## Reliable Cybersecurity-Practitioner Exam Registration & Cybersecurity-Practitioner Actual Tests

The Palo Alto Networks Cybersecurity-Practitioner certification exam is an industrial-recognized Palo Alto Networks Cybersecurity Practitioner (Cybersecurity-Practitioner) certificate that is designed to validate candidates' skills, experience, and knowledge quickly. The Palo Alto Networks Cybersecurity Practitioner (Cybersecurity-Practitioner) certification exam has been inspiring Palo Alto Networks professionals since its beginning. Now this Cybersecurity-Practitioner certification exam has become solid proof of certain skills set and knowledge.

## Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q191-Q196):

### NEW QUESTION # 191

What is the purpose of host-based architectures?

- A. They share the work of both clients and servers.
- B. They allow client computers to perform most of the work.
- C. They divide responsibilities among clients.
- D. They allow a server to perform all of the work virtually.

**Answer: D**

Explanation:

In a host-based architecture, the server (host) handles all processing tasks, while the client mainly provides input/output. This centralizes control, processing, and data storage on the server, reducing the client's role to that of a terminal.

### NEW QUESTION # 192

SecOps consists of interfaces, visibility, technology, and which other three elements? (Choose three.)

- A. Business
- B. Understanding

- C. Processes
- D. People
- E. Accessibility

**Answer: A,C,D**

Explanation:

The six pillars include:

1. Business (goals and outcomes)
2. People (who will perform the work)
3. Interfaces (external functions to help achieve goals)
4. Visibility (information needed to accomplish goals)
5. Technology (capabilities needed to provide visibility and enable people)
6. Processes (tactical steps required to execute on goals)

All elements must tie back to the business itself and the goals of the security operations

### NEW QUESTION # 193

What are two functions of User and Entity Behavior Analytics (UEBA) data in Prisma Cloud CSPM? (Choose two.)

- A. Assessing severity levels
- B. Unifying cloud provider services
- C. Detecting and correlating anomalies
- D. Identifying misconfigurations

**Answer: A,C**

Explanation:

Assessing severity levels - UEBA data helps prioritize incidents by evaluating the risk and severity based on user and entity behavior.

Detecting and correlating anomalies - UEBA continuously analyzes activity to identify abnormal behavior and correlate anomalies that may indicate insider threats or compromised accounts.

### NEW QUESTION # 194

In which step of the cyber-attack lifecycle do hackers embed intruder code within seemingly innocuous files?

- A. delivery
- B. reconnaissance
- C. weaponization
- D. exploitation

**Answer: C**

Explanation:

"Weaponization: Next, attackers determine which methods to use to compromise a target endpoint. They may choose to embed intruder code within seemingly innocuous files such as a PDF or Microsoft Word document or email message."

### NEW QUESTION # 195

Which key component is used to configure a static route?

- A. routing protocol
- B. enable setting
- C. router ID
- D. next hop IP address

**Answer: D**

Explanation:

A static route is a manually configured route that specifies the destination network and the next hop IP address or interface to reach it. A static route does not depend on any routing protocol and remains in the routing table until it is removed or overridden. Static

routes are useful for defining default routes, reaching stub networks, or providing backup routes in case of link failures. To configure a static route in a virtual router on a Palo Alto Networks firewall, you need to specify the name, destination, interface, and next hop IP address or virtual router of the route. Reference: Configure a Static Route in Virtual Routers, Palo Alto Networks Certified Cybersecurity Entry-level Technician (PCCET), FREE Cybersecurity Education Courses

## NEW QUESTION # 196
