Instant IDP Discount, IDP Test Free

IDP test materials are famous for instant access to download. And you can obtain the download link and password within ten minutes, so that you can start your learning as quickly as possible. IDP exam dumps are verified by professional experts, and they possess the professional knowledge for the exam, therefore you can use them at ease. In order to let you know the latest information for the exam, we offer you free update for one year, and our system will send the latest version for IDP Exam Dumps to your email automatically.

By using our IDP exam braindumps, it will be your habitual act to learn something with efficiency. With the cumulative effort over the past years, our IDP study guide has made great progress with passing rate up to 98 to 100 percent among the market. A lot of professional experts concentrate to making our IDP Preparation materials by compiling the content so they have gained reputation in the market for their proficiency and dedication.

Free PDF 2026 CrowdStrike IDP: Professional Instant CrowdStrike Certified Identity Specialist(CCIS) Exam Discount

What was your original intention of choosing a product? I believe that you must have something you want to get. IDP exam materials allow you to have greater protection on your dreams. This is due to the high passing rate of our IDP study questions which is high as

98% to 100%. And our IDP exam questions own a high quality which is easy to understand and practice. At the same time, our price is charming. Just come and buy it!

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	• Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.
Topic 2	• Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 3	• Threat Hunting and Investigation: Focuses on identity-based detections and incidents, investigation pivots, incident trees, detection evolution, filtering, managing exclusions and exceptions, and risk types.
Topic 4	• Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.
Topic 5	• GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.
Topic 6	• Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23
The events are excluded by default while Low, Medium, and High detections are visible.

- A. Informational
- B. Indiscrete
- C. Inferior
- D. Internal

Answer: A

Explanation:
In Falcon Identity Protection,Informationaldetections represent low-impact events that provide context but do not indicate elevated identity risk. According to the CCIS curriculum,Informational events are excluded by defaultfrom standard detection views to reduce noise and allow analysts to focus on higher-risk activity.
By default,Low, Medium, and High severity detections remain visible, as these contribute directly to identity risk scoring, incident formation, and investigative workflows. Informational detections can still be viewed if filters are adjusted, but they are intentionally hidden in default views.
This design supports efficient threat triage by prioritizing detections that are more likely to represent real security concerns. The other options listed are not valid detection severity classifications within Falcon Identity Protection.
Because Informational events are excluded by default while higher-severity detections remain visible,Option Ais the correct and verified answer.

NEW QUESTION # 24
Within which Identity Protection menu would an administrator enableAuthentication Traffic Inspection (ATI)for a domain?

- A. Configure > Settings
- B. Enforce > Policy Rules

- C. Configure > Identity Configuration Policies
- D. Enforce > Policy Settings

Answer: C

Explanation:
Authentication Traffic Inspection (ATI) is enabled throughIdentity Configuration Policies, which define how the Falcon sensor captures and inspects identity-related network traffic. According to the CCIS documentation, ATI configuration is performed underConfigure > Identity Configuration Policies.
These policies allow administrators to specify which authentication protocols are inspected, which domain controllers are covered, and how identity telemetry is collected. This configuration step is mandatory to enable identity visibility and detection capabilities.
The Enforce menu is used for policy rules and automated actions, not traffic inspection. General settings do not control sensor inspection behavior. Because ATI directly affects sensor data capture, it is managed exclusively through Identity Configuration Policies.
Therefore,Option Dis the correct and verified answer.

NEW QUESTION # 25
When an endpoint that has not been used in the last90 daysbecomes active, a detection forUse of Stale Endpointis reported.

- A. 30 days
- B. 60 days
- C. 90 days
- D. 180 days

Answer: C

Explanation:
Falcon Identity Protection identifiesstale endpointsas systems that have not authenticated or shown activity for an extended period and then suddenly become active. According to the CCIS curriculum, an endpoint that has been inactive for90 daysand then resumes activity will trigger aUse of Stale Endpointdetection.
This detection is important because attackers frequently exploit dormant or forgotten systems to re-enter environments, evade monitoring, or move laterally. A long period of inactivity followed by sudden authentication activity is considered a strong identity risk signal.
The 90-day threshold is used to establish a reliable inactivity baseline while minimizing false positives.
Shorter timeframes could incorrectly flag normal usage patterns, while longer timeframes could delay detection of genuine threats.
Because Falcon explicitly defines stale endpoint activity using a90-day inactivity window,Option Bis the correct answer.

NEW QUESTION # 26
How should a user be classified if one requires observation for potential risk to the business?

- A. Marked User
- B. Honeytoken Account
- C. Watched User
- D. High Risk

Answer: C

Explanation:
Within Falcon Identity Protection, aWatched Useris a user explicitly designated forheightened monitoring due to potential business risk. According to the CCIS curriculum, watchlists are designed to provide additional visibility into users whose behavior, access level, or role may warrant closer observation, even if they have not yet exhibited confirmed malicious activity.
Watched Users may include executives, administrators, users with access to sensitive systems, or accounts suspected of being targeted. Placing a user on a watchlist does not imply compromise; instead, it ensures their activity is prioritized in investigations, detections, and dashboards.
The other options are incorrect:
* Honeytoken Accountsare decoy accounts designed to detect malicious usage.
* High Riskis a calculated risk state, not a monitoring classification.
* Marked Useris not a valid Falcon Identity Protection classification.
Because the CCIS material explicitly identifiesWatched Usersas accounts requiring observation for potential risk,Option Cis the

correct and verified answer.

NEW QUESTION # 27
Which menu option isNOTincluded in Falcon Identity Threat Detection (ITD)?

- A. Policy Rules
- B. Settings
- C. Event Analysis
- D. Privileged Identities

Answer: A

Explanation:
Falcon Identity Threat Detection (ITD) providesvisibility, analytics, and detectionof identity-based threats but doesnot include enforcement capabilities. According to the CCIS curriculum, ITD customers have access to investigative and analytical features such asEvent Analysis,Privileged Identities, and relevant Settingsfor visibility and monitoring.
Policy Rules, however, are part ofIdentity Threat Protection (ITP)and reside in theEnforcesection of the Falcon console. Policy Rules enable automated responses and enforcement actions, such as blocking access or enforcing MFA, which are not available under ITD-only subscriptions.
This distinction is critical in the CCIS material:
* ITD = Detect and analyze identity threats
* ITP = Detect + enforce policy actions
Because ITD does not include enforcement functionality,Policy Rules are not available, makingOption Dthe correct answer.

NEW QUESTION # 28
.....

When you grasp the key points to attend the IDP exam, nothing will be difficult for you anymore. Our professional experts are good at compiling the IDP training guide with the most important information. They have been in this career for over ten years, and they know every detail about the IDP Exam no matter on the content but also on the displays. Believe in our IDP practice braindumps, and your success is 100% guaranteed!
