CLF-C02 100% Exam Coverage | CLF-C02 Test Question

We have free demo of our CLF-C02 exam questions offering the latest catalogue and brief contents for your information on the website, if you do not have thorough understanding of our CLF-C02 study materials. Many exam candidates build long-term relation

with our company on the basis of our high quality CLF-C02 Guide engine. And our CLF-C02 training braindumps have become their best assistant on the way to pass the exam.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q512-Q517):

NEW QUESTION # 512

Which guidelines are best practices for using AWS Identity and Access Management (IAM)? (Select TWO.)

- A. Use inline policies instead of customer managed policies.
- **B. Create individual IAM users.**
- C. Grant maximum privileges to IAM users.
- D. Share access keys.
- **E. Use groups to assign permissions to IAM users.**

Answer: B,E

NEW QUESTION # 513

A company wants to establish a security layer in its VPC that will act as a firewall to control subnet traffic. Which AWS service or feature will meet this requirement?

- **A. Security groups**
- B. Routing tables
- C. Amazon GuardDuty
- D. Network access control lists (network ACLs)

Answer: A

Explanation:

Security groups are the service or feature that meets the requirement of establishing a security layer in a VPC that will act as a firewall to control subnet traffic. Security groups are stateful firewalls that control the inbound and outbound traffic at the instance level. You can assign one or more security groups to each instance in a VPC, and specify the rules that allow or deny traffic based on the protocol, port, and source or destination. Security groups are associated with network interfaces, and therefore apply to all the instances in the subnets that use those network interfaces. Routing tables are used to direct traffic between subnets and gateways, not to filter traffic. Network ACLs are stateless firewalls that control the inbound and outbound traffic at the subnet level, but they are less granular and more cumbersome to manage than security groups. Amazon GuardDuty is a threat detection service that monitors your AWS account and workloads for malicious or unauthorized activity, not a firewall service.

NEW QUESTION # 514

A company wants to access a report about the estimated environmental impact of the company's AWS usage. Which AWS service or feature should the company use to meet this requirement?

- A. AWS Organizations
- **B. AWS Billing console**
- C. Amazon Simple Notification Service (Amazon SNS)
- D. IAM policy

Answer: B

Explanation:

The company should use the AWS Billing console to access a report about the estimated environmental impact of the company's AWS usage. The AWS Billing console provides customers with various tools and reports to manage and monitor their AWS costs and usage. One of the reports available in the AWS Billing console is the AWS Sustainability Dashboard, which shows the estimated carbon footprint and energy mix of the customer's AWS usage. The company can use this dashboard to measure and improve the sustainability of their cloud workloads. AWS Organizations, IAM policy, and Amazon Simple Notification Service (Amazon SNS) are not services or features that can provide a report about the estimated environmental impact of the company's AWS usage. AWS Organizations is a service that enables customers to centrally manage and govern their AWS accounts. IAM policy is a document that defines the permissions for an IAM identity (user, group, or role) or an AWS resource. Amazon SNS is a fully managed pub/sub messaging service that enables customers to send messages to subscribers or other AWS services.

NEW QUESTION # 515

A company wants to integrate natural language processing (NLP) into business intelligence (BI) dashboards. The company wants to ask questions and receive answers with relevant visualizations.

Which AWS service or tool will meet these requirements?

- A. Amazon Lex
- B. Amazon Macie
- C. Amazon QuickSight Q
- D. Amazon Rekognition

Answer: C

Explanation:

Explanation

Amazon QuickSight Q is a natural language query feature that allows users to ask questions about their data and receive answers in the form of relevant visualizations¹. Amazon Macie is a data security and data privacy service that uses machine learning and pattern matching to discover and protect sensitive data in AWS². Amazon Rekognition is a computer vision service that can analyze images and videos for faces, objects, scenes, text, and more³. Amazon Lex is a service for building conversational interfaces using voice and text⁴.

NEW QUESTION # 516

Which feature of the AWS Cloud gives users the ability to pay based on current needs rather than forecasted needs?

- A. Pay-as-you-go pricing
- B. Savings Plans
- C. Volume discounts
- D. AWS Budgets

Answer: A

Explanation:

Pay-as-you-go pricing is the feature of the AWS Cloud that gives users the ability to pay based on current needs rather than forecasted needs. Pay-as-you-go pricing means that users only pay for the AWS services and resources they use, without any upfront or long-term commitments. This allows users to scale up or down their usage depending on their changing business requirements, and avoid paying for idle or unused capacity. Pay-as-you-go pricing also enables users to benefit from the economies of scale and lower costs of AWS as they grow their business⁵

NEW QUESTION # 517

.....

Once you learn all CLF-C02 questions and answers in the study guide, try CramPDF's innovative testing engine for exam like CLF-C02 practice tests. These tests are made on the pattern of the Amazon real exam and thus remain helpful not only for the purpose of revision but also to know the real exam scenario. To ensure excellent score in the exam, CramPDF's braindumps are the real feast for all exam candidates. They contain questions and answers on all the core points of your exam syllabus. Most of these questions are likely to appear in the CLF-C02 Real Exam.
