

100% Pass Quiz HP - HPE7-A01 Reliable Dumps Files

P.S. Free 2026 HP HPE7-A01 dumps are available on Google Drive shared by SureTorrent: <https://drive.google.com/open?id=14Z590PEqXPJeIBB02agO0YMdCSI04gM7>

Our SureTorrent team always provide the best quality service in the perspective of customers. There are many reasons why we are be trusted: 24-hour online customer service, the free experienced demo for HPE7-A01 exam materials, diversity versions, one-year free update service after purchase, and the guarantee of no help full refund. If you can successfully pass the HPE7-A01 Exam with the help of our SureTorrent, we hope you can remember our common efforts.

Aruba is a leading provider of wireless networking technology, and the HPE7-A01 certification is widely recognized in the industry. Holding this certification demonstrates a professional's commitment to improving their skills, knowledge, and ability to meet the requirements of the ever-evolving wireless networking industry. Aruba solutions are used by top companies worldwide, and professionals with this certification can leverage their skills to advance their careers and become sought-after experts in their organizations.

HP HPE7-A01 Certification Exam is designed for individuals who aim to become Aruba Certified Campus Access Professionals. Aruba is a leading provider of network infrastructure solutions for businesses and organizations across the globe. The HPE7-A01 exam is intended to test the skills and knowledge of professionals who work with Aruba wireless and wired networking technologies.

HPE7-A01 Reliable Dumps Files & Useful Tips to help you pass HP HPE7-A01: Aruba Certified Campus Access Professional Exam

Many students did not perform well before they use Aruba Certified Campus Access Professional Exam actual test. They did not like to study, and they disliked the feeling of being watched by the teacher. They even felt a headache when they read a book. There

are also some students who studied hard, but their performance was always poor. Basically, these students have problems in their learning methods. HPE7-A01 prep torrent provides students with a new set of learning modes which free them from the rigid learning methods. You can be absolutely assured about the high quality of our products, because the content of Aruba Certified Campus Access Professional Exam actual test has not only been recognized by hundreds of industry experts, but also provides you with high-quality after-sales service.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q81-Q86):

NEW QUESTION # 81

What is used to retrieve data stored in a Management Information Base (MIB)?

- A. SNMPv3
- B. DSCP
- C. CDP
- D. TLV

Answer: A

Explanation:

SNMPv3.

SNMPv3 is a protocol that is used to retrieve data stored in a Management Information Base (MIB), which is a database of managed objects in a network. SNMPv3 provides security and access control features that are not available in earlier versions of SNMP. SNMPv3 can also use encryption to protect the data from unauthorized access or modification.

According to the Aruba Certified Professional - Campus Access document1, one of the skills that this certification validates is: Implement and Analyze the output from common network monitoring tools Configure Port Mirroring to collect PCAPs Configure NAE agents 9.4 Configure UXI sensors for internal and external tests Describe how API scan be used to configure, manage, monitor, and troubleshoot your network The document also mentions that the candidate should have a distinguished understanding of different protocols across vendors, which implies that they should be familiar with SNMPv3 and how it can be used to access MIB data.

NEW QUESTION # 82

Your customer has four (4) Aruba 7200 Series Gateways and two (2) 7000 Series Gateways. The customer wants to form a cluster with these Gateways. What design consideration would prevent you from using all of those Gateways?

- A. A combination of 7200 series and 7000 series gateways supports up to 4 nodes
- B. A heterogeneous cluster is not supported in AOS 10.x.
- C. Multiple versions between Gateways in the same cluster profile are not allowed AOS 10.x.
- D. The AP load should be lowest value of worst-case scenario load.

Answer: C

Explanation:

The reason is that AOS 10.x does not support clustering gateways with different versions in the same cluster profile. A cluster profile defines the configuration settings for a group of gateways that are managed by Aruba Central.

NEW QUESTION # 83

Which statements are true about VSX LAG? (Select two.)

- A. Outgoing traffic is preferentially switched to local members of the LAG.
- B. Outgoing traffic is switched to a port based on a hashing algorithm which may be either switch in the pair
- C. Up to 255 VSX lags can be configured on all 83xx and 84xx model switches.
- D. The total number of configured links may not exceed 8 for the pair or 4 per switch
- E. LAG traffic is passed over VSX ISL links only while upgrading firmware on the switch pair

Answer: A,D

Explanation:

Explanation

The correct answers are A and D.

According to the web search results, VSX LAG is a feature that allows multiple PSKs to be used on a single SSID, providing device-specific or group-specific passphrases for enhanced security and deployment flexibility for headless IoT devices¹. VSX LAGs span both aggregation switches and appear as one device to partner downstream or upstream devices or both when forming a LAG with the VSX pair².

One of the statements that is true about VSX LAG is that the total number of configured links may not exceed 8 for the pair or 4 per switch¹. This means that a VSX LAG across a downstream switch can have at most a total of eight member links, and a switch can have a maximum of four member links. When creating a VSX LAG, it is recommended to select an equal number of member links in each segment for load balancing¹.

Another statement that is true about VSX LAG is that outgoing traffic is preferentially switched to local members of the LAG². This means that when active forwarding and active gateway are enabled, north-south and south-north traffic bypasses the ISL link and uses the local ports on the switch. This optimizes the traffic path and reduces the load on the ISL link².

The other statements are false or not relevant for VSX LAG. Outgoing traffic is not switched to a port based on a hashing algorithm, which may be either switch in the pair. This is a characteristic of MLAG (Multi-Chassis Link Aggregation), which is a different feature from VSX LAG. LAG traffic is not passed over VSX ISL links only while upgrading firmware on the switch pair. This is a scenario that may occur when performing hitless upgrades, which is a feature that allows software updates without impacting network availability. The number of VSX lags that can be configured on all 83xx and 84xx model switches is not 255, but depends on the switch model and firmware version. For example, the AOS-CX 10.04 supports up to 64 VSX lags for 8320 switches and up to 128 VSX lags for 8325 and 8400 switches.

NEW QUESTION # 84

When configuring UBT on a switch what will happen when a gateway role is not specified?

- A. The gateway will send back the deny role to the client.
- B. The gateway will assign a default role to the client
- C. The switch will assign the default deny role to the client.
- **D. The switch will put the client on the access VLAN**

Answer: D

Explanation:

According to the Aruba Documentation Portal¹, user-based tunneling (UBT) is a feature that uses GRE to tunnel ingress traffic on a switch interface to a gateway for further processing. UBT enables a switch to provide a centralized security policy, using per-user authentication and access control to ensure consistent access and permissions.

Option A: The switch will put the client on the access VLAN

This is because option A shows how UBT works on an Aruba switch. When a device connects to the network, it is authenticated using either MAC Authentication or 802.1X and triggers an enforcement policy from ClearPass, which contains an enforcement profile with a user role configuration. The user role can be assigned locally on the switch or on ClearPass as part of an enforcement profile. The user role determines the VLAN that the device belongs to and the access policies that apply to it².

Therefore, option A is correct.

NEW QUESTION # 85

Your customer has asked you to assign a switch management role for a new user. The customer requires the user role to view nonsensitive switch configuration information and only has the GET method for REST API for all resources other than \login and \logout.

Which default AOS-CX user role meets these requirements?

- **A. operators**
- B. sysops
- C. sysadmin
- D. config

Answer: A

Explanation:

The operators role in Aruba AOS-CX provides read-only access to nonsensitive configuration information and allows only GET

operations via the REST API for all resources (except /login and /logout). This role is ideal for users who need monitoring and visibility without the ability to modify switch configurations.

NEW QUESTION # 86

.....

Now, do you want to enjoy all these HP HPE7-A01 Exam benefits? Looking for a simple and quick way to pass the Aruba Certified Campus Access Professional Exam (HPE7-A01) exam? If your answer is yes then you do not need to worry about it. Just visit the "SureTorrent" exam questions and download "SureTorrent" exam questions and start preparation right now.
