Free CPC-CDE-RECERT Practice Exams, CPC-CDE-RECERT Reliable Exam Tutorial

As promising learners in this area, every exam candidates need to prove self-ability to working environment to get higher chance and opportunities for self-fulfillment. Our CPC-CDE-RECERT practice materials with excellent quality and attractive prices are your ideal choices which can represent all commodities in this field as exemplary roles. Even the fierce competition cannot stop demanding needs from exam candidates. To get more specific information about our CPC-CDE-RECERT practice materials, we are here to satisfy your wish with following details.

CyberArk CDE-CPC Recertification Sample Questions (Q45-Q50):

NEW QUESTION # 45

What is determined by the MaxConcurrentConnections setting within a platform?

- A. Maximum number of concurrent connections allowed for a specific account on the platform through the PSM
- B. Maximum number of concurrent connections to the Vault allowed for sending audit activities relating to the platform
- C. Maximum number of concurrent connections that can be between the PSM and the remote machines for the platform
- **D. Maximum number of concurrent connections that can be opened between the CPM and the remote machines for the platform**

Answer: D

Explanation:

CyberArk defines MaxConcurrentConnections as: "The maximum number of connections that can be opened between the Central Policy Manager and the remote machine where the passwords are replaced." That is exactly option A.

NEW QUESTION # 46

When using Connector Management, how do you configure a DR CPM in Privilege Cloud shared services? (Choose two.)

- **A. When prompted to select the CPM mode, select Passive.**
- **B. Stop the CyberArk Password Manager service and set the startup type to Manual.**
- C. Stop the CyberArk Password Manager service and set the startup type to Automatic.
- D. When prompted for the Vault administrator credentials on the installation windows, leave it blank and proceed.

- E. When prompted for the Vault IP address on the installation windows, leave it blank and proceed.

Answer: A,B

Explanation:

CyberArk's official DR CPM procedure for Privilege Cloud (shared services) describes two key actions in this flow:

- * During installation (Connector Management): When prompted to select the CPM mode, choose Passive.
 - * After installation (configuration step): Stop the CyberArk Password Manager service and set its startup type to Manual.
- These map directly to answers C and A.

NEW QUESTION # 47

A support team has asked you to provide the previous password for an account that had its password recently changed by the CPM. In which tab within the account's overview page can you retrieve this information?

- A. Details
- **B. Versions**
- C. Activities
- D. Overview

Answer: B

Explanation:

To retrieve the previous password for an account that had its password changed by the CPM, you should look under the Versions tab within the account's overview page. This tab maintains a history of password changes, including previous passwords, along with other historical data points that allow for tracking changes over time. This feature is critical for auditing and rollback purposes in environments where knowing past credentials is necessary for troubleshooting or compliance.

NEW QUESTION # 48

What is a requirement when installing the PSM on multiple Privileged Cloud Connector servers?

- A. In-domain servers cannot be used when deploying multiple PSM servers.
- B. All PSMs in the environment must be configured to use load balancing.
- **C. Each PSM must have the same path to the same recordings directory.**
- D. Additional Privilege Cloud Connector servers cannot have CPM installed.

Answer: C

Explanation:

When installing the Privileged Session Manager (PSM) on multiple servers, it is required that each PSM installation has the same path to the same recordings directory. This is necessary to ensure that session recordings are stored consistently across different PSM instances, which is important for high availability and load balancing implementations, as well as for maintaining a unified audit trail.

:

CyberArk documentation on installing multiple PSM servers

NEW QUESTION # 49

Which prerequisites are required for installing PSM for SSH (Unix Connector)? (Choose two.)

- **A. Create the PSM for SSH parameters file on the Unix server with InstallCyberArkSSHD = Integrated.**
- B. Reset the default root account password before installing the PSM for SSH.
- C. Create an administrative user on the Unix server for future maintenance tasks.
- **D. Verify that outbound traffic from the Unix server is always routed through the same public-facing IP.**
- E. Configure the root user to not authenticate to the Unix server remotely through SSH using a password.

Answer: A,D

Explanation:

CyberArk's "Before you install PSM for SSH (Standard)" prerequisites include:

* Verify public access: "Verify that outbound traffic from the PSM for SSH server is always routed through the same public-facing IP." This directly supports C.

* Create the PSM for SSH parameters file: The parameters file is required for the installation process, and the documentation specifies InstallCyberArkSSHD = Integrated as a mandatory parameter value. This supports A (with the corrected value "Integrated").

Why the other options are not "installation prerequisites" as written:

* B: CyberArk documents that after installation, the root user will not be able to authenticate remotely using a password (security behavior), not as a prerequisite step to perform before installation.

* D: The docs mention you can use a different administrative/maintenance user, but it is not listed as a required prerequisite in the "Before you install" checklist.

* E: Resetting the root password is not listed as a prerequisite in the Privilege Cloud "Before you install PSM for SSH (Standard)" documentation.

NEW QUESTION # 50
