Prep4away has made this study material after consulting with the professionals and getting their positive feedback. A lot of students have used our product and prepared successfully for the test.

Salesforce Marketing Cloud Intelligence Accredited Professional Sample Questions (Q63-Q68):

NEW QUESTION # 63

An implementation engineer has been provided with 4 different source files: 03m48s

1. Twitter Ads ~
2. Creative Classification
3. Placement Classification
4. Campaign Category Classification

The main source is Twitter Ads (which includes various fields and KPIs), and the rest are classification files that connect to Twitter Ads and enrich different fields within it.

The connections between the files are described as follows:

1st Party Creative Classification

File structure/headers:

Creative ID	1st Party Creative Image	1st Party Creative Group
-------------	--------------------------	--------------------------

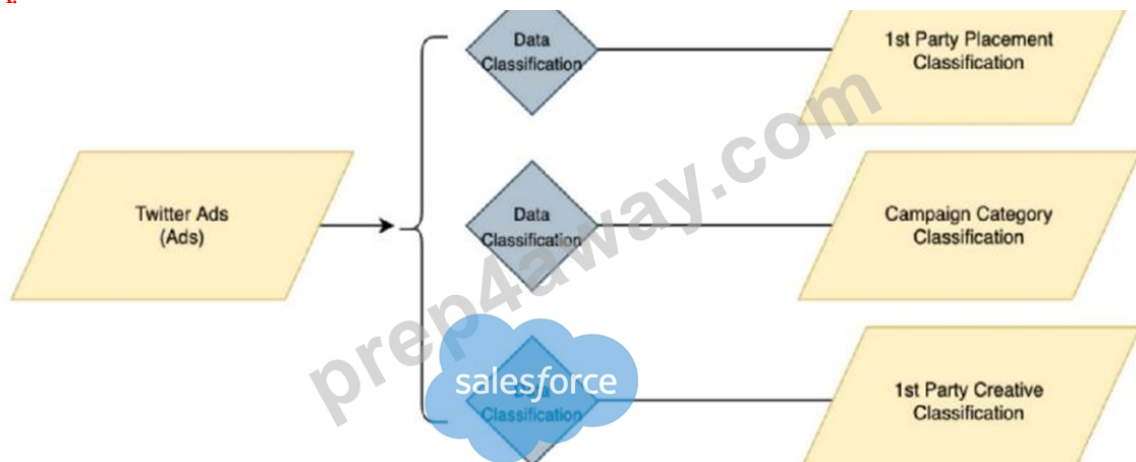

Creative ID - links back to Creative Key (Twitter Ads)

1st Party Placement Classification by

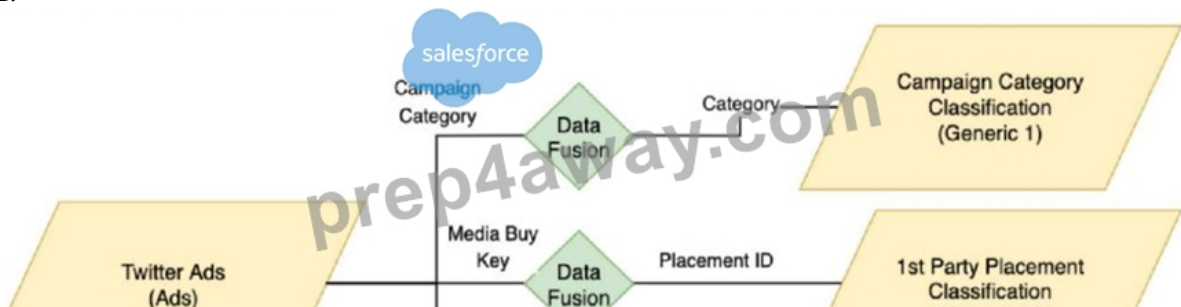

File structure/headers:

Placement ID	1st Party Placement Group
--------------	---------------------------

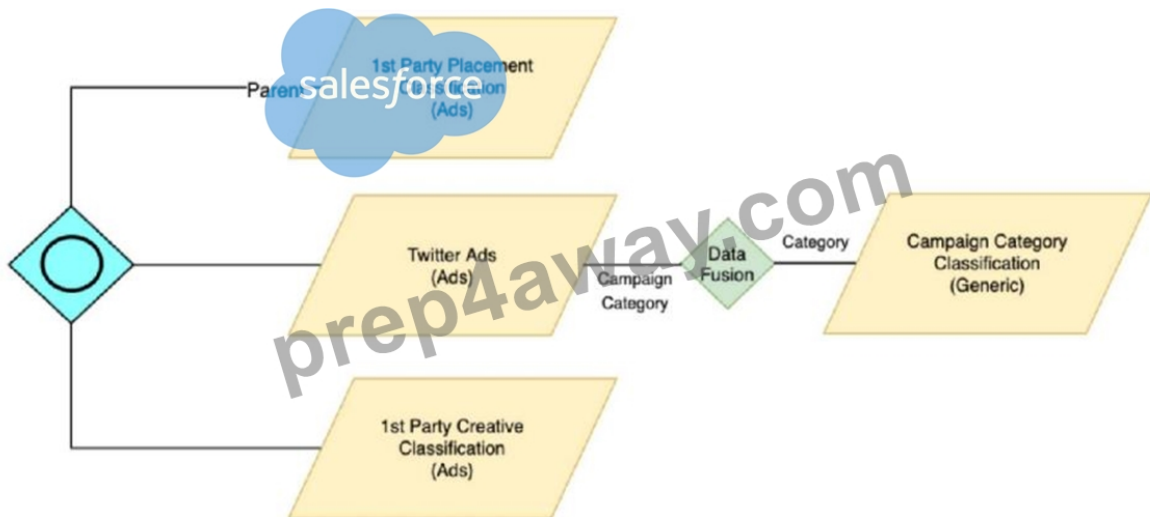

- A.

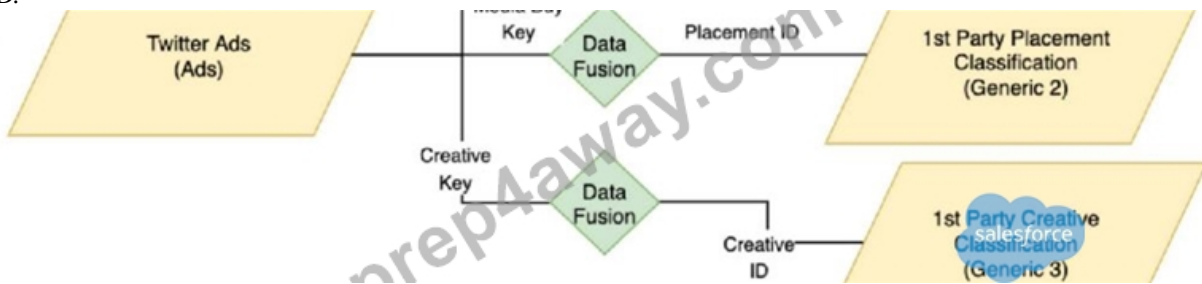

- B.

- C.

• D.

Answer: A

Explanation:

In Salesforce Marketing Cloud Intelligence, connections between source files and classification files are established through common keys that link data records. For this scenario:

The "1st Party Creative Classification" file has a "Creative ID" field which corresponds to the "Creative Key" in the "Twitter Ads" data. This link enables enrichment of Twitter Ads data with creative classification details.

The "1st Party Placement Classification" file will contain a "Placement ID" that connects to a corresponding field in the "Twitter Ads" data, enabling the enrichment of placement classification details.

Option A appears to accurately depict this setup where data streams for "Creative Classification" and "Placement Classification" are connected to the "Twitter Ads" data stream using the "Creative ID" and "Placement ID", respectively. This structure allows for the enhancement of the main Twitter Ads data with additional classification information.

NEW QUESTION # 64

A client's data consists of three data streams as follows:

Data Stream A:

Day	Media Buy Key	Campaign Key	Site Key	Site Name	Revenue
01-Apr-20	MBK_1	CX_1	SK_C_1	SN_C_1	\$ 4
01-Apr-20	MBK_2	CX_2	SK_C_2	SN_C_2	\$ 5
01-Apr-20	MBK_5	CX_5	SK_C_2	SN_C_2	\$ 7

Data Stream B:

Day	Campaign Key	Campaign Name	Creative Key	Clicks	Media Cost
01-Apr-20	CX_1	CN_B_1	CRK_B_1	10	\$ 2
01-Apr-20	CX_2	CN_B_2	CRK_B_2	20	\$ 3

Data Stream C:

Day	Media Buy Key	Campaign Key	Site Key	Site Name	Revenue
01-Apr-20	MBK_1	CX_1	SK_C_1	SN_C_1	\$ 4
01-Apr-20	MBK_2	CX_2	SK_C_2	SN_C_2	\$ 5
01-Apr-20	MBK_5	CX_5	SK_C_2	SN_C_2	\$ 7

* The data streams should be linked together through a parent-child relationship.

* Out of the three data streams, Data Stream C is considered the source of truth for both the dimensions and measurements.

How should the "Override Media Buy Hierarchies" checkbox be set in order to meet the client's requirements?

- A. It should be checked in Data Stream B
- B. It should be checked in Data Stream A
- C. It should not be checked in any of the three Data Streams.
- **D. It should be checked in Data Stream C**

Answer: D

Explanation:

If Data Stream C is the source of truth, the "Override Media Buy Hierarchies" checkbox should be checked for Data Stream C. This means that the hierarchy defined within Data Stream C will take precedence over any other media buy hierarchies present in Data Streams A or B. By doing so, it enforces that the hierarchy from the source of truth (Data Stream C) is used throughout the dataset, maintaining the integrity of the hierarchical relationships as defined by the most reliable data source.

NEW QUESTION # 65

The following file was uploaded into Marketing Cloud Intelligence as a generic dataset type:

Day	web_site_key	web_site_name	web_site_source	Page Views
01/01/2021	site_key1	site_name1	fbmsg / tp_email	100
01/01/2021	site_key1	site_name1	referral	200
01/01/2021	site_key2	site_name2	twitter	300
01/01/2021	site_key3	site_name3	fb_inst	400

The mapping is as follows:

Day - Day

Web_site_source - Main Generic Entity Attribute 01

Page Views - Generic Metric 1

*Note that 'web_site_key' and 'web_site_name' are NOT mapped.

How many rows will be stored in Marketing Cloud Intelligence after the above file is ingested?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

In Marketing Cloud Intelligence, when a file is uploaded as a generic dataset type and mapped accordingly, each unique combination of the mapped fields results in a separate row in the database. The file in question has been mapped with 'Day' to 'Day', 'Web_site_source' to 'Main Generic Entity Attribute 01', and 'Page Views' to 'Generic Metric 1'. The 'web_site_key' and 'web_site_name' are not mapped and thus, won't affect the row count.

Since there are 4 unique combinations of the mapped fields in the uploaded file (each day and source combination is unique), Marketing Cloud Intelligence will store 4 rows after ingestion, corresponding to each unique combination of 'Day' and 'Web_site_source'.

NEW QUESTION # 66

The following file was uploaded into Marketing Cloud Intelligence as a Generic Data Stream type:

Day	web_site_key	web_site_name	web_site_source	Page Views
01/01/2021	site_key1	site_name1	fbmsg / tp_email	100
01/01/2021	site_key1	site_name1	referral	200
01/01/2021	site_key2	site_name2	twitter	300
01/01/2021	site_key3	site_name3	fb_inst	400

The mapping is as follows:

Day - Day

web_site_key -> Main Generic Entity Key

web_site_name -> Main Generic Entity Name

Web_site_source -> Main Generic Entity Attribute 01

Page Views - Generic Metric 1

How many rows will be stored in Marketing Cloud Intelligence after the above file is ingested?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

With the uploaded file mapped as a Generic Data Stream type, the unique identifier for a row is the combination of 'Day', 'web_site_key', 'web_site_name', and 'Web_site_source'. As 'Day' is mapped to 'Day', 'web_site_key' to 'Main Generic Entity Key', 'web_site_name' to 'Main Generic Entity Name', and 'Web_site_source' to 'Main Generic Entity Attribute 01', each unique combination of these fields will constitute a separate row.

The provided file has 4 unique combinations of 'Day', 'web_site_key', 'web_site_name', and 'Web_site_source', as each line has a unique 'web_site_key' and 'web_site_name'. Consequently, Marketing Cloud Intelligence will store 4 rows, one for each unique combination.

NEW QUESTION # 67

What is the relationship between "Media Buy Key" and "Campaign Key"?

- A. Many-to-one (one Campaign Key has many Media Buy Keys)
- B. One-to-many (one Media Buy Key has many Campaign Keys)
- C. One-to-one
- D. Many-to-many

Answer: A

Explanation:

Typically, 'Campaign Key' is a unique identifier for a specific marketing campaign, while 'Media Buy Key' refers to the purchases of advertising space associated with that campaign. A campaign can have multiple media buys, so the relationship is many-to-one, with many media buys (Media Buy Keys) associated with a single campaign (Campaign Key).

NEW QUESTION # 68

.....

With the high pass rate as 98% to 100%, we are confident to claim that our high quality and high efficiency of our AP-215 exam guide is unparalleled in the market. We provide the latest and exact AP-215 practice quiz to our customers and you will be grateful if you choose our AP-215 Study Materials and gain what you are expecting in the shortest time. Besides, you have the chance to experience the real exam in advance with the Software version of our AP-215 practice materials.
