## Why Should You Start Preparation With Esri EAPA\_2025 Exam Dumps?

DumpsKing is one of the leading platforms that has been helping ArcGIS Pro Associate 2025 (EAPA\_2025) exam candidates for many years. Over this long time period we have helped ArcGIS Pro Associate 2025 (EAPA\_2025) exam candidates in their preparation. They got help from DumpsKing Esri EAPA\_2025 Practice Questions and easily got success in the final Esri EAPA\_2025 certification exam. You can also trust Esri EAPA\_2025 exam dumps and start preparation with complete peace of mind and satisfaction.

## Esri ArcGIS Pro Associate 2025 Sample Questions (Q31-Q36):

### NEW QUESTION # 31

A GIS analyst has a feature class and a non-spatial table stored in the same geodatabase. The analyst needs to create a composite relationship to ensure data integrity.

Which association type should the analyst apply?

- A. Attribute join
- B. Spatial join
- C. Relationship class

**Answer: C**

**Explanation:**

A relationship class defines a permanent association between a feature class and a table or between two feature classes in a geodatabase. Composite relationship classes enforce referential integrity, ensuring that related records remain consistent (e.g., when a parent record is deleted, related child records are also removed).

\* Attribute join (Option A) is temporary and does not enforce integrity.

\* Spatial join (Option B) requires spatial relationships and applies only between spatial datasets.

\* Relationship class (Option C) allows managing relationships between spatial and non-spatial tables with referential integrity. Therefore, the correct answer is C.

-

### NEW QUESTION # 32

In ArcGIS Pro, a GIS analyst adds a mosaic dataset to a map and notices that the entire mosaic area is covered with a black and white checkerboard.

Which tool should the analyst use to make the images visible in the map as part of the mosaic dataset?

- A. Define Overviews
- **B. Repair Mosaic Dataset Paths**
- C. Build Pyramids

**Answer: B**

Explanation:

The black-and-white checkerboard indicates that the mosaic dataset cannot locate the source rasters. Repair Mosaic Dataset Paths allows the analyst to correct the file paths if the rasters have been moved or renamed, thus restoring visibility.

\* Define Overviews (Option A) creates reduced-resolution overviews for fast display but does not fix broken paths.

\* Build Pyramids (Option B) builds pyramids for raster display performance but also requires valid data paths first.

Therefore, the correct answer is C.

-

### NEW QUESTION # 33

A GIS analyst works for a small city's GIS department, which uses the same projected coordinate system for all data. The analyst's common workflows often require geoprocessing tools that create new outputs of data on disk.

Which workflow will produce geoprocessing outputs with the desired coordinate system?

- **A. Analysis tab > Environments button > Output Coordinate System**
- B. Project Settings Options > Map and Scene tab > Choose Spatial Reference
- C. Map Properties > Coordinate Systems tab > XY Coordinates Systems Available

**Answer: A**

Explanation:

The Output Coordinate System environment setting under the Analysis tab controls the spatial reference for outputs created during geoprocessing. This ensures new output datasets automatically adopt the specified coordinate system during processing.

\* Project Settings (Option A) control default map behavior but not geoprocessing outputs.

\* Map Properties (Option C) sets the coordinate system for map display, not for output results.

Therefore, the correct answer is B.

-

### NEW QUESTION # 34

Which ArcGIS Pro tab gives a user the option to export a map layout to a file?

- A. Project
- **B. Share**
- C. Map

**Answer: B**

Explanation:

The Share tab in ArcGIS Pro contains all options related to exporting maps, layouts, and sharing data. Export Layout options for formats like PDF, PNG, and others are found here.

\* Project tab is used for application-level settings.

\* Map tab is for map design and editing.

\* Share tab includes all export and sharing options for layouts.

Therefore, the correct answer is C.

### NEW QUESTION # 35

A GIS technician has two feature classes: Sites and Buildings. The technician needs to assign the building name to the site if they intersect when adding/updating site features and wants to use attribute rules to do this. Which attribute rule type should the analyst use to accomplish this task?

- A. Calculation rule
- B. Validation rule
- C. Constraint rule

**Answer: A**

Explanation:

Calculation rules automatically calculate attribute values based on spatial relationships, other attribute values, or predefined logic at the time of feature creation or update. In this scenario, the intersecting building name can be assigned automatically to the site feature using a calculation rule.

\* Validation rules (Option A) check for rule compliance but don't assign values.

\* Constraint rules (Option B) prevent invalid edits but do not calculate fields.

Therefore, the correct answer is C.

-

### NEW QUESTION # 36

.....

It is known to us that getting the EAPA\_2025 certification has become more and more popular for a lot of people in different area, including students, teachers, and housewife and so on. Everyone is desired to have the EAPA\_2025 certification. Our EAPA\_2025 Exam Dumps Question is very necessary for you to try your best to get the certification in a short time. EAPA\_2025 Exam Braindumps is willing to give you a hand to pass the exam. EAPA\_2025 Exam Torrent will be the best study tool for you to get the certification
