SPLK-1002 Exam covers a range of topics, including search fundamentals, search commands, transforming commands, data models, pivot, and dashboards.

Splunk Core Certified Power User Exam Sample Questions (Q86-Q91):

NEW QUESTION # 86

What is the purpose of a calculated field?

- A. To automatically add fields to the index using an eval expression rather than manually including an eval command.
- B. To manually add and remove fields at search time related to statistical functions.
- C. To manually add fields at search time and check for syntax errors.
- **D. To automatically add fields at search time using an eval expression rather than manually including an eval command.**

Answer: D

Explanation:

A calculated field in Splunk is designed to automatically add fields at search time using an eval expression.

This feature allows users to define new fields based on existing data without needing to manually include an eval command in every search. Calculated fields simplify repeated search tasks by embedding the eval logic directly into the field configuration.

NEW QUESTION # 87

During the validation step of the Field Extractor workflow:

Select your answer.

- **A. You can remove values that aren't a match for the field you want to define**
- B. You can validate where the data originated from
- C. You cannot modify the field extraction

Answer: A

NEW QUESTION # 88

Which of the following searches will return events containing a tag named Privileged?

- A. tag=Priv
- B. tag=priv*
- **C. tag=Priv***
- D. tag=privileged

Answer: C

Explanation:

The tag=Priv* search will return events containing a tag named Privileged, as well as any other tag that starts with Priv. The asterisk (*) is a wildcard character that matches zero or more characters. The other searches will not match the exact tag name.

NEW QUESTION # 89

Brad created a tag called "SpecialProjectX". It is associated with several field/value pairs, such as team=support, location=Austin, and release=Fuji. What search should Brad run to filter results for SpecialProjectX events related to the Support Team?

- A. tag::Support-SpecialProjectX
- B. tag=SpecialProjectX
- C. tag:team=SpecialProjectX
- D. tag!=Fuji,Austin

Answer: C

Explanation:

Tags in Splunk allow users to assign multiple field-value pairs to a common label.

The correct syntax to filter by tag is tag:<field>=<tag_name>.

tag:team=SpecialProjectX will filter results where team=support is associated with the tag SpecialProjectX.

tag=SpecialProjectX searches for all events associated with SpecialProjectX, not just the support team.

tag:Support-SpecialProjectX is incorrect syntax.

tag!=Fuji,Austin is incorrect since it does not filter using the SpecialProjectX tag.

NEW QUESTION # 90

Which of the following searches would create a graph similar to the one below?

index=_internal sourcetype=SavedSplunker | fields sourcetype, status |

- A. None of these searches would generate a similar graph.
- B. transaction status maxspan=1d | stats count by status
index=_internal sourcetype=SavedSplunker | fields sourcetype, status |
- C. transaction status maxspan=1d | chart count OVER status by _time
index=_internal sourcetype=SavedSplunker | fields sourcetype, status |
- D. transaction status maxspan=1d | timechart count by status

Answer: A

Explanation:

None of these functions related to the graph in exhibit. All of these functions have maxspan=1d which is not a valid argument.
