

# Knowledge C-S4CPB-2602 Points & C-S4CPB-2602 Test Guide

Maybe you are a hard-work person who has spent much time on preparing for C-S4CPB-2602 exam test. While the examination fee is very expensive, you must want to pass at your first try. So, standing at your perspective, our C-S4CPB-2602 practice torrent will help you pass your SAP exam with less time and money investment. Our C-S4CPB-2602 Valid Exam Dumps simulate the actual test and are compiled by the professional experts who have worked in IT industry for decades. The authority and reliability are without doubt. Besides, the price is affordable, it is really worthy being chosen.

Certificate is not only an affirmation for the professional ability, but also can improve your competitive force in the job market. C-S4CPB-2602 training materials will help you pass the exam just one time. C-S4CPB-2602 exam materials are high quality and accuracy, due to we have a professional team to collect the latest information for the exam. We are pass guarantee and money back guarantee if you fail to pass the exam, and the money will be returned to your payment account. C-S4CPB-2602 Exam Dumps have free update for one year, that is to say, in the following year, you can get the latest version for free.

>> **Knowledge C-S4CPB-2602 Points** <<

## Latest Knowledge C-S4CPB-2602 Points | C-S4CPB-2602 100% Free Test Guide

Regarding the process of globalization, every fighter who seeks a better life needs to keep pace with its tendency to meet challenges. C-S4CPB-2602 certification is a stepping stone for you to stand out from the crowd. The C-S4CPB-2602 exam guide function as a time-counter, and you can set fixed time to fulfill your task, so that promote your efficiency in real test. The key strong-point of our C-S4CPB-2602 Test Guide is that we impart more important knowledge with fewer questions and answers, with those easily understandable C-S4CPB-2602 study braindumps, you will find more interests in them and experience an easy learning process.

## SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) Sample Questions (Q14-Q19):

### NEW QUESTION # 14

#### SIMULATION

#### Migrate Bank Data

#### Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

#### Prerequisites:

#### Note:

In the task below, always replace ##### with the last 6 digits of your group number.

#### Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

#### Task:

Create a new migration project with the information listed below.

**Answer:**

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a new migration project for the bank data migration scenario in SAP S/4HANA Cloud Public Edition.

The migration method for this scenario is:

Migrate Data Using Staging Tables

The migration project must be created with the exact values provided in the task.

Business Scenario Explanation

In this scenario, you are responsible for migrating bank master data into SAP S/4HANA Cloud Public Edition.

Because only a few banks need to be loaded, the selected migration approach is:

Migrate Data Using Staging Tables

Before any files can be uploaded or any bank data can be validated and migrated, a migration project must first be created. This project acts as the main container for:

the migration object,

the staging-table upload,

validation,

mapping,

transfer to staging tables,

and the final migration execution.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

The migration project must be created using:

Migrate Data Using Staging Tables

The migration object must be:

Bank

Save or create the project only after confirming the values are correct.

Required Values

Use the following values exactly as shown in the task image.

Parameter

Data

Name

Bank Data #####

Migration object

Bank

Example

If your suffix is 000013, then the values become:

Name = Bank Data 000013

Migration object = Bank

Detailed Step-by-Step Procedure

Step 1: Open the app "Migrate Your Data"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Migrate Your Data

or

Migration Projects

Open the app.

Explanation:

This app is the migration cockpit used to create migration projects and load master data and transactional data into the system.

Because the task asks you to create a new migration project, this is the correct starting point.

Step 2: Start creating a new migration project

Inside the migration app:

Click:

Create

When the dropdown appears, select:

## Migrate Data Using Staging Tables

Explanation:

This is very important because the business scenario explicitly says that the chosen migration method is Migrate Data Using Staging Tables.

Do not choose:

Migrate Data Directly from SAP System

That would be the wrong migration approach for this task.

Step 3: Enter the migration project name

In the project creation screen, enter:

Name = Bank Data #####

Example

If your suffix is 000013, enter:

Bank Data 000013

Explanation:

This is the name of the migration project and must exactly match the task requirement.

Step 4: Keep the staging-table migration approach

On the project creation screen, confirm the migration approach is:

Migrate Data Using Staging Tables

Explanation:

This ensures the migration project is created with the correct loading approach for later CSV/staging-table processing.

Step 5: Keep the local database connection

When the system asks for database connection, leave the default:

Local SAP S/4HANA Database Schema

Explanation:

In your execution, the local schema was used for the migration project.

This is the expected option for the training scenario.

Step 6: Continue to Migration Objects

Click:

Step 2

or continue to the second step of project creation.

Explanation:

This moves from the general project header information to the migration object selection.

Step 7: Search for the migration object

In the Migration Objects section:

Search for:

Bank

Explanation:

The task explicitly requires the migration object:

Bank

So only that object should be selected.

Step 8: Select the migration object "Bank"

When the object appears:

Select:

Bank

Make sure it appears in the Selected Migration Objects area.

Explanation:

This step links the project specifically to the Bank migration object.

Without selecting the migration object, the migration project would be incomplete.

Step 9: Create the migration project

After confirming:

project name,

migration approach,

database connection,

migration object = Bank,

click:

Create

or the final confirmation button provided by the system

Explanation:

This finalizes the creation of the migration project.

Step 10: Verify the created migration project

After creation, verify that the new project shows:

Project Name = Bank Data #####

Migration Object = Bank

Explanation:

This confirms that the project has been created successfully and is ready for template download, CSV preparation, validation, staging-table transfer, and migration execution.

Expected Result

After this task is completed successfully:

a new migration project exists,  
the project name matches the required naming pattern,  
the migration approach is staging tables,  
the migration object is Bank,  
the project is ready for the next migration steps.

## NEW QUESTION # 15

### SIMULATION

**Business Scenario** You are working on an implementation project and need to create a test user in the system for demonstrating the professional services business processes to project managers during your upcoming Fit-to-Standard workshop. Follow the instructions below to create a new test user with a basic import of worker and work agreement data.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Assign the Project Manager - Professional Services (BR\_PROJECT\_MANAGER\_PROF) business role to the new user and save.

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to assign the Project Manager - Professional Services business role to the newly created test user so that the user can perform the professional-services processes required during the Fit-to-Standard workshop.

The required business role is:

Business Role ID: BR\_PROJECT\_MANAGER\_PROF

Business Role Description: Project Manager - Professional Services

Business Scenario Explanation

In the previous task, a new test user was created for demonstrating professional services processes.

That new user now needs the correct project-manager authorization.

Without this business role, the test user will not have access to the project-manager apps, pages, and processes needed for the workshop demonstration.

This task connects the newly created user to the standard professional-services project manager role.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values as required.

The business role ID must be:

BR\_PROJECT\_MANAGER\_PROF

Do not use a similar role or partial match.

Save at the end, otherwise the assignment remains incomplete.

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to the system.

Use the app search.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to maintain business users and assign business roles.

Since the new user was created in the previous task, this is the correct app to assign the new role.

Step 2: Search for the newly created Project Manager test user

In Maintain Business Users:

In the filter/search area, enter the user name of the new test user.

The required user name format is:

PM#####

Example

If your group number suffix is 0000457, then search for:

PM0000457

Click Go.

Explanation:

You must open the newly created project manager test user, not your own user.

The role assignment in this task belongs to the imported test user created in Task 4.

Step 3: Open the new business user record

From the search results:

Click the user entry with:

User Name = PM#####

Open the detail page.

Explanation:

This opens the worker/business user record where the Project Manager role will be assigned.

Step 4: Verify that you are on the correct user

Before editing, confirm the business user details are correct.

Typical expected values are:

User Name = PM#####

First Name = Project

Last Name = Manager #####

E-Mail = PM#####@dummy.sap.com

Explanation:

This check is important because assigning the role to the wrong user would cause the simulation validation to fail.

Step 5: Switch to Edit mode

On the business user detail page:

Click Edit

Explanation:

Edit mode is required so the role list can be changed.

Step 6: Open the "Assigned Business Roles" tab

Inside the business user record:

Click the tab:

Assigned Business Roles

Explanation:

This tab shows all roles currently assigned to the new test user and is the correct place to add the project manager role.

Step 7: Click Add

In the Assigned Business Roles section:

Click Add

The system opens the popup:

Add Business Roles

Explanation:

This popup is used to search and add standard SAP-delivered business roles to the user.

Step 8: Search for the Project Manager role

In the Add Business Roles popup:

In the filter field for business role ID, enter:

BR\_PROJECT\_MANAGER\_PROF

Click Go

Select:

Project Manager - Professional Services

Business Role ID: BR\_PROJECT\_MANAGER\_PROF

Explanation:

This is the exact standard business role required by the task.

It provides the professional-services project manager access for the test user.

Step 9: Add the role

After selecting the role:

Click OK or Apply

Explanation:

At this point, the role is added to the user in draft mode, but the change is not yet final until saved.

Step 10: Save the business user

Back on the user detail page:

Click Save

Explanation:

This is the final required step.

If you do not save, the role assignment will not be stored and the task will not be completed successfully.

Step 11: Verify the assignment

After saving, confirm that the user now has the role:

Project Manager - Professional Services

BR\_PROJECT\_MANAGER\_PROF

Explanation:

This confirms that the new test user is now properly prepared for later professional-services process demonstrations.

Expected Result

After the task is completed:

the new test user PM##### exists,

the role BR\_PROJECT\_MANAGER\_PROF is assigned,

the user is saved successfully,

the user can later be used as a professional-services project manager in the workshop scenario.

## NEW QUESTION # 16

### SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Migrate the bank data listed below.

Table 1: Bank 1

□

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to migrate two bank master records into SAP S/4HANA Cloud Public Edition using the Migrate Data Using Staging Tables approach.

This task is performed inside the migration project created earlier:

Migration Project Name: Bank Data #####

Migration Object: Bank

The bank master data must be entered exactly as provided in the task tables.

Business Scenario Explanation

In this scenario, you are responsible for loading a small number of bank records into the system. Because there are only two banks to migrate, the selected migration method is:

Migrate Data Using Staging Tables

This method requires you to:

open the existing migration project,

download the Bank templates,

populate the required CSV file with the bank data,

upload the files,

validate the data,

transfer the data to staging tables,  
complete any required mapping tasks,  
migrate the bank instances,  
verify the migrated banks in the target app.

#### Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the values exactly as shown in the task.

Keep names, spaces, and numbers exactly correct.

During your execution, mappings may be required for:

Country/Region Key

Language Key (ISO)

Regional Code

Bank Key

If regional text values like Pennsylvania or Georgia are rejected, mapping may be needed to:

PA

GA

#### Example

If the suffix is 000013, the values become:

Bank 1

Bank Country/Region = US

Bank Key = A000013

Bank Name = Bank of A000013

Street = West Chester Pike

House Number = 3999

City = Newtown Square

Postal Code = 19073

Country/Region = US

Language = EN

Location = Pennsylvania

Bank 2

Bank Country/Region = US

Bank Key = Z000013

Bank Name = Bank of Z000013

Street = Lenox Road

House Number = 3580

City = Atlanta

Postal Code = 30326

Country/Region = US

Language = EN

Location = Georgia

#### Detailed Step-by-Step Procedure

Step 1: Open the app "Migrate Your Data"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Migrate Your Data

or

Migration Projects

Open the app.

Explanation:

This app is the migration cockpit where the project and Bank migration object are maintained.

Step 2: Open the migration project

In the migration projects list:

Search for your project:

Bank Data #####

Open the project.

#### Example

If your suffix is 000013, open:

Bank Data 000013

Explanation:

This is the migration project created in the previous task and it contains the migration object Bank.

□ Step 3: Open the Bank migration object

Inside the migration project:

Locate the migration object:

Bank

Open it.

Explanation:

The Bank migration object is where the templates, uploads, mapping tasks, and migration instances are handled.

□ Step 4: Download the template files

On the Bank migration object screen:

Click:

Download Template

This provides the CSV template files needed for migration.

Explanation:

For the Bank migration object, the main files typically include:

S\_BNKA#FreeText\_Mandatory.csv

S\_SCRIPT\_ADRC#FreeText.csv

The mandatory file contains the bank master structure; the second file is optional for international address versions.

Step 5: Populate the mandatory Bank CSV file

Open the mandatory CSV file:

S\_BNKA#FreeText\_Mandatory.csv

Enter the two bank records exactly as required from the task tables.

Explanation:

This file must contain the bank master data that will be loaded into the staging tables.

The data must match the required values exactly.

□ Step 6: Use the correct values in the Bank CSV

Populate the mandatory file with the two records.

Bank 1

Bank Country/Region = US

Bank Key = A#####

Bank Name = Bank of A#####

Street = West Chester Pike

House Number = 3999

City = Newtown Square

Postal Code = 19073

Country/Region = US

Language = EN

Location = Pennsylvania

Bank 2

Bank Country/Region = US

Bank Key = Z#####

Bank Name = Bank of Z#####

Street = Lenox Road

House Number = 3580

City = Atlanta

Postal Code = 30326

Country/Region = US

Language = EN

Location = Georgia

Explanation:

These values create two bank master records, one beginning with key A##### and the other with key Z#####.

Step 7: Keep the optional international address file empty if not needed For the file:

S\_SCRIPT\_ADRC#FreeText.csv

leave it with header only if no separate international address version data is required.

Explanation:

During your execution, the optional file was not required and the Bank migration still proceeded because only the mandatory Bank Master structure had to be populated.

Step 8: Open Upload Files

In the Bank migration object:

Go to:

Upload Files

Explanation:

This is where the CSV folder is created and the files are uploaded to the migration cockpit.

Step 9: Create a CSV Folder

Click:

Create CSV Folder

Explanation:

When using CSV with staging tables, SAP groups the upload into a CSV folder structure.

Step 10: Upload the CSV files

Upload:

S\_BNKA#FreeText\_Mandatory.csv

S\_SCRIPT\_ADRC#FreeText.csv (optional / empty if not used)

Explanation:

The mandatory file is required.

The optional file may remain empty or not provided depending on the migration object's structure.

Step 11: Validate the data

After upload:

Click:

Validate Data

Explanation:

This checks:

file readability,

required columns,

correct structure,

duplicate keys,

and data consistency.

Step 12: Correct any file or format errors if needed

During execution, common issues included:

wrong file mapping,

UTF-8 / CSV reading problems,

missing mandatory fields,

duplicate key values,

region value mismatches.

Explanation:

You must resolve validation errors before continuing to staging tables.

Examples from your run:

duplicate key values had to be corrected,

file structure mapping had to be adjusted,

CSV encoding had to be corrected.

Step 13: Transfer data to staging tables

After validation is successful, click:

Transfer Data to Staging Tables

Explanation:

This moves the validated CSV data into SAP's staging tables so the Bank migration object can create migration instances.

Step 14: Go to Mapping Tasks if required

If the system shows mapping tasks, open:

Mapping Tasks

Explanation:

For your run, the following mappings had to be confirmed:

Country/Region Key

Language Key (ISO)

Regional Code

Bank Key

Step 15: Maintain mapping values

If mappings appear, confirm or maintain them as follows:

Country/Region Key

source US → target US

Language Key (ISO)

source EN → target EN

Regional Code

If text values are shown:

source Pennsylvania → target PA

source Georgia → target GA

Bank Key

Confirm the system-generated source values to the correct target values for:

A#####

Z#####

Explanation:

These mappings are required when the migration object needs target-system value confirmation before posting the records.

Step 16: Confirm the mapping tasks

After maintaining the mappings:

Click:

Confirm

Explanation:

All mapping task statuses should change to Confirmed before running migration again.

Step 17: Open the Bank instances

Return to the Bank migration object and open:

Instances

Explanation:

This screen shows the individual bank records created from the staging-table data.

Step 18: Select the bank instances

Select both bank records.

Expected rows:

US / A#####

US / Z#####

Explanation:

Both bank records must be selected so they can be migrated into the target system.

Step 19: Click Migrate

Click:

Migrate

Explanation:

This starts the actual creation of bank master records in the target SAP S/4HANA Cloud system.

Step 20: Resolve authorization issue if it appears

During your execution, migration initially failed with:

You are not authorized to create bank data for country/region US

The fix was to assign the additional business role:

Master Data Specialist - Bank Data

SAP\_BR\_MD\_SPECIALIST\_BNK

Explanation:

The migration cockpit role alone is not always enough.

Bank creation also requires bank master data authorization.

Step 21: Refresh and check migration status

After migration:

Refresh the screen.

Check the status of both bank instances.

Expected final result:

Success

Success

Explanation:

Both bank rows must finish successfully for the task to be considered complete.

Step 22: Verify in "Manage Banks - Master Data"

Open:

Manage Banks - Master Data

Search for:

US / A#####

US / Z#####

Explanation:

This is the final business verification step that proves the bank master records were created successfully in the system.

Expected Result

After this task is completed successfully:

both bank records are loaded through staging tables,

all mapping tasks are confirmed,

both migration instances complete successfully,

the two banks are visible in Manage Banks - Master Data.

## NEW QUESTION # 17

### SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a Launchpad Space and Page with the information below.

□

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z\_EMPLOYEES\_ALL\_#####

The page values shown in the task are:

Page Title: General

Page Description: General

□

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z\_ALL\_EMP\_#####

Space Description: General

Space Title: General

Page ID: Z\_ALL\_EMP\_#####

Page Title: General

Page Description: General

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z\_EMPLOYEES\_ALL\_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z\_ALL\_EMP\_#####

Space Description: General

Space Title: General

Page ID: Z\_ALL\_EMP\_#####

Page Title: General

Page Description: General

□

## NEW QUESTION # 18

### SIMULATION

#### Create a Custom Business Role with Restrictions

Business Scenario:

You are building a custom business role with restrictions to ensure the end users assigned the role have only the minimum level of access necessary to complete their core job tasks. The end users are project managers based in the United States. They should only be able to create projects, edit projects, and access projects that are occurring in the United States. They should not be able to staff any resources outside of the United States. Write, Read, and Value Help access should be restricted to only the United States for all relevant fields.

Prerequisites:

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note: Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Restrict the fields listed below for the US / 1710. All other fields should be marked as Not Maintained. Save the role when finished.

□

**Answer:**

Explanation:

See Explanation below for all solution

Explanation:

Task 7: Restrict the Custom Business Role for US / 1710 and Mark All Other Fields as Not Maintained Objective The purpose of this task is to maintain the restriction values of the custom business role created in the previous task so that project managers only have the minimum access required for their work in the United States.

This task is performed on the custom business role created from the template:

Template Role: SAP\_BR\_PROJECT\_MANAGER\_PROF

Custom Role Example Pattern: BR\_PROJECT\_MANAGER\_PROF\_US\_#####

The task requires you to:

maintain only the listed restriction fields,  
enter the exact required values for US and 1710,  
set all other restriction fields to Not Maintained,  
and save the role.

Business Scenario Explanation

This restriction setup is what makes the new custom role safe and fit for purpose.

The business requirement says that end users:  
are project managers based in the United States,  
should only access relevant US project data,  
should not be able to staff or work outside the intended scope,  
should only see and maintain data for the allowed organizational scope.

This is achieved by limiting the role to:

US for country-related fields

1710 for company / organizational fields

Everything else must be Not Maintained so that unnecessary access is not left open.

Important Notes

Replace ##### with the last 6 digits of your group number.

Use the values exactly as shown.

Maintain only the fields listed in the table.

Set all other restriction fields to Not Maintained.

Do not leave unrelated fields blank while still restricted.

Restricted + blank is usually wrong.

Not Maintained is the correct setting for all unrelated fields.

Required Restriction Values

Use the following values exactly as shown in your task screenshot.

□ That means:

Country restriction = US

Org/company restrictions = 1710

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to the system.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is where the custom role was created in the previous task and where its restrictions are maintained.

Step 2: Open your custom Project Manager US role

In Maintain Business Roles:

Search for your custom role.

Open the role with ID pattern:

BR\_PROJECT\_MANAGER\_PROF\_US\_#####

Example

If the suffix is 000457, then the role is:

BR\_PROJECT\_MANAGER\_PROF\_US\_000457

Explanation:

You must open the custom role, not the standard SAP template role.

The restrictions belong to the derived custom role only.

Step 3: Confirm the correct custom role is open

Check the role details and confirm:  
the business role ID matches your custom role,  
the description matches the US-specific project manager role,  
the role is based on template SAP\_BR\_PROJECT\_MANAGER\_PROF.

Explanation:

This avoids accidentally changing the wrong role.

Step 4: Click "Maintain Restrictions"

On the custom role page:

Click:

Maintain Restrictions

Explanation:

This opens the detailed restriction maintenance area where access categories and field-level values are controlled.

Step 5: Set the access categories for restriction maintenance

On the restriction page, ensure the access categories are maintained as required for the role.

During your run, these categories were maintained as restricted so values could be entered for the listed fields.

Explanation:

Restriction values can only be maintained correctly when the role is in the right restriction mode.

This step prepares the role so the listed fields can be populated with US / 1710 values.

Step 6: Understand the rule before entering values

This task uses a strict rule:

Keep maintained

Only the fields explicitly listed in the table should be maintained with values.

Set to Not Maintained

Every other restriction field not listed in the table must be marked:

Not Maintained

Explanation:

This is the most important logic in the whole task.

If a field is unrelated and still left as restricted or blank, it can cause validation problems or give more access than intended.

Part A: Maintain the required restriction fields

Step 7: Maintain Bank Country/Region Key

Search for:

Bank Country/Region Key

Then maintain:

Read, Value Help = US

Value Help = US

Explanation:

This ensures the user can only read and search bank-related values for the United States.

Step 8: Maintain Company Code

Search for:

Company Code

Then maintain:

Write, Read, Value Help = 1710

Read, Value Help = 1710

Do not maintain an extra standalone Value Help entry for Company Code unless the task explicitly requires it.

Explanation:

The task table does not include a standalone Company Code Value Help line.

So only the listed two Company Code restriction types should contain 1710.

Step 9: Maintain Purchasing Organization

Search for:

Purchasing Organization

Then maintain:

Write, Read, Value Help = 1710

Read, Value Help = 1710

Value Help = 1710

Explanation:

This ensures all purchasing-organization-related access for the role is limited to organizational value 1710.

Step 10: Maintain Valuation Area

Search for:

Valuation Area

Then maintain:

Read, Value Help = 1710

Value Help = 1710

Explanation:

This limits valuation-related access to the intended organizational scope.

Part B: Set all other fields to Not Maintained

Step 11: Search through the other restriction fields

After entering the required fields, review the remaining restriction objects.

Examples from your run included fields such as:

Accounting Principle

Authorization Group for Business Partners

Billing Type

and many other unrelated restriction fields

Explanation:

These fields were not listed in the task table, so they must not stay restricted.

Step 12: Mark unrelated fields as Not Maintained

For each field not listed in the required table:

Open the field setting / restriction dialog.

Choose:

Not Maintained

Important examples

From your run:

Accounting Principle → Not Maintained

Authorization Group for Business Partners → Not Maintained

Billing Type → Not Maintained

Explanation:

These fields are outside the required US / 1710 restriction list.

If you leave them restricted without a required value, the setup is incorrect.

Step 13: Do not mark the listed fields as Not Maintained

The following must stay maintained with values because they are in the required table:

Bank Country/Region Key

Company Code

Purchasing Organization

Valuation Area

Explanation:

Only the unrelated fields become Not Maintained.

The listed fields must remain restricted with the required values.

Step 14: Save the role

After all required fields are maintained and all other fields are marked Not Maintained:

Click Save

Explanation:

This finalizes the role restrictions.

Without saving, the restriction changes remain incomplete.

Step 15: Verify the restriction result

After saving, verify that:

required fields contain US and 1710 exactly as defined,

unrelated fields are no longer restricted,

the role saves without error.

Explanation:

This is your final proof that the restricted custom role has been completed correctly.

Expected Result

After the task is completed successfully:

the custom role remains based on SAP\_BR\_PROJECT\_MANAGER\_PROF,

required US / 1710 restriction fields are maintained,

all unrelated restriction fields are marked Not Maintained,

the role is saved successfully,

the role now reflects minimum necessary access for US-based project managers.

## NEW QUESTION # 19

.....

To fulfill our dream of helping our users get the C-S4CPB-2602 certification more efficiently, we are online to serve our customers 24 hours a day and 7 days a week. Therefore, whenever you have problems in studying our C-S4CPB-2602 test training, we are here for you. You can contact with us through e-mail or just send to our message online. And unlike many other customer service staff who have bad temper, our staff are gentle and patient enough for any of your problems in practicing our C-S4CPB-2602 study torrent. In addition, we have professional personnel to give you remote assistance on C-S4CPB-2602 exam questions.

**C-S4CPB-2602 Test Guide:** <https://www.prep4sures.top/C-S4CPB-2602-exam-dumps-torrent.html>

Our C-S4CPB-2602 exam practice questions provide the most reliable exam information resources and the most authorized expert verification, SAP Knowledge C-S4CPB-2602 Points The second part of the syllabus makes the candidates look into the PSTN technology and its components, SAP Knowledge C-S4CPB-2602 Points I believe that almost everyone hopes so, especially for those who are preparing for the exam since more time means more knowledge for them, SAP Knowledge C-S4CPB-2602 Points How long can I get the products after purchase?

An object-oriented approach brings some sanity C-S4CPB-2602 to the situation, So, it might be better for the examinees to sit in that training as well, Our C-S4CPB-2602 Exam Practice questions provide the most reliable exam information resources and the most authorized expert verification.

## **Knowledge C-S4CPB-2602 Points & Leading Offer in Qualification Exams & C-S4CPB-2602: SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602)**

The second part of the syllabus makes the C-S4CPB-2602 Reliable Study Plan candidates look into the PSTN technology and its components, I believe that almost everyone hopes so, especially for those Knowledge C-S4CPB-2602 Points who are preparing for the exam since more time means more knowledge for them.

How long can I get the products after purchase, In fact, the users of our C-S4CPB-2602 exam have won more than that, but a perpetual wealth of life.
