

Preparation SAP C-S43-2601 Store | Test C-S43-2601 Simulator Fee

Perhaps you have had such an unpleasant experience about what you brought in the internet was not suitable for you in actual use, to avoid this, our company has prepared C-S43-2601 free demo in this website for our customers. The content of the free demo is part of the content in our real C-S43-2601 Study Guide. Therefore, you can get a comprehensive idea about our real C-S43-2601 study materials. And you will find there are three kinds of versions of C-S43-2601 learning materials for you to choose from namely, PDF Version Demo, PC Test Engine and Online Test Engine.

SAP C-S43-2601 Exam Syllabus Topics:

Section	Objectives

Topic 1: Asset Management in SAP S/4HANA Cloud Private Edition	- Technical Objects • 1. Equipment and functional locations • 2. Bills of materials for assets - Enterprise Asset Management Overview • 1. Asset lifecycle management • 2. Maintenance organization structure - Notifications and Work Management • 1. Maintenance notifications • 2. Work order lifecycle management - Maintenance Execution • 1. Execution confirmation and completion • 2. Work order processing - Integration Topics • 1. Integration with finance and procurement • 2. Cross-module integration in S/4HANA - Analytics and Reporting • 1. Asset performance analysis • 2. Maintenance KPIs and reporting - Maintenance Planning • 1. Task lists and maintenance plans • 2. Preventive maintenance strategies

Test C-S43-2601 Simulator Fee - C-S43-2601 Instant Access

If you want to pass the exam smoothly buying our SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) guide dump is your ideal choice. They can help you learn efficiently, save your time and energy and let you master the useful information. Our passing rate of C-S43-2601 study tool is very high and you needn't worry that you have spent money and energy on them but you gain nothing. We provide the great service after you purchase our C-S43-2601 cram training materials and you can contact our customer service at any time during one day. It is a pity if you don't buy our C-S43-2601 study tool to prepare for the test SAP certification.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Schedule a Maintenance Plan

The project team evaluates during the implementation project the scheduling of Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Schedule a Maintenance Plan

Display a generated Maintenance Order

Schedule the previously created Maintenance Plan. The following prerequisites have to be met:

The next upcoming call is the 4 MON Maintenance Package

Calculate the Completion Date of the last Maintenance Package as follows: Today's date minus 4 weeks (e.g. today's date: 15th of December >>> Completion Date: 17th of November) The Call Date is always 10 days before the Plan Date.

Note:

Check your Maintenance Plan and adapt it, if necessary, before you schedule it.

Check the following information in the generated Maintenance Order:
number of order operations: 2
Maintenance Plan: number of the previously created Maintenance Plan
Last Included Task List: A / TL-## / 1

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 9 Overview

The goal of this task is to trigger the maintenance schedule you built in Task 8 so that the system generates an actual work order. You must meet specific scheduling conditions to ensure the right maintenance cycle (the 4- month package) is triggered.

Step 1: Adapt Scheduling Parameters (IP02)

Before starting the schedule, you must ensure the "Call Date" rules are correct.

- * Transaction : Enter IP02 (Change Maintenance Plan).
- * Maintenance Plan : Enter the number you saved in Task 8 and press Enter .
- * Scheduling Parameters Tab :
- * Call Horizon : Adjust this so that the Call Date occurs exactly 10 days before the Plan Date.
- * Note: If your system uses percentages, you will need to calculate the percentage of the 4-month cycle that results in a 10-day lead time.
- * Save your changes.

Step 2: Schedule the Plan (IP10)

Now you will "start" the clock for this maintenance schedule.

- * Transaction : Enter IP10 (Schedule Maintenance Plan).
- * Maintenance Plan : Enter your plan number and press Enter .
- * Start Scheduling : Click the Start icon (or go to Maintenance plan > Scheduling > Start).
- * Enter the "Start Date" / "Completion Date" :
- * The Rule : You must use Today's date minus 4 weeks .
- * Example: If today is April 19, enter March 22.
- * Press Enter . The system will calculate the next calls.
- * Verify the Package : Ensure the next upcoming call is indeed the 4 MON (4-month) Maintenance Package.
- * Save (Floppy Disk icon). This will generate a new Maintenance Order number.

Step 3: Verify the Generated Maintenance Order

You must now check that the order was created correctly based on the rules of your Task List (Task 7) and Maintenance Plan (Task 8).

- * Display Order : In IP10 , select the line for the generated call and click the Display Order icon (or use transaction IW33 with the new order number).
- * Check the following three items :
- * Operations : Verify there are exactly 2 operations in the order (the Monthly and 4-Month tasks).
- * Maintenance Plan : Confirm the order shows your specific Maintenance Plan number.
- * Task List : Verify the "Last Included Task List" is A / TL-48 / 1 .

NEW QUESTION # 11

In the following assessment you will slip into the role of a consultant implementing SAP S/4HANA Asset Management OnPrem/Private Cloud for Machine Manufacturing Inc. . You need to fulfill various system tasks to setup certain business processes and test them.

Note:

In the task descriptions is no information provided if and/or how Asset Management specific customizing settings need to be adapted. This is an implicit part of the exam.

Note:

There is no information provided which UI to use when creating the data in the system e.g. SAP GUI, SAP Fiori Launchpad. This is an implicit part of the exam.

Your performance in each exercise will be evaluated to produce an overall score that determines a pass or fail for the exam. Please read every exercise carefully and enter any data exactly as requested without alteration. Some input data is provided in tables or in the task descriptions, however your input data is not limited to these parameters.

Use the following Logon information for all tasks:

System	User Name / ID	Password
T41 400	S43900-##	Welcome1

Caution:

Please make sure you are always using your assigned group number (denoted as ## in the following) .

Your results will not be recorded if you are not using your own group number.

For example, if your group number is 10 i.e. (## = 10), your user will be S43900-10.

To find your group number: Click the Access button on the practice system details page. You will find your group number displayed beneath the "Get started" header in the pop-up window. Alternatively, in your Windows Terminal Server, choose the Windows button in the lower left corner. The Start Menu opens. In its upper left corner, choose the Expand icon (three white lines). Find your user name next to the user icon on the left side of the menu - the last two digits of the user name are your group number ##.

Note:

To access your backend system in the Windows Terminal Server, open the SAP Logon application and start the T41 system (Client 400). You can access the SAP Fiori Launchpad from the SAP Menu in T41. Always work with user S43900-## in order to have the required roles in place for your tasks.

Caution:

To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and stay within your allocated resources to help maintain a stable and efficient environment for everyone and to ensure your data is evaluated properly.

Note:

In the following, you will be asked to create new transaction data, among others. If you are asked to create one specific new transaction data object, and - for whatever reason - you create more than one of that kind, SAP will evaluate your newest version only. For example: if you are asked to create a Maintenance Order of a specific Order Type in an exercise and you create three different Maintenance Orders of a specific Order Type, only your order with the highest order number will be evaluated.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task Objective

In this assessment, you assume the role of a consultant implementing SAP S/4HANA Asset Management for Machine Manufacturing Inc. . Your goal is to set up and test specific business processes through various system tasks.

Step 1: Identify Your Assigned Group Number (##)

This is the most critical step, as your results will only be recorded if you use your specific group number, denoted as ## in all instructions.

How to find your number:

* Method A: Click the Access button on the practice system details page; your group number is displayed beneath the "Get started" header.

* Method B: In the Windows Terminal Server, click the Windows button (Start Menu), select the Expand icon (three white lines), and find your user name next to the user icon. The last two digits of that name are your group number.

Step 2: Access the System

You must use the specific credentials provided to ensure you have the required roles for the assessment.

Logon Credentials:

* System : T41

* Client : 400

* User Name/ID : S43900-## (e.g., if your group number is 10, use S43900-10)

* Password : Welcome1

Connection Methods:

* SAP GUI : Open the SAP Logon application in the Windows Terminal Server and start the T41 system (Client 400).

* SAP Fiori Launchpad : This can be accessed directly from the SAP Menu within the T41 system.

Step 3: Understand Implicit Exam Rules

The assessment does not provide exhaustive instructions; certain technical decisions are considered part of the exam.

* Customizing : You must determine if and how specific Asset Management customizing settings need to be adapted.

* User Interface : You are free to choose between the SAP GUI or SAP Fiori Launchpad to create data, as the instructions do not specify which to use.

* Data Accuracy : Enter all data exactly as requested in the tables or descriptions without any alterations.

Step 4: Evaluation of Transaction Data

If you are asked to create a specific transaction object (like a Maintenance Order) and you create multiple versions, the system will

only evaluate the newest version (the one with the highest identifying number).

Caution : To ensure your data is evaluated properly and to maintain system stability, stay strictly within the scope of the assigned exercises and your allocated resources.

NEW QUESTION # 12

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Create a Task List header
- * Create Task List operations
- * Create a Task List with 3 Task List operations. Maintenance Strategy Z## comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

Field	Value
Group	TL-##
Group Counter	1
Planning Plant	1010
Description	Regular Maintenance GR##
Work Center	MK-00
Work Center Plant	1010
Usage	4
Planner Group	P##
Maintenance Strategy	Z##

Use the following information for each Task List operation:

Field	Value
Work Ctr	MK-00
Plnt	1010
Control Key	PM01
Work	30
Unit	MIN

* Assign Maintenance Packages to the Task List Operations as follows:

- * Operation 10 is to be performed monthly.
- * Operation 20 is to be performed every 4 months.
- * Operation 30 is to be performed every 12 months.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.

Task 7: Create a General Task List

Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

Step 1: The Pre-requisite (Fixing Strategy Z48)

If you haven't done this yet, SAP will not let you save the Task List.

* Transaction : IP11 (Maintain Maintenance Strategies).

* Action : Click New Entries .

- * Strategy : Z48
- * Description : Strategy for Group 48
- * Strategy Unit : MON (Months).
- * Packages : On the left, double-click Packages , then click New Entries :
- * Line 1 : Cycle 1 / Unit MON / Text Monthly
- * Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
- * Line 3 : Cycle 12 / Unit MON / Text Yearly
- * Save (Floppy Disk icon).

Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what "Monthly" or "Yearly" means.

Step 2: Create Task List Header

- * Transaction : IA05 .
- * Initial Screen : Group TL-48, Group Counter 1. Press Enter .
- * Header Fields :
- * Description : Regular Maintenance GR48
- * Planning Plant : 1010
- * Work Center : MK-00 / Plant : 1010
- * Usage : 4 (Plant Maintenance)
- * Status : 4 (Released)
- * Planner Group : P48
- * Maint. Strategy : Z48

Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.

Step 3: Create Operations

- * Click the Operations button (F6) at the top.
- * Enter three rows with this data:
- * Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.
- * Op 20 : (Same as above).
- * Op 30 : (Same as above).

Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.

Step 4: Assign Maintenance Packages (The "Frequencies")

This is the most important part of Task 7. We tell SAP which operation happens when.

- * Select Row 10 (click the box at the far left of the row).
- * Go to Menu: Goto > Maintenance Packages .
- * Check the box for the 1 Month package. Click the Back (Green Arrow) icon.
- * Select Row 20 .
- * Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .
- * Select Row 30 .
- * Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .

Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.

Step 5: Save

- * Click the Save icon.
- * The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

NEW QUESTION # 13

Task 11: Classify a piece of Equipment

The project team evaluates during the implementation project the classification of Technical Objects in order to use Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Assign a class to a Technical Object
- * Assign characteristic values to a class
- * Assign class EQ11 value to Technical Object T-PA## .
- * Assign a characteristic value, so that Inspection Plan Q / CL-DE-00 / 1 is automatically found during the checklist process

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 11 Overview

This task involves classifying a piece of equipment so it can be used in the Checklist process . By assigning a specific class and characteristic values, you enable the system to automatically find the correct inspection plan when a maintenance order is created.

Step 1: Access the Equipment Master Record

To classify the equipment, you must first open its master record in "Change" mode.

* Transaction Code : Enter IE02 (Change Equipment) in the command field and press Enter .

* Equipment : Enter T-PA48 .

* Action : Press Enter to open the record.

Step 2: Assign the Class to the Equipment

Now you will link the equipment to a class that contains the required technical characteristics.

* Navigate : Click the Classification button in the top toolbar (or go to the Classes tab if available).

* Class Assignment :

* Class Type : Ensure this is set to 002 (Equipment Class).

* Class : Enter EQ11 .

* Action : Press Enter . The system will now display the characteristics associated with class EQ11 in the bottom half of the screen.

Explanation : Assigning a class is like giving the equipment a "category". Class EQ11 is specifically configured in this system to hold the data needed for checklist processing.

Step 3: Assign Characteristic Values

This is the critical step that tells the system exactly which inspection plan to use for this specific pump.

* Locate the Characteristic : In the values table, look for a characteristic related to "Inspection Plan" or "Checklist Group."

* Enter the Value : Assign the value so that Inspection Plan CL-DE-00 / 1 is automatically found.

* Note: Typically, you will enter CL-DE-00 in the "Inspection Plan Group" field and 1 in the "Group Counter" field.

* Action : Press Enter to validate the values.

Explanation : Characteristic values are the specific details for this asset. By entering these values, you "tag" the equipment so that whenever it is added to a maintenance order, the system knows to look for the CL-DE-00 checklist automatically.

Step 4: Save

* Action : Click the Save (floppy disk) icon.

* Confirmation : The system should display a message at the bottom saying: "Equipment T-PA48 changed."

NEW QUESTION # 14

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

* Create a Maintenance Order with Checklist

* Display a Maintenance Order with automatically generated Object List and Checklist.

* Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

Field	Value
Functional Location	##-01-PRD-01-03-HD
General Maintenance Task List	SAP / T-PMCLN / 1

* Display the previously created Maintenance Order with automatically generated Object List and Checklist.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

* Access the Transaction : Use transaction code IW31 (Create Maintenance Order).

* Initial Screen :

- * Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).
- * Press Enter .
- * Enter Header and Location Data :
- * Functional Location : Enter 48-01-PRD-01-03-HD .
- * Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).
- * Assign the Task List :
- * Go to the Operations tab or find the task list assignment section.
- * General Maintenance Task List : Enter A / T-PMCLN / 1 .
- * Press Enter to validate.
- * Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the "Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

- * Display the Order : Use transaction code IW33 and enter the order number you just created.
- * Verify the Object List :
- * Navigate to the Object List tab.
- * You should see the equipment or functional location listed here with a link to the checklist.
- * Verify the Checklist :
- * Look for a button or tab labeled Checklists or Inspection Lot within the order.
- * The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

NEW QUESTION # 15

.....

Our purchasing process is designed by the most professional experts, that's the reason why we can secure your privacy while purchasing our C-S43-2601 test guide. As the employment situation becoming more and more rigorous, it's necessary for people to acquire more C-S43-2601 skills and knowledge when they are looking for a job. Enterprises and institutions often raise high acquirement for massive candidates, and aim to get the best quality talents. Thus a high-quality C-S43-2601 Certification will be an outstanding advantage, especially for the employees, which may double your salary, get you a promotion. So choose us, choose a brighter future.
