*Attribute is a descriptive property, not a control structure.

NEW QUESTION # 19

Answer: C

Encryption ensures that files are securely transferred over the internet by making the data unreadable to unauthorized users during transmission.

*Compression reduces file size,

*Email is a method of transfer but not inherently secure without encryption.

NEW QUESTION # 21

A user receives a notification about a new software vulnerability. Which of the following is the best way to secure the software?

- A. Enabling authentication
- B. Configuring a firewall
- C. Uninstalling the program
- **D. Applying updates**

Answer: D

Explanation:

When a new vulnerability is discovered in software, the best way to secure it is by applying updates (patches) released by the software vendor. According to the CompTIA ITF+ objectives:

"Vendors regularly release software updates and security patches to fix vulnerabilities that could be exploited by attackers. Installing these patches promptly is crucial for maintaining system security." Although configuring a firewall and authentication improves overall security, they do not directly patch or fix the vulnerability. Uninstalling may be an option only if a patch is unavailable or the software is no longer needed. Therefore, the best and most proactive response is B: Apply updates.
