P.S. Free 2026 CompTIA DA0-002 dumps are available on Google Drive shared by iPassleader: <https://drive.google.com/open?id=17q4UBbQtb82kYcdQvLtp4WpmqMJR0lbf>

Our DA0-002 real materials support your preferences of different practice materials, so three versions are available. PDF version - legible to read and remember, support customers' printing request. Software version of DA0-002 real materials - supporting simulation test system, and support Windows system users only. App online version of DA0-002 Guide question - suitable to all kinds of equipment or digital devices, supportive to offline exercises on the condition that you practice it without mobile data. You can take a look of these DA0-002 exam dumps and take your time to decide.

The iPassleader is committed from the first day to help students ace the CompTIA DA0-002 exam at any cost. These formats are CompTIA DA0-002 PDF questions file, desktop practice test software, and web-based practice test software. All these three iPassleader DA0-002 Exam Questions formats are designed to help applicants ace the CompTIA DA0-002 exam preparation and enable the candidates to crack the final CompTIA DA0-002 exam easily.

CompTIA DA0-002 PDF Questions-Turn Your Exam Fear Into Confidence

There are a lot of experts and professors in our company. All DA0-002 study torrent of our company are designed by these

excellent experts and professors in different area. We can make sure that our DA0-002 test torrent has a higher quality than other study materials. The aim of our design is to improving your learning and helping you gains your DA0-002 Certification in the shortest time. If you long to gain the certification, our CompTIA Data+ Exam (2025) guide torrent will be your best choice.

CompTIA Data+ Exam (2025) Sample Questions (Q18-Q23):

NEW QUESTION # 18

Which of the following is the most efficient to use when programming repeatable tasks?

- A. LLM
- **B. RPA**
- C. Deep learning
- D. NLP

Answer: B

Explanation:

This question pertains to the Data Acquisition and Preparation domain, focusing on tools for automating repeatable tasks in data processes. The task is to identify the most efficient programming method.

* LLM (Option A): Large Language Models (e.g., GPT) are for text generation, not efficient for repeatable data tasks.

* Deep learning (Option B): Deep learning is for complex pattern recognition (e.g., image classification), not efficient for simple repeatable tasks.

* NLP (Option C): Natural Language Processing is for text analysis, not general repeatable tasks.

* RPA (Option D): Robotic Process Automation (RPA) automates repetitive, rule-based tasks (e.g., data entry, file processing), making it the most efficient for programming repeatable tasks.

The DA0-002 Data Acquisition and Preparation domain includes "executing data manipulation," and RPA is a widely used method for automating repeatable data tasks.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 2.0 Data Acquisition and Preparation.

NEW QUESTION # 19

While interacting with a data set, a data analyst learns that copies of the data are distributed across several data repositories around the globe. Which of the following concepts best describes this practice?

- A. High availability
- B. Duplication
- C. Redundancy
- **D. Replication**

Answer: D

NEW QUESTION # 20

The human resources department wants to know the number of employees who earn \$125,000 or more.

However, the department is concerned about duplicates in the dataset. Given the following table:

Employee_ID

Level

Salary

001

1

10000

002

2

20000

003

2

256000

004

2

125000

001
1
10000
002
2
20000

Which of the following SQL statements resolves this issue?

- A. SELECT DISTINCT Employee_ID FROM Employee WHERE Salary >= 125000
- B. SELECT DISTINCT Employee_ID FROM Employee WHERE Salary > 125000
- C. SELECT COUNT(DISTINCT Employee_ID) FROM Employee WHERE Salary >= 125000
- D. SELECT COUNT(Employee_ID) FROM Employee WHERE Salary >= 125000

Answer: C

Explanation:

This question falls under the Data Analysis domain, focusing on SQL queries to handle duplicates while counting employees. The task is to count unique employees with a salary of \$125,000 or more, addressing duplicates in the dataset.

* Option A: SELECT DISTINCT Employee_ID FROM Employee WHERE Salary >= 125000 This lists unique Employee_IDs but doesn't provide a count, which the department needs.

* Option B: SELECT COUNT(DISTINCT Employee_ID) FROM Employee WHERE Salary >= 125000 This counts unique Employee_IDs (using DISTINCT) with a salary of \$125,000 or more, correctly addressing duplicates and providing the required count (2 employees: 003 and 004).

* Option C: SELECT DISTINCT Employee_ID FROM Employee WHERE Salary > 125000 This lists unique Employee_IDs with a salary strictly greater than \$125,000 (missing 004), and doesn't provide a count.

* Option D: SELECT COUNT(Employee_ID) FROM Employee WHERE Salary >= 125000 This counts all rows without addressing duplicates, resulting in an incorrect count (2 rows, but only 2 unique employees).

The DA0-002 Data Analysis domain includes "applying the appropriate descriptive statistical methods using SQL queries," and COUNT(DISTINCT) is the correct method to count unique employees while handling duplicates.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 3.0 Data Analysis.

NEW QUESTION # 21

A data analyst must combine service calls into low-, medium-, and high-priority levels in order to analyze organizational responses. Which of the following techniques should the analyst use for this task?

- A. Binning
- B. Augmentation
- C. Scaling
- D. Imputation

Answer: A

Explanation:

This question pertains to the Data Analysis domain, focusing on techniques for categorizing data. The task involves grouping service calls into priority levels (low, medium, high), which requires segmenting numerical or ordinal data into discrete categories.

* Augmentation (Option A): Augmentation involves adding data (e.g., in machine learning), not categorizing existing data.

* Imputation (Option B): Imputation fills in missing values, not relevant for categorizing priority levels.

* Scaling (Option C): Scaling adjusts numerical data to a common range (e.g., normalization), not suitable for creating priority categories.

* Binning (Option D): Binning groups continuous or ordinal data into discrete categories (e.g., assigning calls to low, medium, or high priority based on a metric like response time), which fits the task.

The DA0-002 Data Analysis domain includes "applying the appropriate descriptive statistical methods," and binning is a standard technique for categorizing data for analysis.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 3.0 Data Analysis.

NEW QUESTION # 22

Which of the following is a NoSQL database?

- A. MySQL

- B. Oracle
- C. PostgreSQL
- **D. MongoDB**

Answer: D

Explanation:

This question falls under the Data Concepts and Environments domain, focusing on types of databases. The task is to identify a NoSQL database among the options.

* PostgreSQL (Option A): PostgreSQL is a relational (SQL) database, not NoSQL.

* MySQL (Option B): MySQL is a relational (SQL) database, not NoSQL.

* Oracle (Option C): Oracle Database is a relational (SQL) database, not NoSQL.

* MongoDB (Option D): MongoDB is a NoSQL database that uses a document-based model, storing data in JSON-like structures, making it the correct choice.

The DA0-002 Data Concepts and Environments domain includes understanding "different types of databases and data repositories," and MongoDB is a well-known NoSQL database.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 1.0 Data Concepts and Environments.

NEW QUESTION # 23

.....

The price for CompTIA DA0-002 exam materials is reasonable, and no matter you are a student at school or an employee in the company, you can afford it. Besides, CompTIA Data+ Exam (2025) DA0-002 Exam Materials are compiled by skilled professionals, and they are familiar with the exam center, therefore the quality can be guaranteed.
