Valid New Talend-Core-Developer Exam Vce by ITPassLeader

When you have a lot of eletronic devices, you definitly will figure out the way to study and prepare your Talend-Core-Developer exam with them. It is so cool even to think about it. As we all know that the electronic equipment provides the convenience out of your imagination.With our APP online version of our Talend-Core-Developer practice materials, your attempt will come true. Our Talend-Core-Developer exam dumps can be quickly downloaded to the eletronic devices.

Talend Core Certified Developer Exam Sample Questions (Q44-Q49):

NEW QUESTION # 44
How many sample dataset records and rows can be displayed in Talend Cloud Data Preparation?

- A. 1,000
- B. 10,000
- C. All the available records
- D. 5,000

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

In Talend Cloud Data Preparation, the platform is designed to handle large datasets efficiently by displaying a sample of the data to the user. By default, Talend Cloud Data Preparation can display up to 10,000 records from a dataset. This sampling approach ensures that users can interact with and analyze their data without performance issues that might arise from loading an entire large dataset into memory. Users have the option to view the first 10,000 records (Head sample) or 10,000 randomly selected records (Random sample) to get a representative understanding of the dataset's content.

NEW QUESTION # 45

How can you create REST API metadata in Talend Studio? Choose 2 answers.

- A. Import it from Talend API Designer.
- B. Import it from a JSON file.
- C. Import it from Talend API Tester.
- D. Create it manually in Talend Studio.

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation:

In Talend Studio, REST API metadata can be created using the following methods:

* Create it manually in Talend Studio (Option A):

* Users can define REST API metadata within Talend Studio by manually specifying API structure, endpoints, HTTP methods, and parameters.

* This method provides full control over the API metadata but requires manual configuration.

* Import it from Talend API Designer (Option B):

* If an API has been designed using Talend API Designer, it can be imported into Talend Studio.

* This enables reusing the API design directly without manual recreation.

Why not other options?

* Option C (Import from JSON file): Talend Studio does not support direct import of REST API metadata from generic JSON files.

* Option D (Import from Talend API Tester): Talend API Tester is used for testing APIs but does not provide an option to import API definitions into Talend Studio.

NEW QUESTION # 46

Where can you specify the remote JobServer to execute a Job?

- A. Target Exec tab in the Run view
- B. Run/Debug section in the Preference window
- C. Extra tab in the Job view
- D. Job settings section of the Project Settings windows

Answer: A

Explanation:

To specify the remote JobServer to execute a job, you need to use the Target Exec tab in the Run view of Talend Studio. The Run view allows you to configure and execute your job from Talend Studio. The Target Exec tab allows you to select whether you want to run your job locally or remotely on a JobServer. A JobServer is a server application that allows you to execute jobs remotely from Talend Studio or Talend Administration Center. To run your job on a remote JobServer, you need to select Remote Jobserver option from the drop-down menu and select or add a JobServer connection from the list.

You do not need to use Job settings section of Project Settings window, Extra tab in Job view, or Run/Debug section in Preferences window. These windows are not used to specify remote JobServer execution. The Job settings section of Project Settings window is used to configure general settings for your jobs, such as versioning, statistics, logs, etc. The Extra tab in Job view is used to configure extra features for your job, such as implicit context load, tStatCatcher, tLogCatcher, etc. The Run/Debug section in Preferences window is used to configure run/debug settings for your Talend Studio, such as JVM arguments, execution mode, etc. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Run view - 7.3],

[Project Settings - 7.3], [Job view - 7.3], [Preferences - 7.3]

NEW QUESTION # 47

You are building a Job to run outsode Talend Studio that must run on both Linux and Windows.
Which action should you take when building the Job?

- A. Configure the Job properties building the Job.
- B. Build one package for each platform.
- C. Specify All for the Shell launcher option in the Build Job windows.
- D. Select Build Job because Jobs are runnable on all platforms

Answer: C

Explanation:
To build a job to run outside Talend Studio that must run on both Linux and Windows, you need to select Build Job because jobs are runnable on all platforms. The Build Job option allows you to export your job as an executable file that can be run independently from Talend Studio on any platform that supports Java. You can access this option by right-clicking on your job in the Repository tree view and selecting Build Job. This will open a dialog box where you can configure the build settings, such as destination folder, archive name, context, etc.
You do not need to specify All for the Shell launcher option in the Build Job window, configure the job properties before building the job, or build one package for each platform. These methods are not necessary or available in Talend Studio and may cause errors or unexpected results. References: Talend Open Studio:
Open-source ETL and Free Data Integration | Talend, [Build Job - 7.3]

NEW QUESTION # 48

Which type of task can be added to a plan in Talend Management Console?

- A. Big Data tasks
- B. Routes
- C. Data services
- D. Jobs

Answer: D

Explanation:
Comprehensive and Detailed Explanation:
In Talend Management Console (TMC), aplanis a sequence of tasks executed in a defined order. The types of tasks that can be added to a plan include:
* Jobs (Option D):Standard data integration tasks designed in Talend Studio.
* Big Data tasks (Option B):Tasks involving big data processing.
* Routes (Option C):Tasks related to messaging routes.
However,Data services (Option A)refer to web services and are not typically added as tasks within a plan.
