Data-Architect최신 업데이트 시험공부자료 완벽한 시험공부

ExamPassdump의 경험이 풍부한 IT전문가들이 연구제작해낸 Salesforce인증 Data-Architect덤프는 시험패스율이 100%에 가까워 시험의 첫번째 도전에서 한방에 시험패스하도록 도와드립니다. Salesforce인증 Data-Architect덤프는 Salesforce인증 Data-Architect최신 실제시험문제의 모든 시험문제를 커버하고 있어 덤프에 있는 내용만 공부하시면 아무런 걱정없이 시험에 도전할수 있습니다.

최신 Salesforce Application Architect Data-Architect 무료샘플문제 (Q163-Q168):

질문 # 163

Universal Containers (UC) is transitioning from Classic to Lightning Experience.

What does UC need to do to ensure users have access to its notices and attachments in Lightning Experience?

- A. Add Notes and Attachments Related List to page Layout in Lightning Experience.
- B. Manually upload Notes in Lightning Experience.
- C. Manually upload Attachments in Lightning Experience.
- D. Migrate Notes and Attachment to Enhanced Notes and Files a migration tool

정답: D

질문 # 164

UC is trying to switch from legacy CRM to salesforce and wants to keep legacy CRM and salesforce in place till all the functionality is deployed in salesforce. The want to keep data in synch b/w Salesforce, legacy CRM and SAP. What is the recommendation.

- A. Integrate SAP with Salesforce, SAP to legacy CRM but not legacy CRM to Salesforce
- B. Do not integrate legacy CRM to Salesforce, but integrate salesforce to SAP
- C. Suggest MDM solution and link MDM to salesforce and SAP
- D. Integrate legacy CRM to salesforce and keep data in synch till new functionality is in place

정답: A,C

설명:

Integrate SAP with Salesforce, SAP to legacy CRM but not legacy CRM to Salesforce. This is a good recommendation because it allows both Salesforce and the legacy CRM to interact with the ERP system, which can be the source of truth for some data entities. However, it avoids creating a direct connection between Salesforce and the legacy CRM, which can cause data duplication and synchronization issues. Suggest MDM solution and link MDM to salesforce and SAP. This is another good recommendation because it can help manage the data lifecycle and quality across multiple systems, as well as provide a single view of the customer data

질문 # 165

To avoid creating duplicate Contacts, a customer frequently uses Data Loader to upsert Contact records into Salesforce. What common error should the data architect be aware of when using upsert?

- A. Errors with duplicate external Id values within the same CSV file.
- B. Errors with records being updated and inserted in the same CSV file.
- C. Errors with using the wrong external Id will cause the load to fail.
- D. Errors when a duplicate Contact name is found cause upsert to fail.

정답: A

설명:

Data Loader uses external Id fields to match records in the CSV file with records in Salesforce during an upsert operation. If the CSV file contains duplicate external Id values within the same file, Data Loader will throw an error saying "Duplicate Id Specified" and will not process those records. Therefore, it is important to ensure that the CSV file does not have any duplicate external Id values before using Data Loader to upsert records.

질문 # 166

UC has to built a B2C ecommerce site on Heroku that shares customer and order data with a Heroku Postgres database. UC is currently utilizing Postgres as the single source of truth for both customers and orders. UC has asked a data architect to replicate the data into salesforce so that salesforce can now act as the system of record.

What are the 3 considerations that data architect should weigh before implementing this requirement? Choose 3 answers:

- A. Ensure the data is CRM center and able to populate standard of custom objects.
- B. Determine if the data is driver of key process implemented within salesforce.
- C. Consider whether the data is required for sales reports, dashboards and KPI's.
- D. Ensure there is a tight relationship between order data and an enterprise resource planning (ERP) application.
- E. A selection of the tool required to replicate the data.

정답: A,B

설명:

a. - Heroku Connect is required but this is confusing

질문 # 167

UC recently migrated 1 Billion customer related records from a legacy data store to Heroku Postgres. A subset of the data need to be synchronized with salesforce so that service agents are able to support customers directly within the service console. The remaining non- synchronized set of data will need to be accessed by salesforce at any point in time, but UC management is concerned about storage limitations.

정답: C

Virtualizing the remaining set of data with salesforce connect and external objects is the best way to meet the requirements with minimal effort, as it allows salesforce to access data stored in Heroku Postgres without storing it in salesforce. This reduces the storage limitations and avoids data duplication. Heroku connect can bi-directionally sync data between systems, but it requires more configuration and maintenance. Making callouts to Heroku Postgres and persisting the data in salesforce may not be feasible for 1 billion records. Migrating the data to big objects may incur additional costs and require custom code to use async SOQL.
