CompTIA A+ Certification Exam: Core 2 Sample Questions (Q20-Q25):

NEW QUESTION # 20

A technician completes the installation of an OS that appears to be successful. However, when the technician removes the USB drive that was used for the installation and restarts the system, the error "No boot device found" appears. Which of the following should the technician do next to resolve the issue?

- A. Enable UEFI devices in the BIOS
- B. Reinstall the OS from a new ISO
- C. Reseat the SATA cable
- D. Install storage drivers for the motherboard
- E. Restart in recovery mode and troubleshoot

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

If the system fails to boot after removing the USB installation media, it often means the BIOS is not pointing to the correct boot

device. This typically involves an issue with the BIOS settings-such as UEFI being disabled when the OS was installed in UEFI mode.

From All-in-One Exam Guide by Travis Everett:

"One of the most common post-installation issues is failing to configure the boot mode correctly in BIOS. If an OS is installed in UEFI mode, the UEFI boot must be enabled, otherwise the system won't detect the bootloader."

NEW QUESTION # 21

A user reports the icons on their desktop have changed. A technician investigates and discovers programs no longer open, files are inaccessible, and file extensions have been changed. When a ransom note appears on the display, which of the following should the technician do next?

- A. Restore from a backup.
- **B. Isolate the system.**
- C. Change the extensions back.
- D. Run antivirus scans.

Answer: B

Explanation:

The technician should isolate the system immediately to prevent the ransomware from spreading to other machines or network resources before taking any recovery actions.

NEW QUESTION # 22

A user's computer is running slowly. Web pages take several seconds to open, and applications are slow to respond. A technician opens the Windows Task Manager and sees the following:

Disk: 2%

Network: 12%

GPU: 15%

CPU: 70%

Memory: 97%

Which of the following would a technician most likely do to resolve the issue?

- **A. Close unnecessary programs**
- B. Upgrade the network connection
- C. Delete temporary files
- D. Clear browser cached data

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

High memory usage (97%) suggests the system is overloaded with active processes. The technician should close unneeded applications to free up RAM and improve performance.

From Mike Meyers' Lab Manual:

"When memory usage is near capacity, close all non-essential programs. This can dramatically improve response time without needing hardware upgrades."

NEW QUESTION # 23

A technician is setting up a Windows server to allow remote desktop connections for multiple users. Which of the following should the technician configure on the workstation?

- A. Ease of Access
- **B. Firewall**
- C. User Accounts
- D. Computer Management

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To allow Remote Desktop Protocol (RDP) access, the firewall must be configured to allow inbound connections on TCP port 3389.

If the Windows Firewall blocks RDP, users will not be able to connect remotely even if the feature is enabled in system settings.

B: Computer Management allows configuration of services and local users, but not network access.

C: User Accounts is for account setup and control, but enabling remote access requires firewall configuration.

D: Ease of Access is unrelated to remote connectivity-it's for accessibility features.

Reference:

CompTIA A+ 220-1102 Objective 2.2: Compare and contrast security measures and firewall settings.

Study Guide Section: Enabling and securing RDP via firewall settings

NEW QUESTION # 24

A customer is unable to open some files on their system. Each time the customer attempts to open a file, the customer receives a message that the file is encrypted. Which of the following best describes this issue?

- A. Cryptominer
- B. Keylogger
- C. Ransomware
- D. Phishing

Answer: C

Explanation:

Ransomware is malware that encrypts a user's files and then demands payment (a ransom) in exchange for the decryption key. The user's inability to open the files and the message indicating they're encrypted are classic signs of a ransomware attack.

NEW QUESTION # 25

.....
