Plat-Dev-301 Braindump Free & Plat-Dev-301 New Question

As is known to us, perfect after-sales service for buyers is a very high value. Our Plat-Dev-301 guide torrent not only has the high quality and efficiency but also the perfect service system after sale. If you decide to buy our Plat-Dev-301 test torrent, we would like to offer you 24-hour online efficient service, you have the right to communicate with us without any worries at any time you need, and you will receive a reply, we are glad to answer your any question about our Plat-Dev-301 Guide Torrent. You have the right to communicate with us by online contacts or by an email. The high quality and the perfect service system after sale of our Plat-Dev-301 exam questions have been approbated by our local and international customers. So you can rest assured to buy.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q184-Q189):

NEW QUESTION # 184

A developer is creating a Lightning web component that displays a list of records in a lightning-datatable. After saving a new record

to the database, the list is not updating.

What should the developer change in the code above for this to happen?

- A. Create a variable to store the result and call refreshApex().
- B. Call refreshApex() ON this.data.
- C. Create a new variable to store the result and annotate it with @track.
- D. Add the @track decorator to the data variable.

Answer: A

Explanation:

In Lightning Web Components (LWC), the data displayed in a component is not automatically refreshed when a new record is saved to the database. To refresh the displayed list of records in a lightning-datatable after a save operation, developers should use the refreshApex() function. This function is imported from the @salesforce/apex module and is used to refresh the cache and re-execute the Apex wire method to fetch the latest data from the server. The @track decorator is no longer necessary in most cases due to reactive properties being the default behavior in LWC as of Spring '20 release. Also, calling refreshApex() on this.data directly or creating a new tracked variable will not initiate a refresh of the cached data.

NEW QUESTION # 185

When the sales team views an individual customer record, they need to see recent interactions for the customer. These interactions can be sales orders, phone calls, or Cases. The date range for recent interactions will be different for every customer record type. How can this be accomplished?

- A. Use a Lightning component to query and display interactions based on record type that is passed in using a design:attribute from the Lightning page.
- B. Use batch Apex to query for the most recent interactions when the customer view screen is loaded.
- C. Use Lightning Flow to read the customer's record type, and then do a dynamic query for recent interactions and display on the View page.
- D. Use a dynamic form on the customer record page to display recent interactions.

Answer: A

Explanation:

A Lightning component can dynamically query and display interactions based on the customer's record type. The component can receive the record type as a parameter and adjust the query accordingly, providing the required functionality without batch processing or additional configurations.

NEW QUESTION # 186

Universal Containers uses a custom Lightning page to provide a mechanism to perform a step-by-step wizard search for Accounts. One of the steps in the wizard is to allow the user to input text into a text field, ERP Number_c, that is then used in a query to find matching Accounts.

Which step should be taken to resolve the issue?

- A. Mark the ERP_Nuncker = field as an external ID.
- B. Move the SOQL query to within an asynchronous process.
- C. Perform the SOQL query as part of a for loop.
- D. Mark the ERP_Number__c field as required.

Answer: B

Explanation:

If a SOQL query is causing performance issues due to a non-selective query on a large data volume, moving the query to an asynchronous process such as a Batch Apex or Queueable Apex can help resolve the issue. This allows the query to run in the background without affecting the user's experience.

NEW QUESTION # 187

Universal Containers (UC) has an ERP system that stores customer Information, When an Account is created in Salesforce, the ERP system's REST endpoint for creating new customers must automatically be called with the Account information. If the call to the ERP system fails, the Account should still be created. Accounts in the UC org are only created, one at a time, by users in the UC customer on-boarding department.

What should a developer implement to make the call to the ERP system's REST endpoint?

- A. Call a Queueable from a Trigger
- B. REST call from JavaScript
- C. Apex Continuation
- D. Headless Quick Action

Answer: A

Explanation:

Since the requirement is to make a callout to an external ERP system when an Account is created and still allow for the Account creation even if the call fails, a Queueable class called from a trigger is the best solution. Queueable Apex allows you to submit jobs for asynchronous processing similar to future methods but with additional benefits such as chaining jobs and monitoring the job status.

By using a Queueable, the callout can be made after the Account is created, which respects the Salesforce order of execution and avoids the limitation of callouts not being allowed after DML operations in the same transaction. This approach also does not block the user interface or the creation of the Account record if the callout to the ERP system takes a long time or fails.

NEW QUESTION # 188

What is a benefit of JavaScript remoting over Visualforce Remote Objects?

- A. Allows for specified re-render targets
- B. Supports complex server-side application logic
- C. Does not require any Apex code
- D. Does not require any JavaScript code

Answer: B

Explanation:

JavaScript remoting in Visualforce allows for the execution of complex server-side application logic without the need to refresh the entire page, providing a more dynamic user experience. It supports more complex operations than Visualforce Remote Objects, which are intended for basic CRUD operations.

NEW QUESTION # 189

.....

Different with other similar education platforms on the internet, the Salesforce Certified Platform Developer II - Multiple Choice guide torrent has a high hit rate, in the past, according to data from the students' learning to use the Plat-Dev-301 test torrent, 99% of these students can pass the qualification test and acquire the qualification of their yearning, this powerfully shows that the information provided by the Plat-Dev-301 study tool suit every key points perfectly, targeted training students a series of patterns and problem solving related routines, and let students answer up to similar topic. It may say, the Plat-Dev-301 Test Torrent can let users in a short time, accurately grasp the proposition trend of each year, doing all effects in the process of the difficulties in the hot, user's weak link and targeted training, and exercise the user's solving problem ability, eventually achieve the objectives of the pass Salesforce Certified Platform Developer II - Multiple Choice qualification test.
