

# GH-200 Certification Torrent | GH-200 Test Dumps.zip

P.S. Free & New GH-200 dumps are available on Google Drive shared by PDFVCE: [https://drive.google.com/open?id=1fyOSRxCT6UV\\_pm8H2lv-Rn4wfnVH0mwQ](https://drive.google.com/open?id=1fyOSRxCT6UV_pm8H2lv-Rn4wfnVH0mwQ)

The client can try out and download our Microsoft GH-200 Training Materials freely before their purchase so as to have an understanding of our product and then decide whether to buy them or not. The website pages of our product provide the details of our GitHub Actions learning questions.

The passing rate of our GH-200 training quiz is 99% and the hit rate is also high. Our professional expert team seizes the focus of the exam and chooses the most important questions and answers which has simplified the important GH-200 information and follow the latest trend to make the client learn easily and efficiently. We update the GH-200 Study Materials frequently to let the client practice more. We provide the function to stimulate the GH-200 exam and the timing function of our GH-200 study materials to adjust your speed to answer the questions. You will pass the GH-200 exam easily.

## Pass Guaranteed Quiz Microsoft - Pass-Sure GH-200 Certification Torrent

Are you still worried that you haven't found GH-200 test dumps and review information? People around the world are likely to choose GH-200 certification exam. PDFVCE is the only learning website that can provide better GH-200 Certification Training materials. If you are still worried, you can download GH-200 free demo before purchasing our PDFVCE GH-200 certification training materials.

### Microsoft GH-200 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Consume Workflows: This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Author and Maintain Workflows:</b> This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Author and Maintain Actions:</b> This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.</li> </ul>

## Microsoft GitHub Actions Sample Questions (Q75-Q80):

### NEW QUESTION # 75

A development team has been using a Powershell script to compile and package their solution using existing tools on a Linux VM, which has been configured as a self-hosted runner. They would like to use the script as-is in an automated workflow. Which of the following should they do to invoke their script within a workflow step?

- A. Configure a self-hosted runner on Windows with the requested tools.
- B. Run the pwsh2bash command to convert the script so it can be run on Linux.
- **C. Use the YAML shell: pwsh in a run step.**
- D. Use the actions/run-powershell action to invoke the script.
- E. Use the YAML powershell: step.

**Answer: C**

Explanation:

Since the self-hosted runner is configured on a Linux VM and the script is written in PowerShell, you can invoke the script using the pwsh (PowerShell Core) shell in a run step in the workflow. This ensures that the script runs as-is on the Linux runner, as PowerShell Core (pwsh) is cross-platform and supports Linux.

### NEW QUESTION # 76

In which locations can actions be referenced by workflows? (Each correct answer presents a complete solution. Choose three.)

- A. the runs-on: keyword of a workflow file
- B. the repository's Secrets settings page
- **C. a public NPM registry**
- **D. a published Docker container image on Docker Hub**
- E. an .action extension file in the repository
- F. the same repository as the workflow
- **G. a separate public repository**

**Answer: C,D,G**

Explanation:

Adding an action to your workflow

You can add an action to your workflow by referencing the action in your workflow file. The actions you use in your workflow can be defined in:

[F] The same repository as your workflow file

[C] Any public repository

[B] A published Docker container image on Docker Hub

Note: Adding an action from the same repository [F]

If an action is defined in the same repository where your workflow file uses the action, you can reference the action with either the {owner}/{repo}@{ref} or ./path/to/dir syntax in your workflow file.

Reference:

### NEW QUESTION # 77

Which workflow commands send information from the runner? (Choose two.)

- A. setting output parameters
- B. setting a debug message
- C. reading from environment variables
- D. populating variables in a Dockerfile

**Answer: A,B**

Explanation:

Setting a debug message using `::debug::` command sends a message to the logs, helping with troubleshooting and providing insight into the workflow run.

Setting output parameters using `::set-output` sends data from a job step to subsequent steps or jobs, which can be used later in the workflow.

### NEW QUESTION # 78

As a developer, what options should you recommend to implement standards for automation reuse? (Choose two.)

- A. Store shared corporate actions in subfolders in a defined and documented internally accessible repository.
- B. Create reusable actions and workflows that can be called from other workflows.
- C. Create workflow templates and store them in the organization's `.github` repository.
- D. Create a marketplace partition to publish reusable automation for the company.

**Answer: B,C**

Explanation:

Creating workflow templates in the organization's `.github` repository allows the organization to standardize workflows and make them easily reusable across multiple repositories. This ensures consistency and simplifies maintenance.

Creating reusable actions and workflows that can be called from other workflows helps modularize and standardize automation tasks. These reusable components can be maintained centrally and called from different workflows across repositories.

### NEW QUESTION # 79

Which of the following scenarios requires a developer to explicitly use the `GITHUB_TOKEN` or `github.token` secret within a workflow? (Choose two.)

- A. assigning non-default permissions to the `GITHUB_TOKEN`
- B. checking out source code with the `actions/checkout@v3` action
- C. making an authenticated GitHub API request
- D. passing the `GITHUB_TOKEN` secret to an action that requires a token as an input

**Answer: C,D**

Explanation:

[A] Some actions may require a `GITHUB_TOKEN` as an input to authenticate and perform specific tasks, such as creating issues, commenting on pull requests, or interacting with the GitHub API. In such cases, you would need to explicitly pass the token to the action.

[B] When making an authenticated GitHub API request, the `GITHUB_TOKEN` is required to authenticate the request. This token is automatically provided by GitHub in the workflow, and it must be explicitly used when interacting with the GitHub API.

Note: You can use the `GITHUB_TOKEN` to make authenticated API calls. This example workflow creates an issue using the GitHub REST API:
