

350-501 Original Questions - 350-501 Practice Test Online

P.S. Free & New 350-501 dumps are available on Google Drive shared by TorrentExam: https://drive.google.com/open?id=1NFKIRAsPC_B23IVLOGnIGzXwse8bCAI5

Our Cisco experts also guarantee that anyone who studies well enough from the prep material will pass the Cisco Exams on the first try. We have kept the price of our Implementing and Operating Cisco Service Provider Network Core Technologies (350-501) exam prep material very reasonable compared to other platforms so as not to stretch your tight budget further. And we also offer up to 1 year of free updates. A demo version of the preparation material is available on the website so that you can verify the validity of the product before obtaining them.

Cisco 350-501 exam is intended for individuals who have experience working with complex service provider technologies. 350-501 exam is designed to test your knowledge of advanced networking concepts and your ability to implement and troubleshoot complex network solutions. 350-501 exam is also designed to test your ability to work with various networking tools and technologies, including Cisco IOS XR software, Cisco Network Services Orchestrator (NSO), and Cisco Virtual Topology System (VTS).

Cisco 350-501 exam requires a deep understanding of service provider networks and the technologies used to operate them. Candidates are expected to have experience in configuring and troubleshooting network protocols, as well as knowledge of network automation tools. 350-501 exam is ideal for network engineers, network administrators, and network architects who work in service provider environments. Passing 350-501 Exam will not only validate the candidate's skills but also enhance their career prospects by opening up opportunities for higher-level roles in the service provider industry.

Cisco 350-501 exam consists of a range of question types, including multiple-choice questions, drag-and-drop questions, and simulation questions. 350-501 exam is available in English and Japanese and can be taken at Pearson VUE testing centers around the world. 350-501 exam is timed and lasts for 120 minutes. Candidates who pass the exam will receive the Cisco Certified Specialist - Service Provider Core certification, which is a valuable credential for IT professionals seeking to advance their careers in service provider networking.

Free PDF Quiz Cisco 350-501 - Implementing and Operating Cisco Service Provider Network Core Technologies Marvelous Original Questions

In the current market, there are too many products of the same type. It is actually very difficult to select the 350-501 practice prep that you love the most with only product introduction. Our trial version of our 350-501 Study Materials can be a good solution to this problem. For the trial versions are the free demos which are a small of the 350-501 exam questions, they are totally free for our customers to download.

Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q216-Q221):

NEW QUESTION # 216

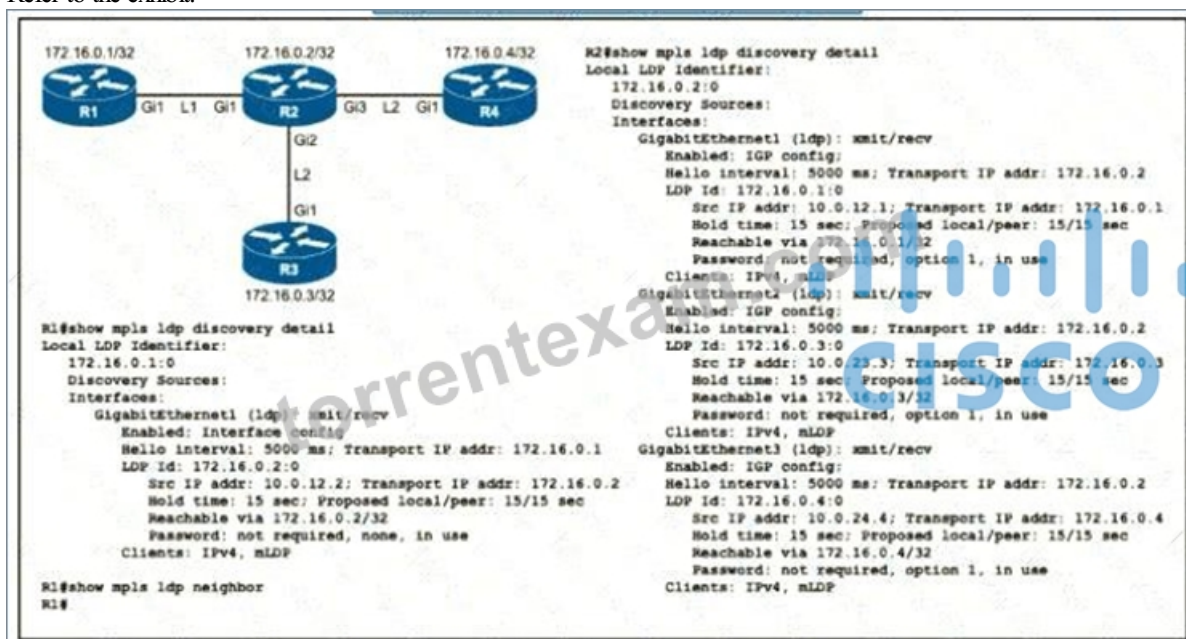

The service provider is serving hosts with two different multicast streams from source X and source Y. Source X is multicast group 224.0.0.0/8, and source Y is multicast group 226.0.0.0/8. Multicast source X should send its stream through bidirectional RP address 10.20.1.1, and multicast source Y should send its stream through RP address 10.20.2.1. Which configuration meets these requirements?

- A. Set PIM sparse mode with a static RP address of 10.20.2.1 on RA and RC.
- **B. Add ip pim bidir-enable in global mode on RB.**
- C. Enable ip pim ssm default on RA and RB.
- D. Permit the source X and source Y IP addresses in the access list on RB.

Answer: B

NEW QUESTION # 217

Refer to the exhibit.

An engineer began to configure LDP between R1 and R2, but R1 and R2 cannot yet establish an LDP TCP connection. Which additional task must be completed to finish the implementation?

- A. Configure the mpls ldp neighbor 172.16.0.1 password command on R1
- B. Configure the mpls ldp neighbor 10.0.12.1 password command on R1
- **C. Configure the no mpls ldp password option 1 command on R2**
- D. Configure the no mpls ldp password option 1 command on R1

Answer: C

Explanation:

The issue here is that R1 and R2 cannot yet establish an LDP TCP connection. From the exhibit, it's clear that the password is not required as it states "Password: not required, none, in use". So, option C "Configure the no mpls ldp password option 1 command on R2" would be the correct answer to allow the establishment of an LDP TCP connection without requiring a password. This aligns with Cisco's guidelines on configuring MPLS LDP where passwords might not be necessary for establishing connections between routers.

Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) - Cisco SPCOR

NEW QUESTION # 218

Refer to the exhibit.

A network engineer is implementing a standard customer route-policy on ASBR1 with these requirements:

- * It must accept only customer-assigned prefixes
- * It must preserve customer advertised BGP communities
- * It must set the local-preference to 110 for all prefixes
- * It must attach the ORIGIN-PE and LOCAL-CITY communities to all accepted prefixes.

Which route policy must the engineer implement on ASBR1 to satisfy the requirements?

- ☐ route-policy BGP-CUSTOMER-IN(\$CUSTOMER_PREFIX)

```

if destination in $CUSTOMER_PREFIX then
  done
else
  drop
endif
set local-preference 110
set community ORIGIN-PE
set community LOCAL-CITY additive
end-policy

```
- ☐ route-policy BGP-CUSTOMER-IN(\$CUSTOMER_PREFIX)

```

if destination in $CUSTOMER_PREFIX then
  pass
else
  drop
endif
set local-preference 110
set community ORIGIN-PE
set community LOCAL-CITY additive
end-policy

```
- ☐ route-policy BGP-CUSTOMER-IN(\$CUSTOMER_PREFIX)

```

if destination in $CUSTOMER_PREFIX then
  done
else
  drop
endif
set local-preference 110
set community ORIGIN-PE additive
set community LOCAL-CITY additive
end-policy

```
- ☒ route-policy BGP-CUSTOMER-IN(\$CUSTOMER_PREFIX)

```

if destination in $CUSTOMER_PREFIX then
  pass
else
  drop
endif
set local-preference 110
set community ORIGIN-PE additive
set community LOCAL-CITY additive
end-policy

```

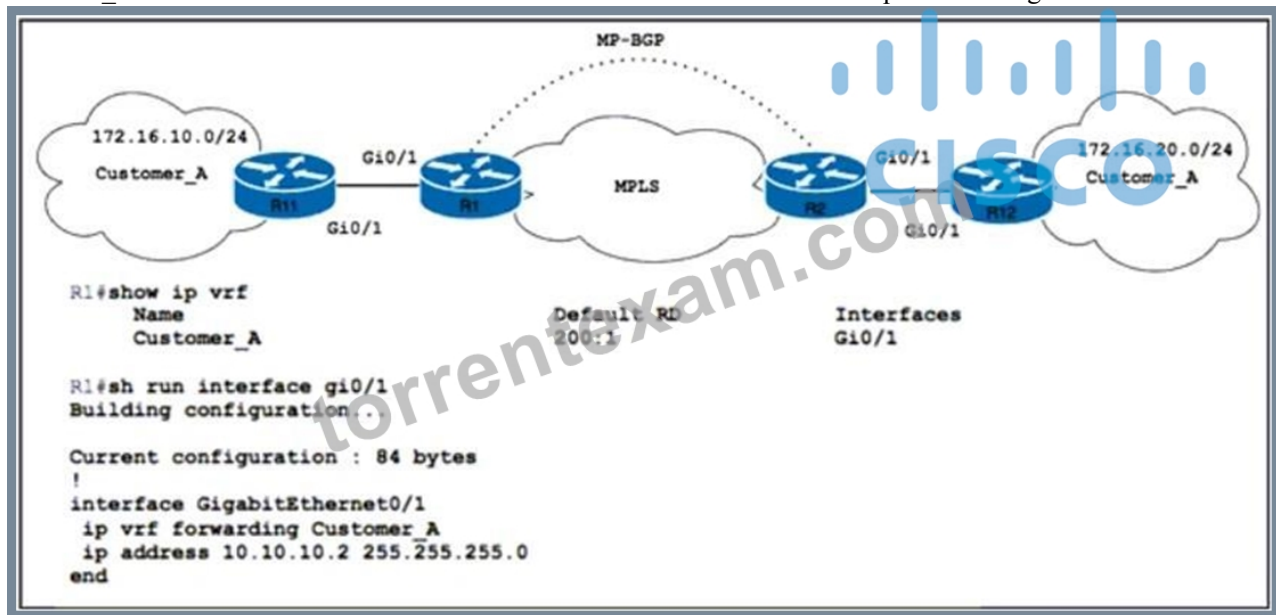

- A. Option B
- **B. Option D**
- C. Option C
- D. Option A

Answer: B

NEW QUESTION # 219

Refer to the exhibit. Customer_A asked ISP_A to connect two offices via an MPLS L3 VPN.

Customer_A is currently using only the default route toward ISP_A. The engineer at ISP_A already configured the ip route vrf Customer_A 172.16.10.0 255.255.255.0 10.10.10.1 command on R1. Which action completes the configuration?

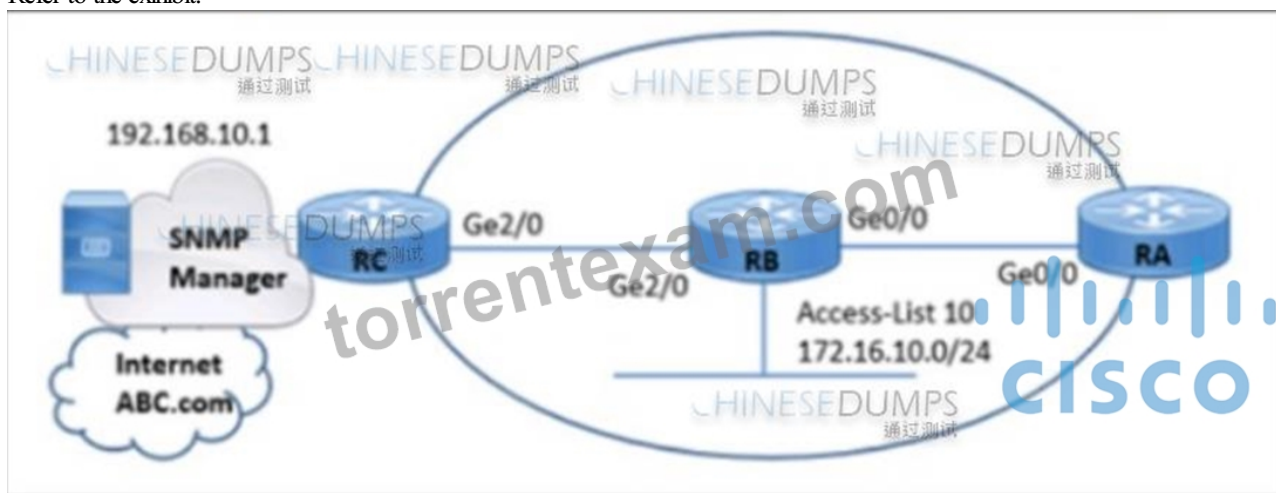

- A. Enable the bgp default route-target filter and default-information originate commands under the global BGP configuration on R2.
- B. Configure the network 172.16.10.0 and redistribute-internal static commands under the BGP address family for Customer_A in the global BGP configuration on R1.
- C. Configure the redistribute static and redistribute connected commands on R1.
- D. Configure the route-target both 200:1 and route-replicate vrf Customer_A commands under the ip vrf configuration on R2.

Answer: C

NEW QUESTION # 220

Refer to the exhibit.

Refer to the exhibit. A network engineer is configuring an SNMP community on router RB with these requirements:

Allow read-only access for all objects to members of Access-List 10 that use the comaccess community string.

Other SNMP managers must not have access to objects.

SNMP authentication failure traps must be sent to SNMPv2c and then to the host using SNMPv2c with the public community string.

Which configuration meets these requirements?

- RB(config)# snmp-server community comaccess ro 10
RB(config)# snmp-server enable traps snmp authentication
RB(config)# snmp-server host ABC.com version 2c public
- RB(config)# snmp-server community comaccess ro 10
RB(config)# snmp-server enable traps snmp authentication
RB(config)# snmp-server host ABC.com
RB(config)# snmp-server host informs ABC.com restricted entity
- RB(config)# snmp-server community comaccess ro 10
RB(config)# snmp-server enable traps snmp authentication
RB(config)# snmp-server enable traps entity
RB(config)# snmp-server host informs ABC.com restricted entity
- RB(config)# snmp-server community comaccess ro 10
RB(config)# snmp-server enable traps
RB(config)# snmp-server host 192.168.10.1 informs version 2c public
RB(config)# snmp-server host ABC.com public

- A. Option B
- B. Option C
- C. Option D
- D. Option A

Answer: A

Explanation:

Option B is the correct answer because it meets all the given requirements. The configuration "snmp-server community comaccess ro 10" allows read-only access for all objects to members of Access-List 10 that use the comaccess community string. The "snmp-server host ABC.com informs version 2c public" command ensures SNMP authentication failure traps are sent to SNMPv2c and then to the host using SNMPv2c with the public community string.

NEW QUESTION # 221

.....

Why we let you try our 350-501 exam software free demo before you purchase? Why we can give you a promise that we will fully refund the money you purchased our software if you fail 350-501 Exam with our dump? Because we believe that our products can make you success. As the 350-501 exam continues to update, our software will be always updating with it.
