Reliable CDCS-001 Test Duration, CDCS-001 Interactive Questions

The experts and professors of our company have designed the three different versions of the CDCS-001 study materials, including the PDF version, the online version and the software version. Now we are going to introduce the online version for you. There are a lot of advantages about the online version of the CDCS-001 Study Materials from our company. For instance, the online version can support any electronic equipment and it is not limited to all electronic equipment.

GAQM CDCS-001 (Certified Data Centre Specialist (CDCS)) Certification Exam is a globally recognized certification program designed for professionals who are responsible for the management, design, and operation of data centres. Certified Data Centre Specialist (CDCS) certification program is ideal for individuals who are looking to enhance their knowledge and skills in the field of data centre management and operations.

GAQM CDCS-001 (Certified Data Centre Specialist) Certification Exam is a valuable certification for professionals in the data centre management industry. It evaluates individuals' knowledge and skills in critical areas of data centre management, including infrastructure design, power and cooling, and security. Certified Data Centre Specialist (CDCS) certification can lead to better job opportunities, higher salaries, and career growth.

GAQM Certified Data Centre Specialist (CDCS) Sample Questions (Q25-Q30):

NEW QUESTION # 25

For which one of these processes is Direct Current essential, and will not work with alternating current?

- **A. Electrolysis**
- B. Heating
- C. Lighting
- D. Turning a motor

Answer: A

Explanation:

Direct Current (DC) is essential for the process of electrolysis. Electrolysis is the process of breaking down a compound using an electric current. The electric current causes ions to move, which results in a chemical reaction that breaks down the compound. In order for electrolysis to work, a direct current is required, as the ions must flow in one direction. Alternating Current (AC) changes direction and would not provide a consistent flow of ions.

Heating, lighting, and turning a motor can be done by either DC or AC. Heating can be done by passing an electric current through a heating element, which can be powered by either DC or AC. Lighting can be done by passing an electric current through a light bulb, which can be powered by either DC or AC. A motor can be powered by either DC or AC, but the type of motor and the application will determine which type of current is more suitable.

NEW QUESTION # 26

Whenever electrical power is being consumed in an IT room or data center, _____ is generated.

- **A. Heat**
- B. Condensation
- C. Static electricity
- D. Humidity

Answer: A

Explanation:

Whenever electrical power is being consumed in an IT room or data center, heat is generated. This heat must be removed in order to maintain an optimal temperature for the equipment, and this is usually done through cooling systems such as air conditioning, air economization, liquid cooling, evaporative cooling, and immersion cooling.

NEW QUESTION # 27

A grounding wire is connected to the metal case of an appliance.

- **A. True**
- B. False

Answer: A

NEW QUESTION # 28

Which one of the following is an advantage of Air Cooled Self-Contained System?

- A. All components contain more than one unit
- **B. It doesn't require ductwork and/or dropped ceiling**
- C. Lowest installation cost
- D. It has more heat removal capacity per unit

Answer: B

Explanation:

Air cooled self-contained systems are highly efficient and do not require ductwork and/or dropped ceiling for installation. This makes them a great choice for locations where installation costs are a major factor, such as in residential applications, or in places with limited space. Additionally, air cooled self-contained systems have more heat removal capacity per unit compared to water cooled systems, making them more cost-effective in the long run.

NEW QUESTION # 29

Every air distribution system has a _____ system and a _____ system

- A. Supply, Release
- B. Supply, Reverse
- C. Maintenance, Regulation
- **D. Supply, Return**

Answer: D

Explanation:

Explanation

Every air distribution system has a supply system, which delivers conditioned air to the space, and a return system, which collects the air from the space and returns it to the air handling unit. The return system is responsible for providing the necessary negative pressure in the space to ensure proper air circulation.

NEW QUESTION # 30

.....

We provide a wide range of learning and preparation methodologies to the customers for the CDCS-001 complete training. After using the CDCS-001 products, success would surely be the fate of customer because, self-evaluation, highlight of the mistakes, time management and sample question answers in comprehensive manner, are all the tools which are combined to provide best possible results. We are also offering 100% money back guarantee to the customers in case they don't achieve passing scores in the GAQM CDCS-001 in the first attempt.
