## New 156-315.81 Practice Materials - 156-315.81 Reliable Test Test

Starting from our 156-315.81 practice materials will make a solid foundation for your exam definitively. Do not satisfied with using shortcuts during your process, regular practice with our 156-315.81 exam prep will be easy. Tens of thousands of people has achieved success with our 156-315.81 study questions, you can absolutely do it. And you will find that passing the 156-315.81 exam is as easy as pie.

The CCSE R81 certification program is ideal for security professionals who want to enhance their skills and knowledge in the field of network security. The program is designed to provide security professionals with the expertise and knowledge necessary to deploy and manage Check Point Security solutions effectively. The program is also an excellent opportunity for security professionals to enhance their career prospects and advance their career in the field of network security.

## CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q497-Q502):

### NEW QUESTION # 497

The "MAC magic" value must be modified under the following condition:

- A. A firewall cluster is configured to use Multicast for CCP traffic
- B. A firewall cluster is configured to use Broadcast for CCP traffic
- C. There are more than two members in a firewall cluster
- D. There is more than one cluster connected to the same VLAN

## Answer: D

Explanation:

Comprehensive and Detailed Explanation: The "MAC magic" value, also known as the "Cluster Global ID", is a mechanism that identifies different clusters on the same network segment. It is used to prevent MAC address conflicts and ensure proper load balancing among cluster members. The "MAC magic" value is a hexadecimal number that is appended to the virtual MAC address of the cluster interface. By default, the "MAC magic" value is set to 1 for all clusters, but it must be changed manually if there is more than one cluster connected to the same VLAN. Otherwise, the clusters will not be able to communicate with each other or with external hosts.

The "MAC magic" value does not need to be modified under the other conditions listed in the question. The firewall cluster can use either Broadcast or Multicast for CCP traffic without affecting the "MAC magic" value. The number of members in a firewall cluster also does not affect the "MAC magic" value, as long as they belong to the same cluster and have the same Cluster Global ID.

## NEW QUESTION # 498

What is the amount of Priority Queues by default?

- A. There are 7 priority queues by default and this number cannot be changed.
- B. **There are 8 priority queues by default, and up to 8 additional queues can be manually configured**
- C. There are 8 priority queues and this number cannot be changed.
- D. There is no distinct number of queues since it will be changed in a regular basis based on its system requirements.

## Answer: B

## NEW QUESTION # 499

You find one of your cluster gateways showing "Down" when you run the "cphaprob stat" command. You then run the "clusterXL\_admin up" on the down member but unfortunately the member continues to show down. What command do you run to determine the cause?

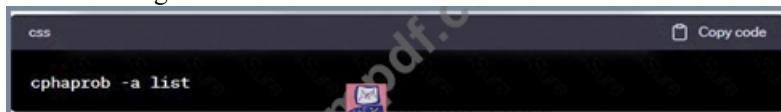

- A. **cphaprob -a list**
- B. cpstat -f all
- C. cphaprob -d -s report
- D. cphaprob -f register

## Answer: A

Explanation:

Explanation

To determine the cause of a cluster gateway showing "Down" despite running "clusterXL\_admin up" on the down member, you can run the following command:

```
cphaprob -a list
```

This command will provide a list of cluster members along with their statuses and can help diagnose the issue with the down member.

References: Check Point documentation or training materials related to High Availability and ClusterXL.

## NEW QUESTION # 500

UserCheck objects in the Application Control and URL Filtering rules allow the gateway to communicate with the users. Which action is not supported in UserCheck objects?

- A. Drop
- B. **Reject**
- C. Inform
- D. Ask

## Answer: B

Explanation:

The action that is not supported in UserCheck objects is Reject. UserCheck objects in the Application Control and URL Filtering rules allow the gateway to communicate with the users and display messages or requests on their browsers. The supported actions in UserCheck objects are Ask, Inform, Block, and Continue. The Ask action prompts the user to confirm or cancel an action. The Inform action notifies the user about an event or a policy. The Block action prevents the user from accessing a resource or performing an action. The Continue action allows the user to access a resource or perform an action after displaying a message.

## NEW QUESTION # 501

How to can you make sure that the old logs will be available after updating the Management to version R81.10 using the Advanced Upgrade Method?

- A. The logs will be included running `SFWDIR/scripts/migrate_server export -v R81.10 <path/filename>`
- B. Use the `migrate_server` tool with the option '`-I`' for the logs and '`-x`' for the index
- C. Use the WebUI to save a snapshot before updating the Management -> Maintenance > Snapshot Management
- D. Use the WebUI -> Maintenance > System Backup and store the backup on a remote FTP server

## Answer: A
