Our system is high effective and competent. After the clients pay successfully for the Cloud-Digital-Leader study materials the system will send the products to the clients by the mails. The clients click on the links in the mails and then they can use the Cloud-Digital-Leader study materials immediately. Our system provides safe purchase procedures to the clients and we guarantee the system won't bring the virus to the clients' computers and the successful payment for our Cloud-Digital-Leader Study Materials. Our system is strictly protect the clients' privacy and sets strict interception procedures to forestall the disclosure of the clients' private important information. Our system will automatically send the updates of the Cloud-Digital-Leader study materials to the clients as soon as the updates are available. So our system is wonderful.

The Google Cloud-Digital-Leader exam covers a range of topics, including cloud computing concepts, Google Cloud Platform services, security and compliance, and networking. It is a comprehensive exam that tests an individual's knowledge and understanding of the Google Cloud Platform. Cloud-Digital-Leader Exam is designed to be challenging, but it is also a valuable learning experience that can help individuals gain a deeper understanding of cloud computing.

### New Cloud-Digital-Leader Study Plan - Trustworthy Cloud-Digital-Leader Exam Content

You must have felt the changes in the labor market. Today's businesses require us to have more skills and require us to do more in the shortest possible time. We are really burdened with too much pressure. Cloud-Digital-Leader simulating exam may give us some help. With our Cloud-Digital-Leader Study Materials, we can get the Cloud-Digital-Leader certificate in the shortest possible time. And our pass rate is high as 98% to 100% which is unbeatable in the market.

### Google Cloud Digital Leader Sample Questions (Q277-Q282):

**NEW QUESTION # 277**

Your organization is building an application running in Google Cloud. Currently, software builds, tests, and regular deployments are done manually, but you want to reduce work for the team. Your organization wants to use Google Cloud managed solutions to automate your build, testing, and deployment process.

Which Google Cloud product or feature should your organization use?

- A. Cloud Code
- **B. Cloud Build**
- C. Cloud Deployment Manager
- D. Cloud Scheduler

**Answer: B**

Explanation:

Explanation

Deploy your application to App Engine using the gcloud app deploy command. This command automatically builds a container image by using the Cloud Build service and then deploys that image to the App Engine flexible environment.

Reference: <https://cloud.google.com/appengine/docs/flexible/nodejs/testing-and-deploying-your-app>

#### NEW QUESTION # 278

An organization needs frequent access to only a subset of their data. They want to reduce costs by depositing the rest of their data across Nearline Coldline and Archive repositories. Which Google Cloud product should the organization use?

- A. Data Catalog
- B. Filestore
- **C. Cloud Storage**
- D. Cloud Spanner

**Answer: C**

Explanation:

Per Google docs, specifically for GCP Cloud Storage there exists four types of storage with one of them, standard storage, being described as "storage for data that is frequently accessed ('hot' data) and/or stored for only brief periods of time."

<https://cloud.google.com/storage>

#### NEW QUESTION # 279

After rolling out a new update, an organization found a minor bug in its online video game.

How should the organization approach this bug while following SRE principles?

- A. Accept and ignore the bug because it is only minor
- B. Document bug correction to eliminate all future bugs
- **C. Accept and learn from the bug because failure is normal**
- D. Hold a postmortem to reprimand the employee responsible for the bug

**Answer: C**

Explanation:

Explanation

<https://www.blameless.com/sre/sre-principles>

Accepting failure as normal is one of the SRE principles. SREs believe that accepting failure as normal helps to build an iterative, collaborative culture. One way this is done is by holding a blameless "lessons learned" discussion after an incident occurs.

#### NEW QUESTION # 280

A customer has contacted you about migrating to Google Cloud. The customer would like to migrate their data from on premises as soon as possible. They don't have the budget to rewrite code, and they want the most direct route. What migration option should suggest to the customer?

- A. Improve and Move
- B. None, since the customer is not cloud native ready.

- C. Lift and Shift
- D. Rip and Replace

**Answer: C**

Explanation:

Explanation

With Lift and Shift migrations, the customer could move workloads from a source environment to a target environment with few or no modifications or refactoring

### NEW QUESTION # 281

You are working in a company where you need to store Terabytes of Image Data daily and process them e.g. Taking photos of the entire planet 24 hours every day with satellite and sending data to data centres to store and process it. Which of the following would be the best combination for your infrastructure.

You are working in a company where you need to store Terabytes of Image Data daily and process them e.g. Taking photos of the entire planet 24 hours every day with satellite and sending data to data centres to store and process it. Which of the following would be the best combination for your infrastructure.

- A. Google Cloud Storage & Preemptible VMs.
- B. Bare Metal Solutions with Google Cloud Storage.
- C. None of the Above
- D. Google Cloud Storage & Google Cloud Compute Engines

**Answer: A**

Explanation:

The above is a real world example of a company named Planet, where they sent around 80+ satellites to take pictures of earth every day, 24 hours. They run around 40,000 preemptible VMs concurrently.

Preemptible instances function like normal instances but have the following limitations:

Compute Engine might stop preemptible instances at any time due to system events. The probability that Compute Engine will stop a preemptible instance for a system event is generally low, but might vary from day to day and from zone to zone depending on current conditions.

Compute Engine always stops preemptible instances after they run for 24 hours. Certain actions reset this 24-hour counter.

Preemptible instances are finite Compute Engine resources, so they might not always be available.

Preemptible instances can't live migrate to a regular VM instance, or be set to automatically restart when there is a maintenance event.

Due to the above limitations, preemptible instances are not covered by any Service Level Agreement (and, for clarity, are excluded from the Compute Engine SLA).

The Google Cloud Free Tier credits for Compute Engine do not apply to preemptible instances.
