\* Option A (To capture a static label on the screen that should be checked during test execution):

Correct. Static labels (e.g., field names or titles) are often captured to verify UI consistency or screen navigation during test runs. This ensures the test validates expected screen content.

\* Option B (To capture a value in a text field that should be stored as a variable): Correct. The

"Read" function can extract dynamic values (e.g., an invoice number) from text fields, storing them as variables for use in subsequent steps, such as validations or inputs.

\* Option C (To capture an error message on the screen that can be used later): Incorrect. While error messages can be validated, the "Read" button is not typically used for this; instead, assertions or specific error-handling steps are recorded separately.

\* Option D (To capture text in a message screen that can be used for data binding later): Incorrect.

Message screens (e.g., pop-ups) are handled differently, often via specific actions like "Confirm" or "Check Message," not the generic "Read" function.
