Realistic N10-009 Latest Test Practice - CompTIA Network+ Certification Exam Valid Test Blueprint Free PDF Quiz

Whereas the N10-009 PDF file is concerned this file is the collection of real, valid, and updated CompTIA N10-009 exam questions. You can use the CompTIA N10-009 PDF format on your desktop computer, laptop, tabs, or even on your smartphone and start CompTIA Network+ Certification Exam (N10-009) exam questions preparation anytime and anywhere.

CompTIA Network+ Certification Exam Sample Questions (Q384-Q389):

NEW QUESTION # 384
A network administrator is configuring a wireless network with an ESSID. Which of the following is a user benefit of ESSID compared to SSID?

- A. Roaming between access points
- B. Advanced security
- C. Stronger wireless connection
- D. Increased throughput

Answer: A

Explanation:
An Extended Service Set Identifier (ESSID) allows multiple access points to share the same SSID, enabling seamless roaming for users. This means that users can move between different access points within the same ESSID without losing connection or having to reauthenticate. This provides a better user experience, especially in large environments such as office buildings or

campuses.References:CompTIA Network+ study materials.

NEW QUESTION # 385
What is the most likely cause when a mobile device frequently experiences dropped calls, data interruptions, and fast battery drain with a weak signal?

- A. Signal strength
- B. Channel frequency
- C. Power budget
- D. WPS configuration

Answer: A

Explanation:
When signal strength is poor, mobile devices constantly boost their transmission power in an attempt to maintain a stable connection. This results in dropped calls/data and rapid battery drain. Since a repeater was installed, misalignment or misconfiguration could be degrading the signal strength.
* A. WPS applies to Wi-Fi, not cellular repeaters.
* C. Channel frequency might matter for interference, but signal strength is the most direct cause of the described symptoms.
* D. Power budget applies to PoE and wired devices, not mobile phones.
References (CompTIA Network+ N10-009):
* Domain: Network Troubleshooting - Wireless/cellular troubleshooting, signal strength impact, user symptoms (battery drain, poor connectivity).

NEW QUESTION # 386
Which of the following can be used when a server at a remote site is physically unreachable?

- A. OOB management
- B. Crash cart
- C. Console
- D. Jump box

Answer: A

Explanation:
Out-of-band (OOB) managementallows administrators to manage devices remotely even if the primary network is down. This is especially useful when physical access to the server is not possible. OOB management often uses a separate management interface, ensuring access regardless of the server's operational state.

NEW QUESTION # 387
Which of the following disaster recovery metrics is used to describe the amount of data that is lost since the last backup?

- A. RPO
- B. MTBF
- C. MTTR
- D. RTO

Answer: A

Explanation:
Definition of RPO:
Recovery Point Objective (RPO) is a disaster recovery metric that describes the maximum acceptable amount of data loss measured in time. It indicates the point in time to which data must be recovered to resume normal operations after a disaster.
For example, if the RPO is set to 24 hours, then the business could tolerate losing up to 24 hours' worth of data in the event of a disruption.
Why RPO is Important:
RPO is critical for determining backup frequency and helps businesses decide how often they need to back up their data. A lower

RPO means more frequent backups and less potential data loss.

NEW QUESTION # 388
Which of the following technologies are X.509 certificates most commonly associated with?

- A. LDAP
- B. MFA
- C. VLAN tagging
- D. PKI

Answer: D

Explanation:
X.509 certificates are most commonly associated with Public Key Infrastructure (PKI). These certificates are used for a variety of security functions, including digital signatures, encryption, and authentication.
* PKI: X.509 certificates are a fundamental component of PKI, used to manage encryption keys and authenticate users and devices.
* Digital Certificates: They are used to establish secure communications over networks, such as SSL/TLS for websites and secure email communication.
* Authentication and Encryption: X.509 certificates provide the means to securely exchange keys and verify identities in various applications, ensuring data integrity and confidentiality.
Network References:
* CompTIA Network+ N10-007 Official Certification Guide: Covers PKI and the role of X.509 certificates in network security.
* Cisco Networking Academy: Provides training on PKI, certificates, and secure communications.
* Network+ Certification All-in-One Exam Guide: Explains PKI, X.509 certificates, and their applications in securing network communications.
