NEW QUESTION # 11

What are two main features in Amazon Web Services (AWS) network access control lists (NACLs)? (Choose two.)

- A. You cannot use NACLs and Security Groups at the same time.
- B. NACLs are stateless, and inbound and outbound rules are used for traffic filtering.
- C. NACLs are tied to an instance.
- D. The default NACL is configured to allow all traffic.

Answer: B,D

Explanation:

The default NACL in AWS allows all inbound and outbound traffic until modified.

NACLs are stateless, meaning both inbound and outbound rules must be defined to allow return traffic.

NACLs apply at the subnet level, not tied to individual instances, and they can be used together with Security Groups.

NEW QUESTION # 13

An administrator is configuring a software-defined network (SDN) connector in FortiWeb to dynamically obtain information about existing objects in an Amazon Elastic Kubernetes Service (EKS) cluster.

Which AWS policy should the administrator attach to a user to achieve this goal?

- A. AmazonEKSClusterPolicy
- B. AmazonEKSConnectorServiceRolePolicy
- C. AmazonEKSServicePolicy
- D. AmazonEKSClusterPolicy

Answer: A
