IBM watsonx Generative AI Engineer - Associate Sample Questions (Q362-Q367):

NEW QUESTION # 362

In the context of IBM Watsonx Generative AI models, hallucinations refer to outputs where the model generates text that is factually incorrect or not grounded in the provided input or training data. Understanding the underlying causes of hallucinations is critical for maintaining the reliability of the model.

Which of the following best describes a primary cause of hallucinations in generative models?

- A. The model's use of a greedy decoding strategy without beam search.
- B. The model's over-reliance on token repetition to form coherent sentences.
- C. The model's training on incomplete or unstructured datasets leading to incorrect generalizations.
- D. The model's incapacity to follow the temperature parameter settings.

Answer: C

NEW QUESTION # 363

You are deploying a large language model in a financial advisory platform to assist users in making investment decisions. Which of the following represent significant risks that should be mitigated before full deployment? (Select two)

- A. The model offers speculative advice without indicating the associated level of uncertainty, which may mislead inexperienced investors.
- B. The model provides longer-than-expected responses, potentially causing user frustration and increasing abandonment rates on the platform.
- C. The model is trained on open-source financial data, which results in slower response times during inference.
- D. The model generates recommendations that align with historical financial trends but fail to account for recent economic disruptions.
- E. The model occasionally generates offensive or inappropriate content when responding to user queries.

Answer: A,D

NEW QUESTION # 364

In a system that generates product recommendations using a generative AI model, you are tasked with creating prompts that incorporate dynamic variables to ensure more relevant and personalized responses.

Prompt Template: "Recommend products for [customer_name] based on their interest in [product_category]." Which portion of the prompt is the best candidate to be replaced with variables to achieve greater personalization and flexibility? (Select two)

- A. "[customer_name]"
- B. "[product_category]"
- C. "for"
- D. "Recommend products"
- E. "based on their interest"

Answer: A,B

NEW QUESTION # 365

You are tasked with integrating watsonx.ai into a legacy system that operates over HTTP and requires strict security and monitoring of the API calls. The legacy system lacks modern authentication mechanisms like OAuth.

Which integration method would best suit the needs of this environment while ensuring security and efficient API management?

- A. Use a REST API with OAuth authentication and token management to secure the communication.
- B. Use REST API with API key-based authentication, leveraging HTTPS for encrypted communication between the legacy system and watsonx.ai.
- C. Directly embed the watsonx.ai SDK into the legacy system to handle API management and security, eliminating the need for external API calls.
- D. Implement a GraphQL API to allow the legacy system to query specific fields and reduce payload size, thereby improving efficiency.

Answer: B

NEW QUESTION # 366

You are tasked with fine-tuning a large language model (LLM) on a specific industry dataset using the IBM watsonx user interface. Due to the lack of labeled data, your team decides to generate synthetic data to supplement the training set. The objective is to

ensure the fine-tuned model can generalize effectively to real-world scenarios in this industry. You need to configure synthetic data generation and perform the fine-tuning.

Which of the following actions should you take to ensure the synthetic data is suitable for fine-tuning the model and does not lead to overfitting or model bias? (Select two)

- A. Ensure that the synthetic data covers edge cases as well as common industry scenarios.
- B. Configure the synthetic data to exclude rare or uncommon events, as these are not representative of the overall dataset.
- C. Rely solely on synthetic data for fine-tuning, as it is fully representative of the industry domain.
- D. Use the IBM watsonx Data Refinery tool to inspect and balance the synthetic data before fine-tuning.
- E. Generate only a small amount of synthetic data to minimize computational costs and training time.

Answer: A,D
