### 최신 CCST 100-140 무료샘플문제 (Q620-Q625):

#### 질문 # 620

When working on a powered device, an IT technician suspects a risk of electrical shock due to exposed wiring. What is the safest action to take first?

- A. Continue working but avoid touching the exposed wires
- B. Cover the exposed wires with electrical tape and continue working
- C. Test the exposed wires with a multimeter to confirm if they are live
- D. Immediately turn off the power to the device before proceeding further

정답: D

#### 설명:

Correct Answer: B. Immediately turn off the power to the device before proceeding further Turning off the power immediately is the safest approach when dealing with exposed wiring, as it eliminates the risk of electrical shock, allowing for safe subsequent handling of the wiring issue.

Option A is incorrect because continuing to work near exposed wires without addressing the risk is unsafe.

Option C is incorrect as covering the wires with electrical tape does not address the potential hazard of the device being powered on.

Option D is incorrect because testing exposed wires while the device is powered could lead to electrical shock if the wires are live.

#### 질문 # 621

What is a potential drawback of mapping Dropbox as a network drive in a corporate environment that IT support should be aware of?

- A. Automatic encryption of all stored files
- B. Dependency on internet connectivity for access to files
- C. Increased local storage usage on each user's computer
- D. Reduced security due to cloud-based storage

정답: B

#### 설명:

Mapping Dropbox as a network drive means that users will depend on an active internet connection to access their files. This could

be problematic in areas with unstable internet connectivity or during network outages.

Option A is incorrect because mapping as a network drive does not necessarily use more local storage unless files are set to be available offline.

Option B is incorrect because Dropbox provides strong security measures, and using it as a network drive does not inherently reduce security.

Option D is incorrect because while Dropbox does offer encryption, it's not an automatic consequence of mapping it as a network drive.

#### 질문 # 622

What is the primary purpose of using a Mobile Device Management (MDM) solution?

- A. To authenticate users using an authenticator app on a mobile device.
- B. To allow the company to access the user's personal data.
- C. To ensure that mobile devices comply with company policy before accessing the network.
- D. To track the user's location when at work or traveling for business.

정답: C

설명:

MDM solutions let IT enforce security policies - such as requiring device encryption, up-to-date OS versions, PIN/passcode rules, and approved apps - before allowing mobile devices to connect to corporate networks or access company data.

#### 질문 # 623

Anna reports that she can no longer access the quarterly financial reports on the company server, even though her colleagues can. What should you check first to troubleshoot her access issue?

- A. Verify Anna's permissions on the folder containing the financial reports
- B. Update Anna's antivirus software
- C. Check if Anna's account is locked out
- D. Ask Anna to restart her computer

정답: A

설명:

Correct Answer. B. Verify Anna's permissions on the folder containing the financial reports Since Anna's issue is specific to accessing a particular resource that others can access, the first step is to check her permissions for that folder. This will determine if there has been any change affecting her access.

Option A is incorrect because an account lockout would prevent her from logging into the system entirely, not just accessing specific files.

Option C is incorrect as restarting the computer would not affect her permissions on the server.

Option D is incorrect because antivirus software updates would not impact her permissions to access specific network resources.

#### 질문 # 624

During a security review, you notice several incidents where employees complied with requests from unauthorized callers impersonating company executives.

What preventative measure should be implemented?

- A. Mandate security training that includes recognizing and responding to impersonation attempts
- B. Provide detailed personal information about executives to employees for verification purposes
- C. Limit telephone use to internal calls only
- D. Increase surveillance of executive offices

정답: A

설명:

Correct Answer. B. Mandate security training that includes recognizing and responding to impersonation attempts Educating employees on how to recognize and appropriately respond to impersonation attempts is essential to bolster organizational defenses against social engineering attacks.

Option A is incorrect because providing personal information broadly can lead to privacy violations and further security issues  
Option C is incorrect because while surveillance may provide some security enhancements, it does not address the direct issue of impersonation over communication channels  
Option D is incorrect because restricting telephone use to only internal calls is impractical and could hinder normal business operations
