

Precise Pass4sure 2V0-13.25 Study Materials - Complete & Perfect 2V0-13.25 Materials Free Download for VMware 2V0-13.25 Exam

- 100% Exam Passing and Money Back Guarantee
- Updated Pass4sure 2V0-621 Dumps PDF & Test Engine
- VMware VCP6-DCV 2V0-621 Questions and Answers
- 180 Days 2V0-621 Braindumps Free Update
- Get Complete 2V0-621 PDF and Test Engine Package for Full Confidence.

<http://www.pass4suredumps.in/2V0-621.html>

P.S. Free 2026 VMware 2V0-13.25 dumps are available on Google Drive shared by PDF4Test: <https://drive.google.com/open?id=161MZz-DibLuFsmcElj6QgfEx5Fln0d6l>

If you are finding a study material to prepare your exam, our material will end your search. Our 2V0-13.25 exam torrent has a high quality that you can't expect. I think our 2V0-13.25 prep torrent will help you save much time, and you will have more free time to do what you like to do. I can guarantee that you will have no regrets about using our 2V0-13.25 Test Braindumps. When the time for action arrives, stop thinking and go in, try our 2V0-13.25 exam torrent, you will find our products will be a very good choice for you to pass your exam and get your certificate in a short time.

The efficiency of our 2V0-13.25 study materials can be described in different aspects. 2V0-13.25 practice guide is not only financially accessible, but time-saving and comprehensive to deal with the important questions trying to master them efficiently. You can obtain our 2V0-13.25 Preparation engine within five minutes after you pay for it successfully and then you can study with it right away. Besides, if you have any question, our services will solve it at the first time.

2V0-13.25 test dump, 2V0-13.25 pass exam

No matter how good the product is users will encounter some difficult problems in the process of use, and how to deal with these problems quickly becomes a standard to test the level of product service. Our 2V0-13.25 real exam materials are not exceptional

also, in order to enjoy the best product experience, as long as the user is in use process found any problem, can timely feedback to us, for the first time you check our 2V0-13.25 Exam Question performance, professional maintenance staff to help users solve problems. Our 2V0-13.25 learning reference files have a high efficient product maintenance team, a professional staff every day real-time monitoring the use of the user environment and learning platform security, even in the incubation period, we can accurate solution for the user, for the use of the user to create a safer environment.

VMware Cloud Foundation 9.0 Architect Sample Questions (Q30-Q35):

NEW QUESTION # 30

An architect is responsible for designing a VMware Cloud Foundation (VCF)-based private cloud for a customer. The architect noted the following requirements during a design workshop:

- * Co-locate application workloads with VCF management component workloads within the same vSphere cluster.
- * Shared storage data is always available and 100% current in the event of a single site outage.
- * Have two sites available no more than 10 miles apart (10ms latency) connected with high-speed network technology to host their virtual infrastructure.
- * Protect against outages of a single site designated as an availability zone.

Which two storage technologies could meet the stated requirements? (Choose two.)

- A. vSAN
- B. vSphere Virtual Volumes (vVols)
- C. VMFS on Fibre Channel (FC)
- D. NVMe over Fibre Channel (FC)
- E. NVMe over TCP

Answer: A,B

Explanation:

According to VMware Cloud Foundation 9.0 documentation, when a stretched cluster is deployed across sites with sub-5ms latency and high-speed interconnects, vSAN can be configured for zero RPO (Recovery Point Objective), ensuring 100% data consistency and availability in the event of a site failure. vSAN supports co-locating management and application workloads and provides the shared storage functionality with automatic failover capabilities.

Additionally, vSphere Virtual Volumes (vVols) provide granular control of virtual machine storage, and when backed by a storage system that supports replication and failover across sites (with support for VASA

3.0 or later), vVols can meet the same requirements for data availability and disaster recovery.

NEW QUESTION # 31

Which of the following describe vSphere snapshots? (Select all that apply.)

- A. Are used for long-term backups
- B. Capture the state of a VM at a specific time
- C. Allow rollback to a previous state
- D. Improve VM performance

Answer: B,C

Explanation:

Snapshots capture VM state and allow rollbacks but are not for backups.

NEW QUESTION # 32

Which VMware tools can help streamline cloud migration in VMware Cloud Foundation?

- A. VMware vRealize Automation
- B. VMware HCX
- C. VMware NSX
- D. VMware vSphere

Answer: A,B

Explanation:

VMware HCX and vRealize Automation streamline cloud migration in VMware Cloud Foundation.

NEW QUESTION # 33

How do Broadcom's network solutions improve VMware vSphere performance?

- A. High reliability
- B. Network offloading
- C. Low latency
- D. High throughput

Answer: A,B,C,D

Explanation:

Broadcom network solutions enhance throughput, reduce latency, offload networking tasks, and ensure reliability in VMware vSphere.

NEW QUESTION # 34

A VMware Cloud Foundation multi-AZ (Availability Zone) design requires that: All management components remain centralized. The availability SLA must be no less than 99.99%.

Which two design decisions would help meet these requirements? (Choose two.)

- A. Implement VMware Live Recovery between the selected AZs.
- B. Select two close proximity AZs and configure a stretched management workload domain.
- C. Select two distant AZs and configure separate management workload domains.
- D. Implement separate VLANs for the infrastructure management components within each AZ.
- E. Implement a stretched L2 VLAN for the infrastructure management components between the AZs.

Answer: A,B

Explanation:

The requirements specify centralized management components and a 99.99% availability SLA (allowing ~52 minutes of downtime per year) in a VMware Cloud Foundation (VCF) 5.2 multi-AZ design. In VCF, management components (e.g., SDDC Manager, vCenter, NSX Manager) are typically deployed in a Management Domain, and multi-AZ designs leverage availability zones for resilience.

Let's evaluate each option:

Option A: Implement a stretched L2 VLAN for the infrastructure management components between the AZs A stretched L2 VLAN extends network segments across AZs, potentially supporting centralized management. However, it doesn't inherently ensure 99.99% availability without additional HA mechanisms (e.g., vSphere HA, NSX clustering). The VCF 5.2 Architectural Guide notes that L2 stretching alone lacks failover orchestration and may introduce latency or single points of failure if not paired with a stretched cluster, making it insufficient here.

Option B: Select two distant AZs and configure separate management workload domains Separate management workload domains in distant AZs decentralize management components (e.g., separate SDDC Managers, vCenters), violating the requirement for centralization. The VCF 5.2 Administration Guide states that multiple management domains increase complexity and don't inherently meet high availability SLAs without cross-site replication, ruling this out.

Option C: Implement VMware Live Recovery between the selected AZs

VMware Live Recovery (part of VMware's DR portfolio, integrating Site Recovery Manager and vSphere Replication) provides disaster recovery across AZs. It ensures centralized management components (in one AZ) can fail over to a secondary AZ, maintaining an RTO/RPO that supports

99.99% availability when properly configured (e.g., <5-minute failover with replication). The VCF 5.2 Architectural Guide recommends Live Recovery for multi-AZ resilience while keeping management centralized, making it a strong fit.

Option D: Implement separate VLANs for the infrastructure management components within each AZ Separate VLANs per AZ enhance network isolation but imply distributed management components across AZs, contradicting the centralized requirement. Even if management is centralized in one AZ, separate VLANs don't directly improve availability to 99.99% without HA or DR mechanisms, per the VCF 5.2 Networking Guide.

Option E: Select two close proximity AZs and configure a stretched management workload domain A stretched management workload domain spans two close AZs (e.g., <10ms latency) using vSphere HA, vSAN stretched clusters, and NSX federation. This keeps management components centralized (single SDDC Manager, vCenter) while achieving 99.99% availability through synchronous replication and automatic failover. The VCF 5.2 Architectural Guide highlights stretched clusters as a best practice for

multi-AZ designs, ensuring minimal downtime (e.g., seconds during host/AZ failure), meeting the SLA.

Conclusion:

C: VMware Live Recovery enables centralized management with DR failover, supporting 99.99% availability.

E: A stretched management domain in close AZs ensures centralized, highly available management with near-zero downtime.

These decisions align with VCF 5.2 multi-AZ best practices.

NEW QUESTION # 35

.....

Are you feeling anxious about taking the VMware Cloud Foundation 9.0 Architect (2V0-13.25) exam? Our customizable practice test questions will help you overcome your anxiety and prepare for the actual exam. With each attempt, you will receive a score report that will help you identify and correct your mistakes before your final attempt. Our web-based practice exam creates a similar situation to the 2V0-13.25 Real Exam Questions, making it easier for you to pass. Purchase our VMware Cloud Foundation 9.0 Architect (2V0-13.25) practice test material today and say goodbye to exam anxiety!
