Choosing to participate in Adobe certification AD0-E725 exam is a wise choice, because if you have a Adobe AD0-E725 authentication certificate, your salary and job position will be improved quickly and then your living standard will provide at the same time. But passing Adobe certification AD0-E725 exam is not very easy, it need to spend a lot of time and energy to master relevant

IT professional knowledge. DumpsQuestion is a professional IT training website to make the training scheme for Adobe Certification AD0-E725 Exam. At first you can free download part of exercises questions and answers about Adobe certification AD0-E725 exam on www.DumpsQuestion.com as a try, so that you can check the reliability of our product. Generally, if you have tried DumpsQuestion's products, you'll very confident of our products.

Adobe Commerce Developer Expert Sample Questions (Q49-Q54):

NEW QUESTION # 49

A customer asks for a new functionality which will allow them to see the total lifetime sales statistic of a product. This new data is to be made available for the API and traditional product exports. The technical architect of the company servicing the client decides that for this to be achieved, the first step is for an Extension Attribute to be created.

What are the next two steps that need to be taken? (Choose two.)

- A. Implement an around plugin on the Product Repository.
- B. Declare the extension attribute in `etc/extension_attributes.xml`.
- C. Implement an after plugin on the Product Repository.
- D. Declare the extension attribute in `etc/webapi_rest/extension_attributes.xml`.

Answer: B,C

Explanation:

To expose a new field via an Extension Attribute:

C # Declare the extension attribute in `etc/extension_attributes.xml`.

D # Implement an after plugin on the Product Repository to populate the new attribute with custom logic (in this case, lifetime sales).

A is incorrect: `etc/webapi_rest/extension_attributes.xml` does not exist (only `extension_attributes.xml` is valid).

B is incorrect: around plugins are discouraged here and unnecessarily complicate service contract extensions.

Reference:

Adobe Commerce DevDocs - Extension attributes

NEW QUESTION # 50

A Developer needs to subscribe to the `customer_register_success` event.

How should the observer be declared in the module?

- A. Declare in `etc/events.xml`:

```
<observer name="customer_register_success">
<event name="vendor_module_customer_register_observer" instance="
Vendor\Module\Observer\CustomerRegisterSuccess" />
</observer>
```
- B. Declare in `etc/observer.xml`:

```
<observer name="vendor_module_customer_register_observer">
<event name="customer_register_success" instance="
Vendor\Module\Observer\CustomerRegisterSuccess" />
</observer>
```
- C. Declare in `etc/events.xml`:

```
<event name="customer_register_success">
<observer name="vendor_module_customer_register_observer" instance="
Vendor\Module\Observer\CustomerRegisterSuccess" />
</event>
```

Answer: C

NEW QUESTION # 51

An Adobe Commerce Developer creates a module that adds a product attribute via a data patch.

Adhering to best practices, how should the Developer remove this product attribute when the module is uninstalled?

- A. Delete the custom attribute directly from the database.
- B. Make the patch implement `Magento\Framework\Setup\Patch\PatchRevertableInterface` with the `revert()` method in it.
- C. Create a new CLI command that needs to be executed before the `bin/magento module:uninstall Vendor_ModuleName`.

Answer: B

Explanation:

The recommended best practice is to use the PatchRevertableInterface when creating data patches. This interface defines a revert() method, which is executed during module uninstall, ensuring that added entities (such as product attributes) are properly removed. B (deleting from database directly) is strongly discouraged and violates upgrade safety.

C (creating a CLI command) is unnecessary; uninstallation should be handled within the patch itself.

Reference:

Adobe Commerce DevDocs - Data patches and PatchRevertableInterface

NEW QUESTION # 52

A Developer is working on an Adobe Commerce Cloud project and needs to upgrade a Redis service on production to the latest version for improved performance and security.

Which step should the Developer follow to upgrade the installed service version in Adobe Commerce Cloud?

- A. Use the magento-cloud service:update command.
- **B. Edit the services.yaml file to specify the new service version.**
- C. Submit a ticket to Adobe support.

Answer: B

Explanation:

Service versions (Redis, MySQL, Elasticsearch, RabbitMQ, etc.) are defined in the services.yaml file in Adobe Commerce Cloud. To upgrade a service version, the developer updates the version number in services.yaml and redeploys.

A (support ticket) is not required unless there is a provisioning problem.

C (magento-cloud service:update) is not a valid CLI command.

B is correct: update services.yaml and redeploy.

Reference:

Adobe Commerce Cloud DevDocs - services.yaml

NEW QUESTION # 53

A Developer connects to a Magento-Cloud CLI and creates a new branch for environment using the following Git command: git checkout -b <branch-name> The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.

Which solution will fix this issue?

- A. git branch -b <branch-name> should be used instead of Git checkout.
- **B. magento-cloud environment:branch <branch-name> should be used instead of Git commands.**
- C. magento-cloud environment:redploy --no-wait should be executed after branch creation.

Answer: B

NEW QUESTION # 54

.....

As the captioned description said, our AD0-E725 practice materials are filled with the newest points of knowledge about the exam. With many years of experience in this line, we not only compile real test content into our AD0-E725 learning quiz, but the newest in to them. And our professionals always keep a close eye on the new changes of the subject and keep updating the AD0-E725 study questions to the most accurate.
