Huawei H19-619_V1.0 practice test software can be used on devices that range from mobile devices to desktop computers.

Huawei HCSP-Presales-Government Public Services V1.0 Sample Questions (Q173-Q178):

NEW QUESTION # 173

"One-Network Unified Management (#####)" means managing everything.

- A. False
- B. True

Answer: A

Explanation:

"One-Network Unified Management" refers to digital integration of urban governance resources, focusing on cross-department collaboration and precise management, not literal control of "everything." It aims for efficiency and accuracy rather than unlimited scope.

NEW QUESTION # 174

What types of large models are there?

- A. CV
- B. Multimodal
- C. NLP
- D. Scientific computing

Answer: A,B,C,D

Explanation:

Large models are typically categorized by task type: NLP (e.g., GPT), CV (e.g., ViT), multimodal (e.g., CLIP, combining text+image), and scientific-computing models (e.g., AlphaFold for protein structures).

NEW QUESTION # 175

Currently, all cities have a "citizen snapshot" (####) app/function that is simple, easy to use, and widely used by citizens.

- A. False
- B. True

Answer: A

Explanation:

Not all cities have such a feature deployed or widely adopted. Some smaller cities or rural areas may lack this function, or usage may be low due to weak promotion or incomplete functionality. The statement overgeneralizes a partial situation as if it were universal, so it is inaccurate.

NEW QUESTION # 176

A company has limited public-IP resources but needs its cloud tenants to access the Internet. Which cloud service fulfills this need?

- A. RDS (Relational Database Service)
- B. Cloud Disk
- C. NAT Gateway
- D. OBS (Object Storage Service)

Answer: C

Explanation:

A NAT Gateway allows private-network instances to share one public IP to reach the Internet, conserving public-IP resources. RDS and OBS provide storage functions only; Cloud Disk handles block storage, not networking.

NEW QUESTION # 177

The "intelligent approval" function can perfectly recognize and approve all content on application forms, with no human intervention required.

- A. False
- B. True

Answer: A

Explanation:

Intelligent approval relies on AI models and rules. In practice there are handwriting issues, non-standard forms, edge cases, and logic conflicts. Current AI cannot reliably handle 100% of cases, so human review is still needed.
