SAP Certified Associate - Validating Business Transformation Sample Questions (Q10-Q15):

NEW QUESTION # 10

What are the phases of a business transformation process?

- A. Discover, prepare, explore, realize, deploy, run
- B. Analyze, plan, execute, monitor
- C. Discover, plan, analyze, design, implement, operate
- D. Discover, plan, execute, deploy, evaluate, run

Answer: A

NEW QUESTION # 11

Which of the following are capabilities of SAP Cloud ALM for Operations? Note: There are 3 correct answers to this question.

- A. Roadmap Viewer
- B. Clean Core Governance
- C. Intelligent Event Processing
- D. Business Process Monitoring
- E. Business Service Management

Answer: C,D,E

NEW QUESTION # 12

What is the RISE with SAP Methodology Dashboard used for?

- A. Showing clean core status and extensibility KPIs
- B. Displaying ERP licensing data
- C. Displaying SAP S/4HANA roadmaps
- D. Managing project methodologies

Answer: A

Explanation:

The RISE with SAP Methodology Dashboard, also known as the Clean Core Dashboard, provides a centralized view of how closely a customer's SAP S/4HANA system adheres to clean core principles. It monitors system characteristics such as configuration quality, extensibility usage, custom code volume, upgrade readiness, and adherence to recommended SAP development patterns. This dashboard enables project and IT teams to identify potential risks, unnecessary modifications, and areas where the system may diverge from SAP's cloud-readiness standards.

By monitoring extensibility usage—such as in-app extensions, side-by-side development, and classic enhancements—the dashboard helps ensure the transformation project remains aligned with SAP's modern cloud principles. This is critical in safeguarding system longevity, reducing technical debt, and preparing systems for continuous innovation.

The dashboard does not display licensing data (A) or roadmaps (B). While it supports methodology enforcement, it does not "manage" methodologies directly (D). Instead, it provides visibility and governance around clean core adherence, helping ensure transformation activities remain within SAP-recommended boundaries.

NEW QUESTION # 13

What analysis does SAP Signavio support to compare company performance with peers?

- A. Value discovery
- B. Regression modelling
- C. Performance benchmarking
- D. SWOT analysis

Answer: C

Explanation:

SAP Signavio includes powerful benchmarking tools that allow organizations to compare their business process performance with internal and external peers. This capability, known as performance benchmarking, provides insights into how an organization's process KPIs—such as cycle times, automation rates, exception ratios, throughput, or backlog levels—measure up against industry standards or best-in-class performers. Performance benchmarking helps identify whether processes are lagging behind competitors or operating efficiently relative to market expectations.

Through SAP Signavio Process Insights and Process Intelligence, businesses can analyze large volumes of operational data to pinpoint where bottlenecks occur and identify root causes of inefficiency. Benchmarking goes beyond simple reporting by categorizing processes into performance segments and highlighting improvement potential. These insights are particularly valuable during transformation planning, as they guide prioritization and help justify investment decisions by quantifying the potential value of change.

Options A, B, and D do not represent benchmarking. Value discovery identifies opportunities, regression modeling is statistical analysis not used in this context, and SWOT is a strategic planning tool unrelated to system process analytics. Thus, performance benchmarking is the correct and recognized approach in SAP Signavio for comparing company performance with peers.

NEW QUESTION # 14

What tool is used for test automation within SAP Cloud ALM projects?

- A. Tricentis
- B. SAP WalkMe
- C. SAP Enable Now
- D. SAP Business Data Cloud

Answer: A

Explanation:

Tricentis Test Automation is directly integrated with SAP Cloud ALM to support automated testing. It provides codeless test creation, execution, and reporting for SAP and non-SAP processes. Within Cloud ALM, Tricentis handles automated regression scenarios, ensuring system stability during configuration changes and release cycles. Other tools listed focus on data management or end-user enablement, not automated testing.

NEW QUESTION # 15

.....

We will offer you the privilege of 365 days free update for C-SIGVT-2506 latest exam dumps. While, other vendors just give you 90 days free update. As a wise person, it is better to choose our C-SIGVT-2506 study material without any doubts.
