## SAP Certified Associate - SAP Business Data Cloud 認定 C-BCBDC-2505 試験問題 (Q95-Q100):

### 質問 # 95

What are some features of the out-of-the-box reporting with intelligent applications in SAP Business Data Cloud? Note: There are 2 correct answers to this question.

- A. AI-based suggestions for intelligent applications in the SAP Business Data Cloud Cockpit
- B. Services for transforming and enriching data
- C. Manual creation of artifacts across all involved components
- D. Automated data provisioning from business application to dashboard

正解: B、D

解説:

The out-of-the-box reporting capabilities with intelligent applications in SAP Business Data Cloud (BDC) are designed to streamline the analytical process and deliver immediate value. Two significant features include automated data provisioning from business application to dashboard. This means that intelligent applications handle the end-to-end flow of data, from its source in operational systems, through processing in BDC, and finally to visualization in dashboards, with minimal manual intervention. This automation ensures timely and consistent data delivery for reporting. Additionally, these intelligent applications leverage services for transforming and enriching data. As part of the pre-built logic within these applications, data is automatically transformed (e.g., aggregated, filtered) and enriched (e.g., adding calculated KPIs, combining with master data) to make it immediately suitable for reporting and analysis. This reduces the need for manual data manipulation by users, providing ready-to-consume insights.
