## Real CIS-Discovery Braindumps, Passing CIS-Discovery Score

Will you feel nervous in the exam? If you do, just choose us, our CIS-Discovery Soft test engine can stimulate the real exam environment, which will help you know the procedure of the exam, and will strengthen your confidence. Moreover CIS-Discovery exam dumps are high-quality, and we have professional experts to compile them, and they can help you pass the exam just one time. We offer you free demo to have a try for CIS-Discovery Exam Dumps, and free update for one year. If you indeed have questions, just contact with us.

## ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q20-Q25):

### NEW QUESTION # 20

Which choice will populate the Location field for a discovered CI?

- A. Location field for a Port Probe
- B. Location field for a Discovery Schedule
- C. Location field for a parent CI Type
- D. Location report from the Discovery Dashboard

**Answer: B**

Explanation:

The Location field for a discovered CI is populated by the Location field of the Discovery Schedule that triggered the discovery of that CI. This is done by the DiscoverySensor script, which gets the location ID from the Discovery Schedule and passes it to the Shazzam probe, which then updates the cidata with the location information. The Location field for a parent CI Type, a Port Probe, or a Discovery Dashboard report does not affect the Location field for a discovered CI.

**NEW QUESTION # 21**

What do most Discovery properties start with?

- A. glide.item
- B. disco.release
- C. discovery.prop
- D. **glide.discovery**

**Answer: D**

Explanation:

In ServiceNow Discovery, most properties related to the Discovery module start with the prefix 'glide.discovery'. This naming convention is part of ServiceNow's system property design, where 'glide' typically indicates system properties and 'discovery' specifies that the property is related to the Discovery module. Properties are used to configure various aspects of the Discovery process, such as behavior, timeouts, and performance settings.

**NEW QUESTION # 22**

File-based Discovery is triggered during the.

- A. Identification Phase
- B. Scan Phase
- C. Classify Phase
- D. Pattern Phase
- E. **Exploration Phase**

**Answer: E**

Explanation:

File-based Discovery is a process that helps identify what software is running on your Windows and UNIX servers and devices, even if there is no registration information available. File-based Discovery is triggered in the exploration phase of normal Discovery, after the target device has been classified and identified. File-based Discovery probes execute a scan searching for specific file extensions or file names in paths that you configure. The resulting file information is returned in the probe payload. The sensor attempts to match the discovered files with installed software, using the file name, size, and version returned by the probe.
