### 問題 #140

Open the link to Book1 found on the desktop. Use the Superstore data source.  
Split the Customer Name field into two fields named First Name and Last Name.

- A. Send us your feedback on it.
- B. Send us your

答案: A

### 問題 #141

You have a table that contains the following data.

How should you complete the formula? (Drag the appropriate Options to the Answer Area and drop into the correct locations.)

答案:

解題說明:

Explanation:

To complete the formula, you should drag the option MAX from the list of options and drop it into the first blank space, and then drag the option [Sales] and drop it into the second blank space. The formula will look like this: Option (MAX) Option ([Sales]). This formula will calculate the maximum value of the sales field for each country. You can use this formula to create a calculated field that will show the highest sales amount for each country in your data source. References:

### 問題 #142

You have the following dataset.

When you use the dataset in a worksheet, you want Sales to appear automatically as shown in the following table.

What should you do?

- A. Create a calculated field that uses a formula of 'S' + str((Sales)/1000).
- B. Create a calculated field that uses a formula of 'S' \* str(Round((sales),2)) + 'k'
- C. Change the default number format of the Sales field
- D. Change the data type of the Sales field to String

答案: D

### 問題 #143

You have the following primary data source that contains a dimension named Dorm\_Code.

You receive the following secondary data source that contains updated dorm codes.

You need to bring the updated dorm codes into Tableau and use the codes in existing visualizations. The new dorm codes must use the existing field name of Dorm\_Code.

What should you do?

- A. Bring in the secondary table as a left join to the primary data source. From the Data Source page, select Create Calculated Field in the Dorm\_Name field and enter [Dorm\_Name\_New] in the calculation window
- B. Create a data blend and select Edit Primary Aliases to replace the primary data source alias values with values from the secondary data source
- C. Bring in the secondary data source as a union.
- D. Bring in the secondary data source by using relationships. From the Data pane, right-click Dorm\_Name select Replace Reference, and then select Dorm\_Name\_New

答案: D

解題說明:

Using relationships: You can use relationships to link the secondary data source with the primary data source based on a common field. This will allow you to use fields from both data sources in your visualization without creating new fields or duplicating data. You can then replace references to update the dimension values. For example, you can use relationships to link the updated dorm codes with the primary data source and then replace Dorm\_Code with Dorm\_Code\_New in your visualization.
