

# 2026 1z1-076 Free Pdf Guide - Trustable Oracle Reliable 1z1-076 Exam Vce: Oracle Database 19c: Data Guard Administration

DOWNLOAD the newest Itcertking 1z1-076 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1hU0aUBhQBMXUABXTRGoWzdISOm5x15Yc>

Without practice, you cannot crack the 1z1-076 exam. Itcertking facilitates you in this purpose with its desktop Oracle 1z1-076 practice exam software. It helps you get practical experience with the final 1z1-076 Exam. By practicing under real Oracle Database 19c: Data Guard Administration (1z1-076) exam situations again and again, you develop confidence and skills to attempt the 1z1-076 exam within its allocated time.

## Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 2	<ul style="list-style-type: none"> <li>Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.</li> </ul>

Topic 9	<ul style="list-style-type: none"> <li>Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.</li> </ul>
Topic 10	<ul style="list-style-type: none"> <li>Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.</li> </ul>
Topic 11	<ul style="list-style-type: none"> <li>Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.</li> </ul>
Topic 12	<ul style="list-style-type: none"> <li>Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.</li> </ul>
Topic 13	<ul style="list-style-type: none"> <li>Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.</li> </ul>

## Reliable 1z1-076 Exam Vce, 1z1-076 Practice Questions

Many students did not perform well before they use Oracle Database 19c: Data Guard Administration actual test. They did not like to study, and they disliked the feeling of being watched by the teacher. They even felt a headache when they read a book. There are also some students who studied hard, but their performance was always poor. Basically, these students have problems in their learning methods. 1z1-076 prep torrent provides students with a new set of learning modes which free them from the rigid learning methods. You can be absolutely assured about the high quality of our products, because the content of Oracle Database 19c: Data Guard Administration actual test has not only been recognized by hundreds of industry experts, but also provides you with high-quality after-sales service.

## Oracle Database 19c: Data Guard Administration Sample Questions (Q45-Q50):

### NEW QUESTION # 45

You created a physical standby database prodsbyi from the primary database prod using SQL and RMAN. Which THREE are prerequisites for creating a Data Guard Broker configuration to manage these databases?

- A. The LOG\_ARCHIVE\_DEST\_n parameters with the service attribute set must be cleared.
- B. The primary database must have FORCE LOGGING enabled.
- C. The standby database must have supplemental logging enabled.
- D. A local net service name to enable connectivity to the PRODSBYI database instance must be defined on the primary database host.
- E. The DG\_BROKER\_START parameter must be set to TRUE for both database instances.
- F. The primary database must have supplemental logging enabled.

**Answer: D,E,F**

Explanation:

When setting up a Data Guard Broker configuration for a primary database and its physical standby, the following prerequisites must be met:

A: Oracle Net connectivity must be defined on both the primary and standby hosts to enable the respective database instances to communicate with each other.

B: Supplemental logging is required on the primary database because it provides additional logging necessary for the standby database to be able to apply changes from the primary database accurately.

F: The DG\_BROKER\_START parameter must be set to TRUE for both the primary and standby database instances. This parameter is used to start the Data Guard Broker process which manages the configuration.

Options C and D are not prerequisites for creating a Data Guard Broker configuration. Additionally, while FORCE LOGGING mode (option E) is recommended as a best practice to prevent possible data inconsistencies during media recovery, it is not a strict prerequisite for creating a Data Guard Broker configuration.

#### NEW QUESTION # 46

Your Data Guard environment has one physical standby database using Real-Time Query. Two sequences have been created by these SQL statements:

Neither sequence has been used since being created.

Session 1 connects to the primary database instance and issues these two SQL statements:

```
SELECT a.nextval FROM DUAL; SELECT b.nextval FROM DUAL;
```

Then session 2 connects to the physical standby database instance and issues the same SQL statements. Which output will be seen for session 2?

Then session 2 connects to the physical standby database instance and issues the same SQL statements. Which output will be seen for session 2?

A)

B)

C)

D)

- A. Option A
- B. Option B
- C. Option C
- D. Option D

**Answer: C**

Explanation:

In Oracle, a sequence created with the GLOBAL keyword is available and can produce values across all sessions and instances. However, a sequence created with the SESSION keyword is only specific to the session it was created in. When the NEXTVAL is called for a sequence, it will increment according to the sequence's properties set during its creation.

Given the sequence creation statements and the actions performed:

The a sequence is global, which means it is available across the entire database, including the standby database with Real-Time Query enabled. So, when session 2 calls a.nextval, it will get the next value in the sequence, which is 21 since session 1 already retrieved 1.

The b sequence is session-specific, so when session 2 calls b.nextval, it will get the value 1 because for this new session on the standby, this is the first time the sequence is being accessed.

Therefore, the output for session 2 will be a output as 21 and b output as 1, which corresponds to Option C.

#### NEW QUESTION # 47

Which two are prerequisites for configuring Transaction Guard in a Data Guard environment?

- A. Ensure that connection descriptors for database clients use the failover clause with the COMMIT\_OUTCOME parameter set to TRUE.
- B. Create a database service with COMMIT\_OUTCOME set to TRUE and ensure that the service is statically registered with the default listener on the primary host.
- C. Create a database service with COMMIT\_OUTCOME set to TRUE, and ensure clients use that service to connect to the database instance.
- D. Grant execute permission on the DBMS\_APP\_CONT package to relevant database schema owners.
- E. Set INSTANCE\_NAME identically on all the Data Guard Configuration databases and modify the local service name on the client to include a CONNECTION\_LIST containing all the standby hosts.

**Answer: C,D**

#### NEW QUESTION # 48

Which TWO statements are true about Far Sync instances?

- A. They work in Maximum Availability mode.
- B. They work in Maximum Performance mode.
- C. They work in Maximum Protection mode.
- D. They do not work with Snapshot Standby databases.
- E. They do not work with Logical Standby databases.

**Answer: B,E**

#### NEW QUESTION # 49

Which THREE are true about using flashback database in a Data Guard environment?

- **A. It may be used to flash back a physical standby that receives redo from a far sync instance.**
- B. When a flashback database operation is performed on a primary database, a physical standby database is also flashed back automatically.
- **C. It may not be used to flash back a primary database after a failover to a physical standby.**
- **D. You can use it when real-time apply is enabled in case the physical standby suffers from logical corruption.**
- E. You can use it when real-time apply is enabled in case the phyIt may not be used to flash back a primary database after a failover to a logical standby.
- F. When a flashback database operation is performed on a primary database, a logical standby database is also flashed back automatically.

**Answer: A,C,D**

Explanation:

Flashback Database is a feature that allows reverting a database to a previous point in time, which is extremely useful in various Data Guard configurations:

\* It may be used to flash back a physical standby that receives redo from a far sync instance (C):

Flashback Database can be used on a physical standby database to revert it to a past point in time, even when it is receiving redo data from a far sync instance. This can be particularly useful to recover from logical corruptions or unwanted changes.

\* You can use it when real-time apply is enabled in case the physical standby suffers from logical corruption (D): Even when real-time apply is enabled, which allows redo data to be applied to the standby database as soon as it is received, Flashback Database can be used to revert the physical standby database to a point in time before the logical corruption occurred.

\* It may not be used to flash back a primary database after a failover to a physical standby (E):

After a failover has occurred from a primary to a physical standby database, making the standby the new primary, Flashback Database cannot be used to revert the old primary database to a state before the failover because the failover operation makes irreversible changes to the database role and configuration. #### NEW QUESTION # 50

.....

As the quick development of the world economy and intense competition in the international, the world labor market presents many new trends: company's demand for the excellent people is growing. As is known to us, the 1z1-076 certification is one mainly mark of the excellent. If you want to improve your correct rates of exam, we believe the best method is inscribed according to the fault namely this in appearing weak sports, specific aim ground consolidates knowledge is nodded. Our 1z1-076 Guide Torrent will help you establish the error sets. We believe that it must be very useful for you to take your exam, and it is necessary for you to use our 1z1-076 test questions.
