To pass the CCFA-200b exam, you must put in a lot of time studying, practicing, and working hard. You will need real CrowdStrike CCFA-200b Questions and the necessary understanding of the exam's format to pass the CCFA-200b test. Without preparing with actual CrowdStrike Certified Falcon Administrator - 2024 Version (CCFA-200b) questions, applicants find it difficult to get the knowledge essential to pass the CrowdStrike certification exam in a short time.

CrowdStrike CCFA-200b Exam Syllabus Topics:

Topic	Details
Topic 1	Workflows: This domain focuses on configuring automated workflows that execute predefined actions when specific triggers or conditions are met.
Topic 2	Group Creation: This domain covers assigning endpoints to appropriate groups for policy application and following best practices for managing host group structures.

Topic 3	• Policy Application: This domain encompasses configuring prevention policies for security posture, sensor update policies, RTR audit policies, containment policies with IP exclusions, and managing quarantined files.
Topic 4	• Host Management and Setup: This domain addresses filtering and organizing hosts, disabling detections and understanding their effects, managing Reduced Functionality Mode situations, locating inactive sensors and their retention, and utilizing relevant management reports.

Exam CCFA-200b Simulations – Free PDF Exam Objectives Pdf Provider for CCFA-200b: CrowdStrike Certified Falcon Administrator - 2024 Version

Our CCFA-200b exam questions not only includes the examination process, but more importantly, the specific content of the exam. In previous years' examinations, the hit rate of CCFA-200b learning quiz was far ahead in the industry. We know that if you really want to pass the exam, our study materials will definitely help you by improving your hit rate as a development priority. After using CCFA-200b training prep, you will be more calm and it is inevitable that you will get a good result.

CrowdStrike Certified Falcon Administrator - 2024 Version Sample Questions (Q47-Q52):

NEW QUESTION # 47

An inactive host that does not contact the Falcon cloud will be automatically removed from the Host Management and Trash pages after how many days?

- A. 90 Days
- B. 45 Days
- C. 60 Days
- D. 75 Days

Answer: A

Explanation:

An inactive host that does not contact the Falcon cloud will be automatically removed from the Host Management and Trash pages after 90 days. An inactive host is a host that has not communicated with the Falcon platform for more than seven days. An inactive host will be moved from the Host Management page to the Trash page after seven days of inactivity. An inactive host will remain in the Trash page for 90 days before being permanently deleted from the Falcon platform. You can restore an inactive host from the Trash page if it becomes active again within 90 days.

NEW QUESTION # 48

An inactive host does not contact the Falcon cloud. What is the default number of days after which it is automatically removed from the Host Management page?

- A. 30 Days
- B. 90 Days
- C. 45 Days

Answer: C

Explanation:

Inactive hosts are automatically removed from Host Management after 45 days of inactivity. Falcon considers hosts inactive when they have not reported to the cloud within the relevant timeframe. The Inactive Sensors reporting area is used to identify sensors that have not checked in, and the course guide notes that sensors inactive for more than 45 days are deleted from the active host view. This lifecycle behavior keeps Host Management from accumulating stale endpoint records indefinitely. Thirty days is too short for the default automatic removal period, and ninety days is longer than the documented default. Administrators should review inactive

sensors regularly to identify decommissioned systems, connectivity problems, or deployment coverage gaps before records age out.

NEW QUESTION # 49

Where can you find information about all supported operating systems for the Falcon sensor?

- A. Sensor Release Notes
- **B. Documentation**
- C. News
- D. Sensor Downloads

Answer: B

NEW QUESTION # 50

When configuring a third-party integration to communicate with the Falcon API, which credential combination must be generated first?

- **A. API Client and Secret Key**
- B. OAuth2 Token and Client Secret
- C. Integration Key and Customer ID
- D. Access Key and Secret Key

Answer: A

Explanation:

Third-party integrations require an API Client and Secret Key . Falcon API access is configured by creating an API client with the required scopes, then securely storing the generated client ID and secret. The integration uses those credentials to request OAuth2 tokens and interact with the Falcon APIs according to the assigned scopes. An OAuth2 token is obtained after the client credentials are created; it is not the first credential combination generated. "Access Key and Secret Key" resembles cloud provider terminology, while

"Integration Key and Customer ID" is not the standard Falcon API credential pair. The CCFA user and API management material emphasizes creating scoped API clients and protecting the secret because it is shown only at creation time.

NEW QUESTION # 51

You are assigning sensor group tags during installation. What is the maximum allowed length of all tags?

- **A. 256 characters**
- B. 100 characters
- C. 237 characters
- D. 50 characters

Answer: A

Explanation:

The combined maximum length of all sensor grouping tags is 256 characters , including comma separators.

Grouping tags are assigned during installation using the appropriate installer parameter and can later be used in Host Management and dynamic host group rules. Because multiple tags can be applied to a host, Falcon enforces a combined-length limit across all tags rather than only a per-tag limit in this context. Exceeding this value can cause installation or tagging behavior to fail or produce incomplete tag assignment. The other choices are not the documented maximum. CCFA sensor deployment guidance specifically states that when using multiple tags, the combined length of all tags for a host, including comma separators, cannot exceed 256 characters.

NEW QUESTION # 52

.....

Our company has always been keeping pace with the times, so we are carrying out renovation about CCFA-200b training braindumps all the time to meet the different requirements of the diversified production market. For it is obvious that different people

have different preferences on CCFA-200b Preparation materials, thus we have prepared three versions of our CCFA-200b practice prep: the PDF, Software and the APP online to cover all of our customers' needs.
