2026 CompTIA Unparalleled Updated CLO-002 Dumps Pass Guaranteed

It Contains a pool of real CompTIA CLO-002 exam questions. This CompTIA Cloud Essentials+ Certification Exam (CLO-002) practice test is compatible with every windows-based system. One downloaded does not require an active internet connection to operate. You can self-evaluate your mistakes after each CLO-002 Practice Exam attempt and work on the weak points that require more attention.

CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q93-Q98):

NEW QUESTION # 93

Which of the following is the primary reason for distributing an application between different availability zones?

- A. Activating geo-redundancy
- B. Eliminating a single point of failure
- C. Achieving faster access to the application

- D. Having data closer to the user

Answer: B

Explanation:

Distributing an application across different availability zones primarily helps eliminate a single point of failure. By placing resources in multiple availability zones, the application can continue functioning even if one availability zone experiences an outage. This improves the application's availability and resilience, ensuring it remains operational despite potential failures in one zone.

NEW QUESTION # 94

Which of the following ITIL processes would manage the datacenter in a public cloud environment?

- A. Applications management
- **B. Information security management**
- C. Facilities management
- D. Technology management

Answer: B

NEW QUESTION # 95

An IT team documented the procedure for upgrading an existing IT resource within the cloud. Which of the following BEST describes this procedure?

- **A. Change management**
- B. Standard operating procedure
- C. Incident management
- D. Security procedure

Answer: A

Explanation:

Change management is the process of controlling the lifecycle of all changes to IT services, enabling beneficial changes to be made with minimum disruption and risk¹. Change management involves documenting, assessing, approving, implementing, and reviewing changes to IT resources, such as hardware, software, configuration, or capacity². Change management aims to ensure that changes are aligned with the business objectives, requirements, and expectations, and that they are delivered in a timely, efficient, and effective manner³.

A procedure for upgrading an existing IT resource within the cloud is an example of change management, as it describes the steps and actions needed to make a change to the cloud service. A procedure for upgrading an IT resource should include the following elements⁴:

The reason and objective for the upgrade

The scope and impact of the upgrade

The roles and responsibilities of the stakeholders involved in the upgrade The prerequisites and dependencies for the upgrade The schedule and timeline for the upgrade The risks and mitigation strategies for the upgrade The testing and validation methods for the upgrade The communication and notification plan for the upgrade The rollback and recovery plan for the upgrade The evaluation and feedback mechanism for the upgrade A security procedure is a set of rules and guidelines that define how to protect IT resources from unauthorized access, use, modification, or destruction⁵. A security procedure is not the same as a procedure for upgrading an IT resource, as it focuses on the security aspects of the IT service, rather than the change aspects.

An incident management is the process of restoring normal service operation as quickly as possible after an unplanned disruption or degradation. An incident management is not the same as a procedure for upgrading an IT resource, as it focuses on the incident aspects of the IT service, rather than the change aspects.

A standard operating procedure (SOP) is a document that provides detailed instructions on how to perform a routine or repetitive task or activity. A standard operating procedure is not the same as a procedure for upgrading an IT resource, as it focuses on the operational aspects of the IT service, rather than the change aspects.
