.

UiPath Automation Developer Associate v1 Exam Sample Questions (Q86-Q91):

NEW QUESTION # 86
How would you define a linear process in UiPath?

- A. The process steps are performed only once. If the need is to process additional data, then the automation must execute again.
- B. The steps of the process refer to the execution of steps in a sequential manner, where each subsequent step depends on the successful completion of the previous step.
- C. The steps of the process repeat multiple times over different data items. However, the automation design is such that each repeatable part processes independently.
- D. The steps of the process are performed multiple times, but each time different data items are used.

Answer: A

Explanation:
A linear process in UiPath is a type of automation process that consists of a series of steps that are executed only once for a single data item or transaction. A linear process does not have any loops or iterations, and it does not depend on any external factors or conditions. A linear process is suitable for scenarios where the automation process is simple, straightforward, and does not require any dynamic branching or decision making. (UiPath Automation Developer study guide) References:
Framework for linear process or single transaction
How to modify ReFramework to Linear Process
Difference between Linear process and Transactional process

NEW QUESTION # 87
Which of the following statements is true?

- A. UiPath Orchestrator consumes the Queue Items uploaded to the UiPath Robot.
- B. UiPath Robots can be deleted if they have pending or active jobs in UiPath Orchestrator.
- C. Attended robots can be connected to UiPath Orchestrator without Windows Credentials.
- D. Unattended robots can be connected to UiPath Orchestrator without the Windows username.

Answer: C

Explanation:
UiPath Attended Robots do not require Windows credentials to be connected to Orchestrator, because:
* They run under the currently logged-in user and do not require a predefined Windows username
/password.
* Attended Robots must be manually triggered by a user and cannot run automatically like Unattended Robots.
* They do not require a remote desktop session like Unattended Robots.
Why Other Options Are Incorrect?
* A (UiPath Robots can be deleted if they have pending or active jobs in UiPath Orchestrator.) #
* Incorrect. Robots cannot be deleted if they have active or pending jobs in Orchestrator.
* Solution: You must stop or remove pending jobs before deleting the robot.
* B (Unattended robots can be connected to UiPath Orchestrator without the Windows username.)
#
* Incorrect. Unattended Robots require Windows credentials to log in and execute tasks without user intervention.
* C (UiPath Orchestrator consumes the Queue Items uploaded to the UiPath Robot.) #
* Incorrect.
* Orchestrator manages and distributes Queue Items to Robots.
* Robots consume the Queue Items, not Orchestrator.

NEW QUESTION # 88
What are the steps to publish a project from UiPath Studio?
Instructions: Drag the Description found on the "Left" and drop on the correct Step Sequence found on the
"Right".

Answer:

Explanation:

Explanation:
A screenshot of a computer Description automatically generated

Step Sequence

In the Design ribbon tab, click on the "Publish" button.

Fill in the necessary publishing details, such as the project name, version, and description.

Choose the desired publishing option, such as Orchestrator, Local, or Custom NuGet feed.

Click on the "Publish" button to initiate the publishing process.
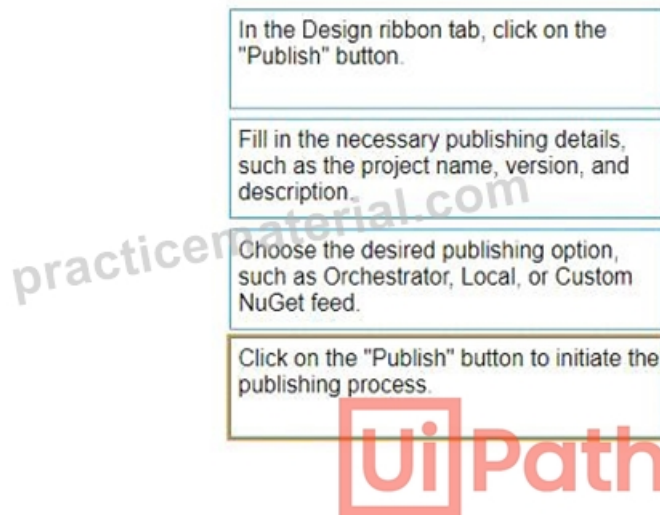

The steps to publish a project from UiPath Studio are:
In the Design ribbon tab, click on the "Publish" button. The Publish Project window opens. (UiPath Studio documentation1) Fill in the necessary publishing details, such as the project name, version, and description. You can also add release notes and select the environment where the project will run. (UiPath Studio documentation1) Choose the desired publishing option, such as Orchestrator, Local, or Custom NuGet feed. Depending on your choice, you may need to provide additional information, such as the Orchestrator URL, the local folder path, or the custom feed URL. (UiPath Studio documentation1) Click on the "Publish" button to initiate the publishing process. A confirmation message will appear when the project is successfully published. (UiPath Studio documentation1)
Short Explanation: Publishing a project from UiPath Studio means creating a package that contains all the files and dependencies required to run the automation process. The package can be deployed to different locations, such as Orchestrator, a local machine, or a custom NuGet feed. Publishing a project from UiPath Studio involves four main steps: clicking on the Publish button, filling in the publishing details, choosing the publishing option, and confirming the publishing process. NEW QUESTION # 89
The Extract PDF Page Range activity is used to extract a specific set of pages from a PDF file. Which of the following statements correctly describes this activity?

- A. PageCount argument outputs the number of extracted pages.
- B. Range argument accepts complex range values or "All".
- C. OutputFileName argument is optional.
- D. Password-protected PDF files cannot be processed with this activity.

Answer: B

Explanation:
The Extract PDF Page Range activity is used to extract a specific set of pages from a PDF file and save them as a new PDF file1. The OutputFileName argument is required and specifies the path and name of the new PDF file1. The Range argument accepts complex range values or "All" to indicate which pages to extract12. For example, "1-3,5,7-9" will extract pages 1 to 3, 5, and 7 to 92. The PageCount argument outputs the number of pages in the original PDF file, not the extracted pages1. Password-protected PDF files can be processed with this activity by using the Password argument to provide the password1.

NEW QUESTION # 90

In the Output property of all Get Mail activities, what is the supported variable type?

- A. List<MailMessage>
- B. List<String>
- C. MailMessage
- D. String

Answer: A

Explanation:
In the Output property of all Get Mail activities, the supported variable type is List<MailMessage>. The Output property is the property that stores the result of the activity in a variable. The Get Mail activities are the activities that retrieve email messages from various mail servers, such as POP3, IMAP, Outlook, or Exchange. The result of the Get Mail activities is a collection of email messages that match the specified criteria, such as the mail folder, the filter, or the top count. The collection of email messages is represented by the List<MailMessage> type, which is a generic list that contains MailMessage objects. A MailMessage object is a class that represents an email message, with properties such as Subject, Body, Attachments, From, To, etc1. For example, if the Get Mail activity is used to retrieve the email messages from the Inbox folder of an Outlook account, the Output property can be configured with a variable of type List<MailMessage>, such as mailList. The mailList variable will store the email messages as a list of MailMessage objects, which can then be accessed or manipulated using other activities, such as For Each, Save Attachments, or Send Mail2.
