Amazon AWS Certified Cloud Practitioner Sample Questions (Q445-Q450):

NEW QUESTION # 445

Which AWS service can defend against DDoS attacks?

- A. AWS WAF
- B. Amazon Inspector
- C. AWS Shield Standard
- D. AWS Firewall Manager

Answer: C

Explanation:

AWS Shield Standard is a service that provides protection against Distributed Denial of Service (DDoS) attacks for all AWS customers at no additional charge. It automatically detects and mitigates the most common and frequently occurring network and transport layer DDoS attacks that target AWS resources, such as Amazon EC2 instances, Elastic Load Balancers, Amazon CloudFront distributions, and Amazon Route 53 hosted zones. AWS Firewall Manager is a service that allows users to centrally configure and manage firewall rules across their AWS accounts and resources, such as AWS WAF web ACLs, AWS Shield Advanced protections, and Amazon VPC security groups. AWS WAF is a web application firewall that helps protect web applications from common web exploits, such as SQL injection, cross-site scripting, and bot attacks.

Amazon Inspector is an automated security assessment service that helps improve the security and compliance of applications deployed on AWS. It analyzes the behavior of the applications and checks for vulnerabilities, exposures, and deviations from best practices.

NEW QUESTION # 446

Which AWS solution should the company use to meet this requirement?

- A. AWS AppSync
- B. AWS Service Catalog
- C. AWS software development kits (SDKs)
- D. AWS Config

Answer: B

Explanation:

AWS Service Catalog is a service that allows you to create and manage catalogs of IT services that are approved for use on AWS. You can use AWS Service Catalog to centrally manage commonly deployed IT services and help your organization achieve consistent governance and meet your compliance requirements, while enabling users to quickly deploy only the approved IT services they need. AWS Config is a service that enables you to assess, audit, and evaluate the configurations of your AWS resources. AWS software development kits (SDKs) are tools that enable you to easily integrate your applications with AWS services using your preferred programming language. AWS AppSync is a service that simplifies application development by letting you create a flexible API to securely access, manipulate, and combine data from one or more data sources. None of these services can help you limit your employees' AWS access to a portfolio of predefined AWS resources.

NEW QUESTION # 447

Which AWS database service provides in-memory data storage?

- A. Amazon RDS
- B. Amazon DynamoDB
- C. Amazon ElastiCache
- D. Amazon Timestream

Answer: C

Explanation:

The correct answer is B because Amazon ElastiCache is a service that provides in-memory data storage.

Amazon ElastiCache is a fully managed, scalable, and high-performance service that supports two popular open-source in-memory engines: Redis and Memcached. Amazon ElastiCache allows users to store and retrieve data from fast, low-latency, and high-throughput in-memory systems. Users can use Amazon ElastiCache to improve the performance of their applications by caching frequently accessed data, reducing database load, and enabling real-time data processing. The other options are incorrect because they are not services that provide in-memory data storage. Amazon DynamoDB is a service that provides key-value and document data storage. Amazon RDS is a service that provides relational data storage. Amazon Timestream is a service that provides time series data storage. Reference: Amazon ElastiCache FAQs

NEW QUESTION # 448

A company wants to migrate its on-premises data warehouse to AWS. The information in the data warehouse is used to populate analytics dashboards.

Which AWS service should the company use for the data warehouse?

- A. Amazon RDS
- B. Amazon Aurora
- C. Amazon ElastiCache
- **D. Amazon Redshift**

Answer: D

Explanation:

Explanation

The AWS service that the company should use for the data warehouse is Amazon Redshift. Amazon Redshift is a fully managed, petabyte-scale data warehouse service that is optimized for analytical queries. It can integrate with various data sources and business intelligence tools to provide fast and cost-effective insights.

Amazon Redshift also offers high availability, scalability, security, and compliance features. [Amazon Redshift Overview]

NEW QUESTION # 449

A company needs to identify who accessed an AWS service and what action was performed for a given time period.

Which AWS service should the company use to meet this requirement?

- A. Amazon CloudWatch
- B. AWS Security Hub
- **C. AWS CloudTrail**
- D. Amazon Inspector

Answer: C

Explanation:

Explanation

AWS CloudTrail is a service that enables governance, compliance, operational auditing, and risk auditing of your AWS account.

With CloudTrail, you can log, continuously monitor, and retain account activity related to actions across your AWS infrastructure.

You can use CloudTrail to identify who accessed an AWS service and what action was performed for a given time period. Amazon CloudWatch, AWS Security Hub, and Amazon Inspector are AWS services that provide different types of monitoring and security capabilities.

NEW QUESTION # 450

.....

It is known to us that our CLF-C02 study materials are enjoying a good reputation all over the world. Our study materials have been approved by thousands of candidates.
