## 312-38 Real Question - 312-38 Testdump

If you want to pass the exam smoothly buying our EC-Council Certified Network Defender CND guide dump is your ideal choice. They can help you learn efficiently, save your time and energy and let you master the useful information. Our passing rate of 312-38 study tool is very high and you needn't worry that you have spent money and energy on them but you gain nothing. We provide the great service after you purchase our 312-38 cram training materials and you can contact our customer service at any time during one day. It is a pity if you don't buy our 312-38 study tool to prepare for the test EC-COUNCIL certification.

## EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q411-Q416):

### NEW QUESTION # 411

Which of the following tools is used to ping a given range of IP addresses and resolve the host name of the remote system?

- A. Nmap
- B. Netscan
- C. Hping
- **D. SuperScan**

**Answer: D**

### NEW QUESTION # 412

Which of the following is a management process that provides a framework for promoting quick recovery and the capability for an effective response to protect the interests of its brand, reputation, and stakeholders?

- A. Log analysis
- B. Patch management
- **C. Business Continuity Management**
- D. Incident handling

**Answer: C**

Explanation:

Business Continuity Management is a management process that determines potential impacts that are likely to threaten an organization. It provides a framework for promoting quick recovery and the capability for an effective response to protect the interests of its brand, reputation, and stakeholders. Business continuity management includes disaster recovery, business recovery, crisis management, incident management, emergency management, product recall, contingency planning, etc.

Answer option D is incorrect. Patch management is an area of systems management that involves acquiring, testing, and installing multiple patches (code changes) to an administered computer system. Patch management includes the following tasks: Maintaining current knowledge of available patches Deciding what patches are appropriate for particular systems Ensuring that patches are installed properly Testing systems after installation, and documenting all associated procedures, such as specific configurations required A number of products are available to automate patch management tasks, including RingMaster's Automated Patch Management, PatchLink Update, and Gibraltar's Everguard. Answer option A is incorrect. This option is invalid. Answer option B is incorrect. Incident handling is the process of managing incidents in an Enterprise, Business, or an Organization. It involves the thinking of the prospective suitable to the enterprise and then the implementation of the prospective in a clean and manageable manner. It involves completing the incident report and presenting the conclusion to the management and providing ways to improve the process both from a technical and administrative aspect. Incident handling ensures that the overall process of an enterprise runs in an uninterrupted continuity.

### NEW QUESTION # 413

Which of the following protocols is used for routing of voice conversation over the Internet?

- **A. VoIP**
- B. DHCP
- C. IP
- D. DNS

**Answer: A**

#### NEW QUESTION # 414

Which of the following routing metrics refers to the length of time that is required to move a packet from source to destination through the internetwork?

- A. Path length
- B. Load
- C. Bandwidth
- **D. Routing delay**

**Answer: D**

Explanation:

Routing delay refers to the length of time that is required to move a packet from source to destination through the internetwork. Delay depends on many factors, including the following: Bandwidth of intermediate network links Port queues at each router along the way Network congestion on all intermediate network links Physical distance to be traveled Since delay is a conglomeration of several important variables, it is a common and useful metric. Answer option D is incorrect. Path length is defined as the sum of the costs associated with each link traversed. Answer option B is incorrect. Bandwidth refers to the available traffic capacity of a link. Answer option C is incorrect. Load refers to the degree to which a network resource, such as a router, is busy.

#### NEW QUESTION # 415

John is a network administrator and is monitoring his network traffic with the help of Wireshark. He suspects that someone from outside is making a TCP OS fingerprinting attempt on his organization's network. Which of the following Wireshark filter(s) will he use to locate the TCP OS fingerprinting attempt?

- A. `Tcp.flags=0x00`
- **B. `Tcp.options.mss_val<1460`**
- C. `Tcp.flags==0x2b`
- D. `Tcp.options.wscale_val==20`

**Answer: B**

Explanation:

TCP OS fingerprinting attempts can be identified by analyzing various TCP/IP stack behaviors, one of which is the TCP Maximum Segment Size (MSS). The MSS value indicates the size of the largest segment of TCP data that a device is willing to receive. Different operating systems have different default MSS values, and a value less than 1460 can suggest an OS fingerprinting attempt, as it may indicate that the sender is trying to avoid fragmentation or is probing to discover the OS based on MSS response.

#### NEW QUESTION # 416

.....

This society is ever – changing and the test content will change with the change of society. You don't have to worry that our 312-38 study materials will be out of date. In order to keep up with the change direction of the exam, our question bank has been constantly updated. We have dedicated IT staff that checks for updates every day and sends them to you automatically once they occur. The update for our 312-38 Study Materials will be free for one year and half price concession will be offered one year later.
