In addition to the comprehensive SAP C-S4CPB-2508 practice exams, our product also includes SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C-S4CPB-2508) PDF questions developed by our team to help you get prepared in a short time. Our Prepare for your SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C-S4CPB-2508) PDF format works on all smart devices without limits of time and place.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q33-Q38):

NEW QUESTION # 33

Who should be identified and assigned the role of the IT Contact immediately when the implementation begins?

- A. Customer system admin
- B. Partner project manager
- C. Customer project manager
- D. Partner lead configuration expert

Answer: A

Explanation:

The IT Contact is the person who is responsible for setting up the initial system access, provisioning users, and managing authentication for the SAP S/4HANA Cloud Public Edition project. The IT Contact should be identified and assigned immediately when the implementation begins, as they will receive all the SAP communications and notifications related to the system setup and configuration. The IT Contact should also be available and accessible throughout the project, and collaborate with the project team and the business stakeholders.

The IT Contact should be someone who is a hands-on system administrator, not an executive. They should have the skills and experience to perform the system administration tasks, such as creating users, assigning roles, configuring identity providers, and troubleshooting issues. They should also be committed and engaged with the project, and provide feedback and participate in testing and training activities.

Therefore, the correct answer is C, as the customer system admin is the most suitable person to be the IT Contact for the SAP S/4HANA Cloud Public Edition project. References = 1 How to Choose the Right IT Contact for Your SAP S/4HANA Cloud Public Edition Project - SAP Community

NEW QUESTION # 34

Which of the following systems are used to implement SAP S/4HANA Cloud Public Edition for a customer?

Note: There are 3 correct answers to this question.

- A. Trial system
- B. Development system
- C. Test system
- D. Starter system
- E. Sandbox system

Answer: C,D,E

Explanation:

* Sandbox system: This is an optional system that can be used to explore the SAP S/4HANA Cloud Public Edition capabilities and

features before the implementation project starts. It is not connected to the starter system or the test system and does not have any data migration or configuration tools. It can be refreshed on demand by the customer1.

* Starter system: This is the first system that is provisioned for the customer after the contract is signed.

It is used to perform the fit-to-standard workshops, where the customer validates the standard processes and identifies the gaps and requirements. It also serves as the configuration system, where the customer configures the business processes using the SAP Central Business Configuration tool. The starter system is connected to the test system and can transfer the configuration and master data to it2.

* Test system: This is the second system that is provisioned for the customer after the starter system is configured. It is used to perform the integration testing, user acceptance testing, data migration, and cutover activities. It also serves as the production system, where the customer runs the live business processes after the go-live. The test system is connected to the starter system and can receive the configuration and master data from it3.

The systems that are not used to implement SAP S/4HANA Cloud Public Edition for a customer are:

* Trial system: This is a system that can be used to experience the SAP S/4HANA Cloud Public Edition solution for a limited time. It is not connected to any other system and does not have any data migration or configuration tools. It is not part of the implementation project and does not require a contract4.

* Development system: This is a system that can be used to develop custom applications or extensions using the SAP Business Technology Platform. It is not part of the SAP S/4HANA Cloud Public Edition landscape and does not have any data migration or configuration tools. It requires a separate contract and license.

NEW QUESTION # 35

In which application can you see the available business context capacity remaining for extension items?

- A. Custom Reusable Elements app
- B. Extensibility Explorer app
- C. Extensibility Inventory app
- D. Extensibility Cockpit app

Answer: D

Explanation:

The Extensibility Cockpit app within SAP S/4HANA Cloud Public Edition is a central tool for managing and monitoring the extensibility aspects of the system. It provides an overview of the extension items created, including custom fields, custom business objects, and other extension elements. Importantly, it also shows the available business context capacity remaining for these extension items, which is crucial for ensuring that the system's extensibility is managed within the provided limits. This helps in planning and managing customizations effectively, ensuring that the system remains scalable and performant.

NEW QUESTION # 36

Which tasks are mandatory before you can migrate data for a specific object? Note: There are 2 correct answers to this question.

- A. All previous migration projects are in the "Finished" status
- B. You select the same migration method previously used for other objects
- C. Permission to migrate the data has been assigned
- D. Predecessor objects have been migrated

Answer: C,D

NEW QUESTION # 37

When using the Local SAP S/4HANAA Database Schema migration approach, what is the maximum file size? Note: There are 2 correct answers to this question.

- A. 100 MB per file
- B. 160 MB per file
- C. 100 MB per ZIP file
- D. 160 MB per ZIP file

Answer: A,C
